4624. AF2Y: Hypocrite!

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-18 00:00:00 UTC
From: Quux <crouchingllama@netscape.net>
Message-ID: <034f8c93.5b62159d@usw-ex0101-007.remarq.com>
Source record: 110820

Everyone's buddy, AF2Y makes it public when he receives an email
that he finds offensive (read: One he can't respond to
intelligently,
so he nitpicks out the cusswords, etc.)

HOWEVER, it's OK for him to insult others via private email. Take
a look here:

Date:Thu, 18 May 00 08:15AM CDT
From:"radiosigs@mindspring.com" <radiosigs@mindspring.com>
To:"Osama/bin/login" <crouchingllama@netscape.net>
Subject:Re: YOU first!
>>From: Osama/bin/login <crouchingllama@netscape.net>
>>Newsgroups: rec.radio.amateur.misc
>>Date: Wed, May 17, 2000, 11:07 PM
>>
>>Proposition:
>>ALL people who are against gun ownership, or are
pro-registration, or
>>who are anti-2nd Amendment, etc., etc., etc., should do this:

><<<<<<Once again we have the hallucinations of a self proclaimed
>"crouchling."
Count that as childish, uneducated response and hypocrite example
#1

>Look idiot,
Count that as childish, uneducated response and hypocrite example
#2

>anyone pro gun registration and licensing is not automatically
against
>the 2nd Amendment.
Actually, historically speaking, AND taking into account CURRENT
action, _YES_ THIS IS WHAT IS HAPPENING! Open your eyes.

"Automatically?" If I decide to protect my home with a gun, I am
"Automatically" classified as the problem. Ask Rosie and Gore,
the
inventor of the electron. Really, he did. Air, too. Smart guy.

>That's the problem with you stupid
Count that as childish, uneducated response and hypocrite example
#3

>rightwing reactionaries-YOU GENERALIZE which is clear cut
bigotry!

Now, if I like the idea of self-protection, I am LABELED in a
NEGATIVE
manner as a "rightwing reactionary". Also, "GENERALIZE"?
Registration
of all guns is as much of a "GENERALIZE"ation as you can get!

>Be specific if you know what that means.
Another insult.
I _WAS_ specific. Put _YOUR_ ass on the line to _PROVE_ _YOUR_
theory.
NOT MINE! If you need _MORE_ specificity, I'll personally make
it
clear to the criminals that _YOU_ are an easy and voluntary
target.

>Debating and even dissension is AMERICAN-it's what sets us aside
from
>dung countries whose secret police interpret any and all
questions about
>goverment, law, procedures as contrary to state policy and
deserving of
>punishment.
Nice speech, but you're telling me that debate, etc. is AMERICAN,
yet in
the same breath, you insult and retaliate towards anyone who
disagrees.
Moreover, NOBODY can offend you in YOUR INBOX, but what you've
wriiten
into mine is justified? Hmmm...hypocritical double-standard...

Count that as childish, uneducated response and hypocrite example
#4

>I am a person who is very much in favor of retaining, as is,
>the 2nd Amendment regarding private ownership of guns
Then WAKE UP and realize tha EVERY TIME there has been
REGISTRATION, that
WHOLESALE CONFISCATION followed EVERY TIME. You say you're "very
much in
favor of retaining", but your current mindset will NOT RETAIN.
Furthermore,
as you say "as is", this is hypocritical since you CANNOT
"retain...as is"
by CHANGING IT! Think!

Again, hypocrisy. You say one thing, and you actions create a
different situation.

Count that as an uneducated response and hypocrite example #5

>however this business about militias must change. The only
state's

>armies should be the National Guard...period.
So my (if I choose to have one) weapon creates rogue militias? That's
a far cry. I agree that an active and concentrated movement with a
self-serving agenda is a Bad Thing. But how many situations such as
the Waco incident arise out of a lack of registered guns? Ruby Ridge
was a Federally-sanctioned murder.

One of the "checks-and-balances" of this country is an armed populace.
Go study Lincoln. It's all there.

>No NRA is going to run my life and the government is going to see to that.
But it's OK if 750,000 moms led by a CBS publicist and extended family member
to Hillary's #1 ear-bender is OK to "run MY life'? You watch waaaay too much
television.

Got a tip: TV and printed media is not the truth. I used to work in professional
television. Satellite operations, too. Raw newsfeeds are only a port to reality.
Edited, and massaged programs are probably close to 30% or less actual reality
content. I've seen white men shot to death, laying on the ground...their final
seconds of life...the fear...the helplessness...close ups of their eyes...gunman
threatens cameraman, he runs, but turns back around, zooms in to catch it all,
risking his very life...and then the government/media "decides" how to tell the
story, how to create (lie) about what happened, only the "filted" footage gets
through. I see the raw footage, and I see the end story. Not much in common.

TV cameras can only catch one point of view, and generally don't lie, but they
are limited to their view. Editors and producers and advertisers create the lie.
Audiences BUY IT because "they saw it on TV". Your million mom march, while a valid
complaint, is still ONE FACET, not a panacea to solve the problem.

It is seemingly more and more fashionable for the media to sell
you one side. I
still believe they should be OBLIGATED to tell BOTH sides, but
hey, we're a nation
of no responsibility...

>Charlton Heston is an old toupee- wearing Moses who left his
brains floating in
>the Red Sea. To think that that creep once represented a man who
spoke to God is
>reprehensible.
You say this name-calling now. But wait until your home is
invaded, and your family
is sytematically raped and tortured by illiterate, uneducated,
no-remorse thugs.
Watch your family get raped hour after hour, and then murdered.
Somehow you or
another member survives. I want Rosie O'Donnell to personally be
responsible for
all in America who are the survivors and the victims. Personally.

Communication in this country can be a great thing.
Unfortunately, the only way to
communicate with many people is at gunpoint. They claim they
didn't know it was their
house. But the fact that they used a crowbar to enter, didn't
recognize any of the
items they took, didn't clue into the fact that something was
wrong when they had to
beat the Holy Shiite out of the mother and daughter just so they
would allow penetration,
shot the husband because he had the nerve to object, etc.
,etc.,.....

Time for humor:
I remember watching COPS or some show similar. These detectives
had placed a trap in a high-
crime area by leaving a car with a video camera and remote-engine
killer in it. They nabbed
a few guys, but this one gets past the lock, hotwires it, and
proceeds to drive off. A few
seconds later, they kill the motor, and the criminal tries again
and again to restrat the car.
He reaches a point where he panics, realizing he needs to bail
out, but the cops had also
rigged up the locks so when the engine was killed, all doors
would lock, and not be able
to be unlocked from inside. They approach him, all the while he's
saying out loud "damn!...
damn!...damn!...damn!...damn!...damn!...damn!...damn!...damn!...d
amn!...damn!...damn!..."
When they open the door, first thing out of his mouth is:

"I had nothin' to do with this!"

Only way to communicate with these dickheads is a loaded weapon,
cocked, finger on the trigger,
and a license to kill. Anything else, they don't take as serious.

YOU are a criminal's wet dream. Good freakin' luck!

4625. AF2Y gets technical

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-18 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <8g1o4c$5fv$1@slb2.atl.mindspring.net>
Source record: 110821

I use a PowerPC Mac with an external Best Data 56K modem and have been noticing too many connection failures which have been unrelated to my ISP. And so I called MindSpring, talked to a tech who had me open Gearbox and go to MANAGE active set.
My modem settings were:
1. Generic 56K
2. Initialization string AT&F
3. Speed 57,600
4. Flow control CTS
He had me change the INIT. STRING to AT&F+MS=V34 and he happened to mention that BEST DATA uses a ROCKWELL chip.

This turned out to be a complete failure since the MAC rejected that initialization string altogether and it was then changed to AT&F+MS=11,0.

This time I was able to log on but everything slowed down to a crawl. In fact, the the STOCKQUOTE.COM home page didn't load which wasn't too bad since NASDAQ was down 100 points anyway and why add insult to injury?

Remembering what he said about a Rockwell chip being in a Best Data modem I decided to experiment. I went back to my modem selection and just for the hell of it opened the drop down window to show ROCKWELL and I entered it as my choice. I then clicked on DEFAULT and for that Rockwell selection, up came goofy settings such as a PORT SPEED of 115,200 kbps; an initialization string of AT&FEO&DOW2&K3&Q5 and FLOW CONTROL of CTS & RTS(DTR).

Now with all these hazerei schweinerei numbers which looked as if they came out of a George Lucas silly space flick, I tried to get online again and holy smokes.....DYNAMITE RESULTS. Faster than a speeding bullet. My MAC's speed, if compared to a PC, WAS about 100-120 mHz but these bizarre settings seemed to have doubled it.

What I'm driving at it this. A year ago I didn't know what a mouse was except for being a rodent like Tolassi. Obviously I have become a genius and anyone out there who is baffled by computers and ham radio theory-take heart. Without a doubt you're not as smart as I; that's a given, but perserverence and determination with a litle bit of luck can pay off handsomely. And if you think you're gonna get rich investing in the NASDAQ, you're nuts. I doubt if it'll reach it's high of 5,000 for five years or more, if ever, due to the interest hike yesterday and the one to come in late June. This hot economy will cool to ward off an inflationary spiral and with it, the value of tech stocks will level off,

---
Take your money out of NASDAQ and put it into a portfolio of solid companies

on the NYSE, AMEX and put some into the money market as well as tax free municipal bonds. I did just that with my all of my $550 in savings. Whoopee!
AF2Y, Doc

Message-ID: <8g1piu$7re$1@slb6.atl.mindspring.net>
Source record: 110823

Gosh I feel awful the way I've been lambasting Tim and I'm going to remove my mail block too. I've liked that guy ever since I met up with him on this board and this political stuff has created animosity. Apparently we're both pigheaded guys who see things quite the opposite on the gun issue and I asked myself why jerks like Heston and LaPierre should be allowed to create such a breach? However Tim should understand that I run with the crowd ONLY when the crowd is RIGHT and I consider it WRONG and I have a perfect right to express my opinion because I know that Republicans just plain suck. They've become a party of uncaring rightwing goofballs led around by the noses by militia screwballs, Christian Coaltion meatheads, the worst womanizing hypocrites to ever sit on Capitol Hill and gun-loving rectal orifices. No wonder a top flight jerk like Gewt Ningrich left town in a hurry never to be heard of again. And those creeps who led the impeachment proceedings against Bill Clinton were nothing but low class, scum- sucking imbeciles themselves. I can't help it Tim; it's just the way I see politics and you're backing bums but you are not one yourself-I don't think. I mean I don't know it for a fact but you've never told anyone what you did for a living or your age or if you had a family. For all I know you could be a Jersey mobster out there in a witness protection program. You're like a mystery man living in the most exciting city in the U.S.A.(and I don't mean Youngstown, Ohio and Roanoke, VA which are the worst I've ever been in). Tim's a Las Vegas guy which puts him on TOP. And so Tim, if I came on too strong and hurt your feelings, I feel terribly and here's my handshake via cyberspace. Just try to understand that I WAS a 100% Independent who became so disallusioned with the Republican Party(except for John McCain) that I wouldn't consider voting for Mr. Bush for Prez. I'm a Libran who favors balance and the Republican garbage loose in this nation has tipped the scale to the depth or height of obnoxiousness depending on how you see it.
Sincere 73,
Doc,AF2Y

That's going to be difficult since birthday information is no longer part of the publically available database.....

However, one can go through the database and compute an average age of those who do have birthday information and simply count those who don't. However, to eliminate the silent keys, then go to the Social Security Death Index and remove those found there. It won't be perfect, but it can be done.

I've heard that the average, the last time it was computed, was in the mid 50's.

Back in the good/bad old days, it took up to three months from the
time one was tested at an FCC office, to the arrival of the license
in the mail. That three-month period was a good time to listen, listen,
and listen some more to learn the procedures, build some equipment,
set up the station, and read some books.

>
>is anyone familiar with this hamfest on 20 may? is it worth driving 5
>hours to?
>thanks

It's a decent hamfest, but five hours would be too much. To drive that far you need a fest like Shelby (B-I-G), or the Frost Fest in Richmond (the only game going in the dead of winter--and yes, it's held indoors).

I would drive the following times for hamfests as follows:

Charlotte 2.5 hours. (Has been declining in quality in recent years, and the $5 parking is a bummer).

Raleigh 3.5 hours. All indoors, very well managed, and usually some interesting forums. (Riley Hollingsworth this year). LOTS of dealers.

Benson. 2 hours. Small, but packed with bargins. Flea Market usually excellent. Good food, also.

Durham. 2.5 hours.

Kinston. 1.5 hours. Small, but the home folks are SO nice!

For simplicity, use this formula:
Driving time (one way) should not exceed the time necessary to see everything at the hamfest. (Yes, you can do Shelby in five hours if you keep moving.)

Applying this formula to Dayton, you will see why folks will drive for two days or more to attend.

73,

QRM

More Guns, Less Crime (read it Mitch)
by John R. Lott, Jr., University of Chicago Press
Does allowing people to own and carry concealed firearms really deter violent crime? Or does it simply cause more citizens to harm each other? In this important study, legal scholar John Lott presents the most rigorously comprehensive data ever compiled on crime in America. After meticulously analyzing the effects of gun control laws, among many other variables, on crime rates, Lott reaches the conclusion: Where there are more guns, there is less crime.

>>>radio is less, or anything else). Many ham operators are adding
>>>computers to their radio room, not replacing their radio rooms with
>>>computer rooms.
>>
>>Well said. One misconception of some people (IMHO) is
>>that ham radio must compete with other interest areas.
>
> It must compete to at least some extent. Ham radio for example

>must compete for funding for example, we are mostly people with a
>least SOME limits on resuorces

True to a point and it varies considerably.
Some people may only have sufficient discretionary
income to do ham purchases and nothing else
from a hobby perspective. Others have greater latitude.
The point is that ham radio does NOT need to try
and outsell itself over other interests. Yes, some
can only afford one interest, but that certainly
isn't all.

>>The fact is that people often have multiple interests and
>>they just vary in their approach to different ones. I am

OK, lets cut to the chase, stop beating around the bush, stirring up a bunch of dust, and muddying the waters with a bunch of baffling B.S.

Proposition:
ALL people who are against gun ownership, or are pro-registration, or who are anti-2nd Amendment, etc., etc., etc., should do this:

In extremely visible ways, have indicators such as:
o) signs
o) stickers
o) notations in the phone book next to your addresses
o) bumper stickers
o) T-Shirts, caps, etc...
o) spray-painted curbs
o) Tatoos (hey, it's a free country, go ahead, express yourself!)
o) any other undeniable markation of their lack of protection

On their vehicles, homes, foreheads...whatever;

That state they are plump, juicy, feeble, easy, pacifist, unprotected, unarmed, non-lethal, free-for-the-taking targets for any gun-toting criminal.

We'll use _YOU_ for this experiment, _NOT ME_ to prove why _YOU_ should alter what protection _I ALREADY HAVE AS A RIGHT_. Put your money (and ass!) where your mouth is.

Gamble with _YOUR_ lives, wives, children, and toiled-for property.

NOT MINE!

I'll start the website to compile the list. Any non-conformance will be handled as a criminal offense. If you vote anti-gun, you must show loud and clear indication that you are a willing target for crime.

Doc, you first...we're waiting....

Oh so now the dumb sob wants to make carrying an "unlicened" weapon a crime.
Never mind the Second Amendment, never mind that you paid a hefty price for the
weapon, never mind that the founding fathers of this country fought for the
freedom he wants to restrict, never mind the fact that you purchased it
legally, all he wants (like the commies) is that every one able to get a
license do so. What about the criminals charlie - what would you have them do?
Only the law abiding would get a license, what a liberal whacko !
How about crime and criminals charlie.
How Would Licensing and Registration REDUCE Crime? Hmmm.

Bummer! I just looked at Radio Shack at a dual band Hand Held. It was $220 bucks or thereabouts. It only had an output of 700 mW when using the 3AA batteries it requires.. It did go to 1.5W when a DC 6.0V external Power Supply is used. I kinda liked the radio but now it looks like it may be too weak? I see that Kenwood has a couple dual-banders with higher output power, but they cost about twice as much. I guess you DO get what you pay for! I'll either give the cheaper RS model a try, or save for a while and go for the Kenwood. A plus with RS is they have two stores in town. There's not a Kenwood dealer within 100 miles of here.

Hello folks!!
Just wanted to let everyone know that there has been major improvements to
the world wide voice & Text chat system for hams!! There is now the
provision for private chat rooms. The idea is that you wait for someone to
arrive in the main chat then go to a private chat with them if you wish. The
audio in the system rivals that of anything currently available and also
supports a text chat on the same screen. Use the system to set up skeds,
check the muf on a freq, meet new hams, have meetings or just plain ragchew.
Go to the url here to directly enter the chat
http://home.earthlink.net/~mitbr/AmateurRadioChat.htm
If no ones there when you arrive simply hang around for awhile while you
surf the net some one will come along!! Spread the word folks .

Grant and Tammy,
Good! I hope you get interested enough to start on
a license study. You might try looking at the ARRL, and
the W5YI web sites. They should have loads of stuff to
get you started. I don't have the URL for either of those
sites, but a search engine should get them for your. You
might also brows around in Radio Shack, they have some books
too. Hit the magazine racks in one of the bigger book
stores, look for 'CQ', '73', 'World Radio', etc. You may
not understand everything you read, but it sorta 'soaks-in'
after a while. Good luck, and hope to hear you on the air.
'Doc

Okay, Rick, I never disputed that in my message. All I said is that "militia" is just one justification for "the people" to own guns, but it is not the only reason "the people" can own a firearm.

The writers of the amendment did not feel they had to list every justification for the amendment. Since hunting, self-defense, and other uses, were commonplace at the time, there was no reason to list those things in the amendment - they were obvious uses of a gun.

Is that Al Lewis from "The Munsters?" All of us Giuliani lovers are heartsick over what's going on. Hillary is one obnoxious broad-a carpetbagger if there ever was one who comes to our area and knows how to "solve every problem." It's a joke and these damn naive Democrats up here buy all her bullsnot. As far as I'm concerned she's an insult to a great Party and unworthy of a Senate seat anywhere.
What kind of a woman sits idly by and grins as her husband gets "Monickered" in the Oral Office? A woman who has greedy ambitions; one without scruples and N.Y.Dems fall for it. But look at Rudy's cross to bear. He's a decent honest but philandering man who fell into disfavor because of adultery even though Donna Hanover seems like a cranky bitch. He won't definitely commit to the Senate race due to prostate cancer and as he sits and ponders medical procedures, that thing could spread and kill him. It's a mess. My hunch? He's going to undergo surgery as the right course of action-recuperate as did Joe Torre-get back in the race in the summer and send that Arkansas hillbillyess packing in November. That is, we who care about the welfare of New York, HOPE this is the scenario. If Rick Lasio or Lazio runs against Hillary, she'll win. By the way Rudy is NOT a run of the mill Republican halfwit the kind of which has been screwing up things for years. He's a tireless, compassionate, strongwilled but cooperative, no nonsense guy who's a credit to the Party and probabaly the best mayor NYC has ever had since Fiorello LaGuardia.Show me a tough intelligent Italian, Republican or Democrat, and I'll show you a great politician.
Doc,AF2Y

Opinions vary. Doc's rather humorous replies/posts always make my
day.
It IS rather funny that Al Lewis is running for Senate, just like
when the late Sonny Bono ran for Congress. You have to consider
their past, and one thing I find funny is Cheech Marin playing a
cop on "Nash Bridges." Considering his past with Tommy Chong.
"Let's make a dope deal!" LOL!!!!

Oh, it's DEFINITELY not an apology, but more of a clarification
in order to keep things from being twisted into something that
is not.

This guy hides behind any technicality, no matter how small (as
in a cuss word, or spelling/typo), even IMAGINARY technicalities,
so he can put up a smokescreen or diversion, and turn the focus
away from himself.

If anything, I should be contacting Mindspring about his abuse
in MY inbox! But that's not my goal. Just trying to show that
there's more to this issue than the media (and the lemmings) will
want to discuss.

Thanks for your [sane!] input, Wufu. =)

Right.

Senator Mike Crapo (R-ID) has a bill to require the FCC to compensate
amateur radio with like frequencies for any taken. S.2183 read on
March 6, 2000, titled `Amateur Radio Spectrum Protection Act of 1999'.

Similar bill in the house, H.R. 783.

You can find them from http://www.senate.gov/

Please contact your senators and representatives and ask
for their support.

Ramsay,

Your first step would be to contact someone at one of the local clubs - for example the Schenectady Amateur Radio Assiciation (SARA - contact: Ron, KR2L), the Schenectady Museum Amateur Radio Association (SMARA - contact ?) or the Troy Amateur Radio Association (TARA - contact Bill Eddy - NY2U). You should look around for a 2m or dual-band hand-held radio so you can get on the local repeaters and check out when the club meetings are going to be held. Lots of deals are available via hamfests or flea markets at club meetings, but you might also want to look into one of the R/S HT 202's if you can find one. I would recommend against a "low power" handheld (0.5 - 1 watt) for a first radio - they can lead to some frustration. Get something with 2-5 watts of output power and the capability for using an external mic and antenna for future expansion. In the Albany-Schenectady-Troy region, you will not be very limited if you get a 2m-only rig, since most of the action is on that band. The people that you will meet are a very friendly bunch - try the SARA repeater on 147.06 or the TARA repeater on 145.17 and just ask about things. This is what I did a couple of years ago, and it's been a lot of fun since then. Pick up an ARRL Repeater Guide for more information about local machines.

Source record: 110766

If you're talking about the "CLN" website, don't let the "Rachel" alias fool you, people. It's almost certainly a penname. Note the link to the CLN site on "The KJI Show" site. Then note the similarities of verbal and graphic style of the 2 (a same or similar picture of "KJI" appears on both). Young sociology major "Rachel," who has had almost no contact with ham radio, couldn't likely have the background or knowledge of specific details to do the CLN page. Also, all the "SWL letters" are bogus. I'll bet this is the work of a certain frustrated frequency dictator on Long Island (well known a bit up the band) taking out his feelings on those who've upstaged him!

"Rachel," by the way, was introduced to the CLN QSO by an individual identified only as "Tom" (not CLN), who was using a bootleg callsign at the time. The REAL licensee of the callsign was contacted via landline and he never heard of "Tom" or "Rachel."

Welcome to the hobby! Someone threw out field day. That is
a very good way to see a lot of different stuff. Try to find
a club that is going to have a lot of different stations.

Also unless you are wealthy you may want to think about upgrading
quickly. New hams some times sink a lot of money into VHF stuff
that doesn't get much uses after they upgrade. I know I did!
For example I have an ICOM 2800 which I use every day, but it
really isn't any better than working off of one that cost half
that. Just nice eye candy.

You may also want to check out MARS

Hi,

I have bought ALINCO DJ-480T (UHF) the same is DJ-180T but works on VHF. The rig has been set to work on preselected chanels only. I'd like to change the mode to VFO. Any idea how to do it ?

Regards,

Dragan

4690. Movie "Frequency" observations

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-19 00:00:00 UTC
From: mikebo@Mars.mcs.net
Message-ID: <8g4dka$10jo$1@Mars.mcs.net>
Source record: 110771

Contrary to what I thought I was hearing about this movie, comments
about ham radio made by the older "Chief" character in the movie
"Frequency" are anything but positive...

When he's dusting off the old man's radio in front of his son, he
says, "Noone uses these things anymore - they're obsolete."

Then, when he starts talking to someone (who turns out to be his dad),
he says, "You must be real old-timer." Then notice as he tunes around
the band and there's nothing but static.

The implications are that ham radio is dead, and you'd have to be an
old fart to enjoy something as archaic as HF radio. What a bummer of
a message to send to younger viewers.

As the film unfolds, you (should) realize what the main characters
realize... that is, the radio isn't actually being used at all...
The radio is simply a focal point through which the words flow.
It's more a magical than a technological plot device.
The son realizes that he doesn't have to press the PTT switch on
the mic (reinforced by some double takes), and later in the movie
they're both just leaning toward towards the radio, or just
shouting into the room. Anyone else notice this?

BTW, anyone recognize the antenna? A strange looking beast for sure.

Mike,
I saw that awful flick several weeks ago and had the popcorn not been so good, I would have walked out. It was one of the worst movies I ever saw and I warned the guys, right on this board, about it. But most are so goddamned stupid, they wouldn't know the difference between a plot and a pot.

Anyone know Russian? The word for COMRADE is TOVARICH. What would be the plural, TOVARICHEM or TOVARICHI? In undergrad school I had a professor of American lit who was a card carrying commie. His name was Willen if I remember correctly. He taught us, for example, "Sister Carrie" from the dialectic viewpoint stressing how capitalism exploited child labor. It was the first time I had been exposed to a different political and ideological philosophy which was fascinating. For anyone who thought that Russia was communist, think again. They STROVE for communism but never made it. Instead they forced their populace to live under STATE CAPITALISM which was as totalitarian as FACISM or NAZISM under Hitler. I never will understand why two similar bastards like Hitler and Stalin despised one another. Each put the state before the man and destroyed the dignity of those they ruled yet if it were not for such mutual hatred, we would be living in the revival of the Dark Ages once again. Western civilization would have been destroyed by Adolf because his ultimate goal was to usurp the power of Jesus by first destroying those who gave him to the world. I don't mean to be a pedagogue since I don't know what it means anyway.

There's been several rulings on this fellas and in all it has been deemed an "individual" right.
Also for your enlightenment you should read the Federalist papers (contains 85 essays by the framers), and/or the Second Amendment primer(contains more). It is perfectly obvious what the framers wanted, for whom, and why.
Anyone with more than two brains cells knows it although some just won't accept it.

>> pay special attention to paragraphs (b), (c), and (d).)

>I don't see that the FCC paid any "special attention" to (b), (c) and (d).

I don't see an "or" between any of the five principles. This isn't
Chinese take-out where we get to pick and choose which principles we
abide by. I suppose if amateur radio was a hobby, it wouldn't matter
if anyone abided by any of the five principles, but as a government
radio service, each of us needs to attempt to fully abide by the
"fundamental purpose" for our existence.

>Most amateurs do not contribute to the Service equally in the operating and
>technical arenas, nor is it necessary that they do.

In your opinion, of course. Luckily, we answer to the FCC, not any
individual licensee.

>Collectively, the
>Service meets its objectives, which I assume is quite acceptable to those
>who write the rules.

I respect your opinion on this matter, but I believe you're incorrect
in asserting that just the service as a whole needs to meets the
principles of 97.1. Taking such a stance means you're opening the
door to the (possibly remote) chance that one or more of the principles
might be ignored by all. From what you've said, you apparently would see
nothing wrong with that.

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:
(a) Recognition and enhancement of the value of the amateur service to
the public as a voluntary noncommercial communication service,
particularly with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to
contribute to the advancement of the radio art.

(c) Encouragement and improvement of the amateur service through rules
which provide for advancing skills in both the communications and
technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service
of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

Or longer.... The shortest time I had to wait was 4 months, back in 1992. The other times were even longer, but that was before the FCC mandated VEC electronic filing.

It should be obvious to anyone who's not a bleeding heart liberal that one of the purposes of the Second Amendment is so that the PEOPLE have a check (as in "check and balance") on the government - similar to how our founding fathers had their "check" towards King George back in 1776. It's to maintain and ensure that the POWER is in the people, not that the government rules over its populace.

Other than the fact that practically every Southern California repeater owner is armed, what does this have to do with amateur radio? That's not even covered under the same Amendment!

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr23_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr23_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr23_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

73 es agbp de Frank (DL1YDL), DL-CW-C #030

But, like many others who has read this thread, you added your two
cents worth. As ham operators, we don't live in a vacuum. These things
affect us also, so we have opinions on them. Perhaps it is not "proper"
to discuss those opinions in this newsgroup, but since when have
Americans been that proper?

my point was that since people *will* attempt to pass the test by memorizing the answers, the questions should be ones that are 'worthwhile' and 'memorable' and 'useful'.

i don't disagree with your 'driving test' suggestion. it would take some serious work to create it because of the difficulty of having a 'standard test' to be used by 'random' testers. however, it should solve the problem we have seen with new hams (and newly-upgraded ones) not really knowing the ettiquette and operating rules - which reminds me that i have to tell a new ham (for whom i'm the default elmer) that saying "are you out there" is not really appropriate....

To counter your argument, let's look at the written test of 1912;
you'll note it's more of a "graduation exam" rather than an
"entrance exam":

One had to be knowledgeable of the International Radio-telegraphic
Convention in force and Sections 3, 4, 5, and 7 of the Act of Congress
of August 13, 1912;

One also had to take a seven-question written exam covering:

1. How to make a diagram of the transmitting and receiving apparatus
2. How the transmitting apparatus is made and how it works
3. How the receiving apparatus is made and how it works
4. The International regulations for wireless communications and
the U.S. wireless laws and regulations.

(Taken from The Book Of Wireless, Frederick Collins, 1915)

That written exam was an essay-type test. As the government examiners
were fond of saying back then, "What you fail to say, you don't know."

Too bad the militia only includes males between the ages of 17 and 44
as per the US Code. I know he feels bad about being kicked out of
the militia due to old age, but pilots have to retire in their prime,
too.

Have you read the history books? Have you seen how many governments have went bad over the history of mankind? We're not talking about one or two. We're not talking about a few dozen. We're talking about hundreds (even thousands).

And, when these governments go bad, history has shown what happens to the common man - the abuse over the years has been incredible. And the abuse was not stopped until the people were able to gain enough power to finally get rid of that government.

Since it has happened to all those other governments, you're a damn fool if you think even for a moment that it cannot happen to this government. And only an armed population, fanatical about keeping government under control, can prevent it.

This country's forefathers knew that, which is why they were careful to make sure that the government of this country could not so easily disarm its citizens. But it is only the people who can keep government from changing that situation.

Sadly, too many people (such as yourself), are falling for the propaganda and are marching willingly into a world where the government has absolute power, with the citizens powerless to stop that government from doing absolutely anything it wants.

God save America (from people like you).

>
> "You have questions, we have blank stares"

Oh, come on, John. You obviously missed the meaning of that slogan ("You've got questions. We've got answers."). The products are the answers, not anything the employee might say. Why do you think that phrase is on their product catalog?

They're talking about these types of questions...

...Have you got something that can play music?
...Do you sell ham radio equipment?
...Do you have a microphone for my radio?
...Can you show me a color television?

...to which the employee would answer, "Yes, let me show you..."

They never said they could answer every technical question that came along. In fact, they never even said that their employees even knew everything about every product they carry (look at the diversity of their product line).

While I'm not a big fan of some Radio Shack products, I think attacks like yours are a little silly. You call Radio Shack to answer a question that YOU don't know the answer to, and then you make fun of their employees because THEY don't know the answer. If they're stupid for not knowing the answer, what does that make you when you also don't know the answer?

4735. Re: High Voltage Probe Question

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-22 00:00:00 UTC
From: ma_locksmith <ma_locksmith@email.msn.com>
Message-ID: <OraEjo#w$GA.325@cpmsnbbsa07>
Source record: 110716
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

A high voltage probe is nothing more than a large value resistor that will withstand the high voltage. It is used to make a voltage divider based on the input resistance of the meter. If you use a 20 Mohm input meter, then the probe will work but read approximately twice what the value of voltage is. For a typical 100:1 divider, the meter input resistance is 10 Meg, the probe resistance is 990 Meg. This adds up to 1000 Meg to 10 Meg, or 100 to 1. The same probe in a 20 Meg meter ends up with 1010 Meg to 20 Meg or approximately 50 to 1.

The common input for multimeters is 20K ohms per volt. The only meters with higher input resistance are those that have internal amplifying electronics. If it's an analog meter, then it's probably 20 K. Look on the meter face, it is sometimes stated there.

I feel I should comment here to inject a word of safety. While
technically correct that a high voltage probe is nothing more than a
large value resistor, there are some other design considerations
which must be considered. Firstly, the insulation on the probe must
be able to withstand the voltages being measured. It's no fun to
have a flashover occur while you're holding the probe on a 30KV
circuit. Don't forget, too, that probes may get dirty or wet, and
that this can significantly reduce their voltage handling capacity.

Nextly, the high value resistor must be able to take the voltage
applied to it. Not all resistors can withstand high voltages, and
they may flashover or breakdown. If this occurs, the minimum damage
you can expect is to fry the meter (Worst case might be frying
yourself!). The power handling capability of the resistor probably
won't be a problem, but it would be good engineering practice to

work the equations to make sure of this.

Another concern involves the switching of the meter. If you're using an older style meter with a mechanical switch, what happens when you operate the switch? Is the input disconnected from one contact before making with another contact? What will be the voltage on the switch when the contacts break? Will this cause the switch to arc over?

Finally, if you're going to be measuring AC voltages with the probe, you'll have to consider the aspect of any capacitance associated with the meter, leads, or probes. 1000M of resistance can result in a significant RC circuit.

So, before attempting to construct your own high voltage probe, please spend a few minutes considering the failure modes possible and the consequences.

Dave

P.S. Standard Disclaimer: I work for them, but I don't speak for them.

I must say that this blowhard Windy or Windy blowhard tries hard to come across as a respectable writer but from what I see, he lacks verve, subtlety, humor and succinctness, so who can really take him seriously? Take for example the snippet of his in this posting. The first part beginning "Shucks,Doc" can be summed up by "Your postings are no more than the rehasing of old news/facts." It's that simple. What's with the 100 words he uses saying what I did in twelve?

If you read his drivel, all you'll see is an effort to impress by using fifty cent words when dimes will do. It's as if he wants to cover up his own inadequate and confused thought processes by confusing ours. Windy, I'm a meat and potatoes guy(notice how I spelled it compared to the great Dan Quayle) therefore I strive to impart basics without attempting to befuddle the reader, without trying to do a fancy "old soft shoe" routine and wave a magna cum laude diploma in their faces.

You fool nobody. All you are is an Al Bundy shoe salesman with probabaly a Peg bitch clawing at your shorts. And all because of my support for stricter gun laws? Damn, you are one ignorant clown, aren't you. Take for instance the news of yesterday. I think it was about two teens from Montclair, New Jersey, just 6 miles northwest of me, who got caught buying weapons over the Internet. Twenty one weapons I believe; I'll have to now read a newspaper online to get all the facts.

Do you realize what mayhem those bums could have wrought had it not been for super diligent surveillance and action by the feds? The Internet police? But no-if we had it your way along with the jerks who support you, guns on the Internet would be as readily available as innocuous collectibles on auction sites. What care you, dodo? It's HANDS OFF because guns are sacred? Oh yes, it's our sacred God given right to have as many as we want regardless of evil intentions or emotional problems that would prevent a buyer from going to a movie theater unaccompanied let alone possessing a weapon.

Jesus, Moses and all the other boys, you have to be one brainless dolt, Windbag. Can you imagine what this country would be like if we had more of you than more of me? More irresponsible crazy cowboys waving the Constitution instead of a level headed, clear thinking responsible citizens who cares both about the welfare of his fellow man and country?

To be quite frank, Windy, I've had enough of your idiocy on rec.radio and request you leave to spend more time in writing obscene sayings on mens' room walls. This is a forum for the elite, not the shleps and all you do is bring us all down to your level. Whether you like it or not, stricter gun laws will become a permanent part of this nation coupled with stricter Internet surveillance which I and millions more welcome and if you don't, then pack up and get out. It's a big world beyond the shores of the U.S.A.

I haven't seen the flick, but it seems like the bitter attitudes
displayed here in this discussion are part of the problem with HF
radio. Do you think that amplifying its faults and minimizing its
benefits is a good way to increase interest? Why not try to be a little
positive now and then?

4743. Ham radio's downward trend

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-22 00:00:00 UTC
From: tlbryant@my-deja.com
Message-ID: <8gc52g019i7@enews1.newsguy.com>
Source record: 110724
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

The question asked time and again is, "Why are there no *young* newcomers to ham radio?" The answer is quite simple: elitism.

The elitist mentality fosters itself when a group of people think that they're doing something "better" than someone else. It's not limited to one individual group. It's a disease that infects Christian fundamentalists, as well as teenagers who think they're "alternative". (You know the type. They walk into a CD store, sporting spiked, purple hair and facial piercings, and complain because the store doesn't have the entire discography of some obscure band from San Francisco who call themselves Blood Monster Mushrooms.)

This elitism makes the group irrational. The dangers of the elitist mindset are very real. First, it more than likely creates hypocrites out of the people involved. Second, it annihilates the appeal of the group's philosophy, as no one likes to be talked down to. Third, it turns the group into general assholes, making them snobby, confrontatinal, and unlikeable.

I've seen this attitude time and again in ham radio. It's seen in club meetings, at hamfests, on the air, and most prevalently on the internet. My idea of ham radio would be a wide range of individuals discussing many different topics, and engaging in a meaningful and intelligent exchange of information. (That certainly doesn't happen on the typical DX contact) However, that's asking for a Utopia that just isn't going to happen. Some will even say that this is against the fundamental purpose of the service as outlined in Part 97.1. These people can't even see past a rulebook to see that amateur radio has become stagnant.
But, no. The majority of hams today are old and/or obese, white, males who have nothing better to do than talk about the "good 'ol days", their health problems, and the weather.

Based on these facts, you can see that the new license structure isn't going to save ham radio. A lower code test requirement isn't going to save ham radio. Only a change of attitude will save ham radio. Until a redefining of the basis and purpose happens, and until the poisonous elitism is purged, the appeal of the internet for the free and open exchange of ideas will continue to grow, and interest in ham radio will continue to dwindle until it is like the dead languages of Europe: Still there for the curious, but of no common use.

Wow....EXTRA Class test question!

How many ohms do we put in parallel with the 20M ohm meter so it acts
like 10M ohms to calibrate the high voltage probe?

(Hint: Two 20M ohm resistors in PARALLEL equals 10M ohms.)

I don't think so. If that were the case, they would be dropping out *after* getting the license and going on the air (to be allegedly snubbed). The real reason is that there are many more technical activities these days for teenagers that don't require any code or license. If there was an Internet and computers in 1957 when I was a teenager, I likely wouldn't be a ham today...

>The majority of hams today are old and/or obese, white, males who have

The elite person you complain about might think he was better than these old hams. He might write a post complaining about their physical looks, their race, and their on the air content...

I like your post however aren't you equating elitism with that of a basic
superiority complex? If so I don't see it as the force driving youngsters
away from ham radio.
Think of it this way. If there were no Internet, what would be happening to
the personal communications industry? GROWTH on both CB and ham radio. In
other words I can try to rationalize the stagnation in ham radio by using
quite a lot of excuses but there is but one that's significant and just one
that will ultimately render this hobby spent. We're on it right now.
Who said, "There's nothing more powerful than an idea whose time has come?"
It's tough to admit but it looks as if computers are supplanting
transceivers; its time has come and it's just the beginning. Moreover once
it becomes more and more enticing to use voice communications online, then
ham radio will pack it in altogether and the FCC will be able to sell our
bands to the commercial interests they've had lined up for quite a while.
Is there a good point to all this? Most certainly. Whether one uses his
computer for just surfing the web or for that, plus reading of and posting
to newsgroups or just sending e-mail, IT BUILDS READING AND WRITING SKILLS
which is far more important to the overall health of this nation than is
yelling CQ into a mic.
Ham radio CAN BE a learning tool. A computer MUST BE. It's analogous to the
benefit of buying instead of renting a home. Renting provides receipts but
buying builds equity thanks to FORCED SAVINGS. A computer MUST make a person
more literate while ham radio might but it's highly unlikely when one takes
the BARF and Stump Jumpers into consideration. Duh.

97.1 does not prohibit these discussions. But talk about something the least bit controversial, and the jammers will pile on. It's not just ham radio. Intolerance of other views is on the upswing everywhere. I dare say that if cancelling others' usenet posts was easier, most messages would never appear. It's an attitude of "you're not just wrong, but evil." After a while, fatigue sets in and people don't care. Hayul, the 3945 bunch gets jammed when they mostly talk about RADIO!

> But, no. The majority of hams today are old and/or obese, white, males who

There is no need for a 100% overlap between the net and amateur radio. I'm frustrated with the stagnation too. But sometimes you just gotta make your own fun. Heard 14.070 lately?

--
It came from C. L. Smith's Unclaimed Mysteries.

Tom,
I think your original premis is incorrect. Ham radio
has never attracted a large percentage of the general
population. Percentage wise, the figures I've seen are
about the same as they were 10, 20, and 40 years ago. I
don't think it's time to panic yet.

Oddly enough, after extensively researching this post via three separate search engines, I could find no reference at all to any Israel Cohen being a British Communist Party Official but did find the names James Tierney, Evan McDougal, Douglas Royal, Louis Brecehemont and Foster Alford. Neither can be said to have Jewish names. Hmmm....commie Goyim with NOMONKEYS using the Jewish scapegoat trick again. Hell it's as old as Moses.

Gentlemen:
This is very bad news again as of 4:20 this afternoon. NASDAQ is where the high tech stocks are and as you see it's down by $191.45 and its standing at 3172.76 is LOWER than the low hit in mid April when the bottom nearly dropped out. Take a look at two of the biggest high tech stocks, Oracle and Cisco Systems down 5.31 and 4.69 respectively and EBAY, the king of website businesses is down TWENTY DOLLARS & SIXTEEN CENTS A SHARE. See what happens when the economy overheats and the Fed has to raise interest rates? And guess what-we ain't seen nuthin' because at the end of June it's going up another 1/2 point. As a one time major investor in both the NYSE, AMEX and especially in NASDAQ, I advise those who need money over the SHORT TERM to get out before you lose your shirts. If you're nearing retirement and are in it for the long run, stick it out but it's going to take quite a while for a rebound. Despite the protestations by my broker, I cleared out in mid April just when the drop had eaten up all my paper profits and threatened the principal. He said I was making a bad mistake by selling LOW. I told him to go to hell because it was my money and his job was to manage it, not own it, and to SELL EVERYTHING RIGHT THEN AND THERE. I then reinvested in the money market and tax free municipal bonds and I'm glad I did because I'm now earning more than the honchos still in the market. In case anyone's interested as to why the Fed raised the interest rate, it's to prevent inflation because if you'll think back to the days of the Georgia peanut farmer between 1976-1980, wow did we suffer from it PLUS a borrowing rate of 24%. If you weren't aware of it, I'm the one who tells financial analyst Stuart Varney what to say on CNN. For any financial questions, feel free to write. You'll never do better than to write me that letter. Incidentally, Youngblood is losing his SHIRT over what's happening. He complains to Queenie and that's why the McKeesport clown doesn't go "hehhhhhhh.......hehhhhhhh.....heh...heh.....heh.....any more.

As both a seller and a buyer, I was pleased with the flea market. Our tables had good prices and we sold out, and we had A LOT OF ITEMS, Friday afternoon. We filled the van for the return trip with bargains.

Bill, I think the short days represent Sundays. I too upgraded so have been watching QRZ and other sources to see when my upgrade gets published. Noticed that on Tuesdays, they post for Sunday and it is always a very, very short list. For what it's worth, I upgraded on the 15th (almost 6 weeks now) and have heard nada. Through another source I know the ARRL received my info on the 24th so I fear I have another couple of weeks to wait. Oh well, I'll stay put in my Advanced portion of the band or just yell temp AE and catch the wrath of the unhappy few out there.

4759. I need help with temporary antenna

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-23 00:00:00 UTC
From: n9yln@aol.com
Message-ID: <20000523175519.12363.00000766@ng-cf1.aol.com>
Source record: 110590

Hello!
I need a temporary antenna to set up when I go visit family. I was thinking of an Outbacker antenna and using it on their tripod. But I don't like the idea of having to run outside all the time in all types of weather just to change the tap and stinger every time I decide to change bands.I was also thinking of a random wire and antenna tuner but there is really no place to string one up at. Is there any other kind of antenna which would fit my needs?
Please email me with any suggestions and/or URLs for any other brand of antenna that might work. My email add. is: N9YLN@aol.com
Thanks in advance for your help in this matter!

The US has two catagories of militia. The Second Amendment refers to the
"Unorganized Militia", and the US Code limits membership to age 44.

You're thinking of the "Organized Militia" which the US Code defines
as the National Guard. See USC Title 10, Chapter 13, Section 311.

I hope someone reads this, the noise floor in the newsgroup is quite high...

I'm planning to build a house and would like to plan for radios, antennas, etc. Is there a good reference for this, or do some of you have some advice to pass along?

Some of my questions:
1. what is the best way to feed coax into the house and still protect from weather, insects etc. My guess would be about 8 cables with the option for more.

2. Any special things to do to the roof to make antenna mountin easier, more secure?

3. Special power considerations for wall wiring?

4. How to pass grounding straps into the house?

Thanks

Brett - N7OLQ

> to pass along?

The ARRL Handbook makes good reference to construction of a
shack. So does the Radio Handbook, by Orr. Earlier additions are
often better for this, when wiring a shack was more than plugging in
a Tempo One and running a wire out the attic.

>
> Some of my questions:
> 1. what is the best way to feed coax into the house and still protect from
> weather, insects etc. My guess would be about 8 cables with the option for
> more.
>
I ran a conduit from the radio room to the attic as one house was
being built, and as my current house was being remodelled. A 2"
conduit will accept a lot of RG/8. My current radio room has three
such conduits running within the walls of the room, from below the
beltline to the attic, where they are distributed at right angles to
the outside of the house through the gables. One carries RF, one
carries control voltage to the antenna, one is in reserve for future
growth, or changes. There is a fourth smaller conduit that carries
receiver audio to a distribution block downstairs so audio can be
sent to the studio for distribution throughout the house (do
commercial, and music recording,) and to the garage, so I can
monitor frequencies for activity while out of the radio room.

The contractors supervising the remodelling of the house wondered
about all the extra conduits, but had no problem executing my
request. If you do it during construction, you'll be assured that
the work meets local codes. And the cost will be nominal.

Running the conduits to the outside at right angles to the side
of the house, keeps weather out of the conduit if you cap it. If you
rotate the path another 90 degrees so the output is inverted you
keep the conduit dry against seepage, and a cap, sealed with
silicone around each exiting wire, will keep both humidity and
insects out of the pipe.

> 2. Any special things to do to the roof to make antenna mountin easier, more
> secure?

I didn't bolt anything to the roof, opting instead for a guyed tower, mounted on a cement pad, secured to the side of the house.

>
> 3. Special power considerations for wall wiring?

That's a good question. And it depends on local codes, and your intended applications. I use individual circuits throughout the radio room, each a minimum of 20 amp service, each socket on it's own breaker. Ultimately the radio room got it's own breaker box, with 100 amp service to the radio room alone. I did the same thing with the garage, too. But then I built my race car in there. Let your contractor know what you intend to do, and specify your needs early.
>
> 4. How to pass grounding straps into the house?

I ran mine through a gap between the clapboard cedar siding and the concrete foundation. I have several ground stakes along the back of the house, so I can tap the one that's closest to the place where I need one. The ground strap is 4" wide and sheathed to resist corrosion. The ground stakes are connected to 50' radials, (100' where room permits) every 10 degrees.

Very quiet. VERY quiet.

Brett,
Now thats the way to do it! Planning ahead is usually a lot easier than 'doing' later. One suggestion is to take a look at your present shack and think of what you don't want to have to do again.
Your questions, not in order;
Grounds - If you know where in your house the shack will be, drive ground rods and lines before they pour the slab. Use heavy insulated cable (double whatever size you think is big enough). This is also a good time to run a large diameter PVC pipe for the coax runs. A good idea is to run a 'draw' rope/string before putting the pipe in. Cap the ends till your ready to move in. Radials might be a good idea too. Be sure to bury them, concrete and electricity do not mix.

Power (a/c) - The contractor will scream and yell, but run at least two circuits besides the normal outlet circuits. They will be only for radio stuff. Also a 240V line too. If the contractor hasen't had a fit yet, a small breaker panel would be nice. When they 'dry-in' the walls, have them leave a section between studs open. You can put the breaker box, any RF filters for the a/c circuits, etc here, then make a cover later. As long as we're dreaming, why not do a 'Farrady-cage' while your at it! Talk about RFI shielding! Mercy...

Roof/Antennas - Depends on how you plan to mount antennas on the roof. Going to use a tripod? You'll need extra bracing between rafters. How about a weather-head for coax or rotor cables? Radials under the roof?

General Stuff - As long as I'm spending 'your' money, I can think of lots of 'goodies', but before I 'break' you, here are some general do's and don'ts.
Concrete and high voltage do NOT mix well. The concrete tends to explode from trapped moisture expanding under high voltage. If you run anything electrical through concrete, use conduit, or weather insulated wireing. If you make any electrical connections under the house, make sure they are done extremely well to start with. It's always easier to 'over-do' than to re-do. Same for in the attic.
Electrical outlets are like closets, you never have enough. How many outlets do you need for your present equipment? In your new shack, double that number, or better yet, triple it. Thats how many you need, and you'll wish you had more in less than 6 months. Having a seperate breaker panel with a master

switch would be nice. Make it expandable for later use. When thinking about grounds, think welding cable, not wire, and not braid! Theres no such thing as too big. Have plenty of lights. Don't forget telephone lines. Run two or three lines, but just use one for now (might want a 'data' line later). Oh, by the way, when running phone lines into your shack do not use regular phone cable. Use RG-58 coax. Also not a bad idea for the rest of the house. 'Twin-ax' would be even better, but kinda 'pricey'. How about cable for TV? How about 'terminated-outlets' too?
You might think about insulating the common walls to your shack, you don't have to listen to 'them' and they don't have to listen to that '@#$%' radio. Not a bad idea for the whole house as far as that goes. It really makes a difference on the utility bills.

Well, I think I've spent all your money, so I'll quit. Good luck.....
'Doc

Oh, I can think anything I want, its the rest of me that does not agree. No matter what I think, my legs can't run as fast anymore, my arms cannot lift as much, and my back is just a traitor to the rest.

Well, I guess things could be worse. I can still hold my own - I'll just be sore for several days afterwards. :-)

I didn't get to go this year! WAA! Just because my daughter was graduating from college! (I'm kidding. I wouldn't have missed that for the world) I like sticking around till Sunday. There are years you can shoot a cannon down an isle and not hit anybody. But, it's fun checking out the sundown material!

I have to disagree. I've seen prospective ham after prospective ham snubbed
BEFORE even getting their license......on the internet, at hamfests, in
classes.
And, I'm not sure snubbed is the right word......but I can't think of a better
choice, at least right now........

In our one-hundred year history, only a small percentage of each
generation has shown an interest in the self-learning of electronic
theory, soldering, reading and understanding schematics, collecting
components, assembling radios, national and international radio laws,
ionospheric propagation and antenna theory, assembling antennas, and
communicating world-wide by RF emissions. It's very specialized; it
was never an everyman's hobby. That we have 670,000 licensees attempting
to abide by our fundamental purpose (Title 47 CFR 97.1) is in itself
amazing.

While you are correct on your above observation, the greater
reason is our years and years of hanging onto an outdated
mode called CW. Today the American Retentive Radio Luddites
are running scared. Their membership is truly dying off
to the tune of an average of 55 US hams per month. Don't believe
this? Go to the library or your stacks of QST and check the
numbers in the SK listings for the past 8-12 months.

It is, of course, too late to reverse this trend. Even if code was
eliminated
tomorrow for all licence classes regardless, you would not pry the 15-22
year old (male) crowd away from technology like the Internet. I asked a
17 year old once if he knew what ham radio was? He said that "his
grandfather
had radio stuff in the basement when he was a kid" When I asked him if he
was interested in it, he said: "..nahh, that radio stuff is boring and it's
full of old
men who put you to sleep". (I conducted this interview in 1999 at a computer
show)

I rest my case. Ham Radio - R.I.P.

> Based on these facts, you can see that the new license structure isn't

R.O.T.F.L.M.A.O. ! Sure he probably got there and bought the reasonable
priced stuff at 4:00 AM like they do at --------------. Let's hope it's a
growing TREND !!

> No wonder given the prices being asked. Folks if you are

Good! Let em waste more of their time and money! These slobs who go from
hamfest to hamfest, buy up all the deals at 5:00 AM, and then re-price it
should all drop dead. Bury them and their overloaded hamfest gypsy vans full
of over-priced junk together in the nearest landfill.

>signal from an
>inch away on his D-104 microphone.

I've scoped his signal and found it to be clean. Your reciever may be causing your problems. I've not heard any complaints about his signal except from you. I've talked to him on the phone and he does not use a D-104.

>And what a windbag of convoluted logic he
>spewes - Oy!

The convoluted logic you think is convoluted is actually a great way to lampoon the convoluted logic the left uses every day. By making his points with convoluted logic, he is in effect making fun of people who take his convoluted logic seriously. You must be taking his logic seriously otherwise you would not have made this posting. He must be having an effect on you to some degree.

>Try aa8dp, who seems to be perpetually re-loading ammo cartridges whenever

The "gun" is a non thinking inanimate object. It can not act
independent of the "user".

The person is the problem, not the gun.

And to counter the arguement of "without guns there would be no
problem". When you show me HOW you are going to get the weapons out of
the hands of the "bad guys" I'll gladly turn mine in. In the meantinme
I'm adding more and more to the stockpile.

Why is there such a problem with guns? Drugs? Why drugs? The US
Government wants it that way. That way they can convince the non
thinkers out there that we have to elliminate the guns. See...DUHHHH.

And the FCC started the "elitism' by issuing calls specific to the
class of privileges. Sane as eliminating the call areas. No more
do you have to change your call so a W4 could be in 4 land or
anywhere else in the country. Can't tell anymore. And the vanity
calls. What a crock. That really shows 'elitism'(ex: W5TIT).

As usual, I have recast what ....
<radiosigs@mindspring.com> wrote in message
news:8gbr51kdn1@slb0.atl.mindspring.net...
... complete with ad hominem attacks and other deathless stuff:

****
> I must say that this blowhard Windy or Windy blowhard tries hard to come

I must say that this blowhard Doc or Doc blowhard tries hard to come

> across as a respectable writer but from what I see, he lacks verve,
> subtlety, humor and succinctness, so who can really take him seriously?

Doc substitutes, mainly, ad hominem attacks and braggadocio, for subtlety,
humor, seriousness and succinctness.

> Take for example the snippet of his in this posting. The first part
> beginning "Shucks,Doc" can be summed up by "Your postings are no more than
> the rehasing of old news/facts." It's that simple. What's with the 100
words
> he uses saying what I did in twelve?
>
> If you read his drivel, all you'll see is an effort to impress by using

If you read Doc's drivel here and in the archives, all you'll see is an
effort to impress
by using

> fifty cent words when dimes will do. It's as if he wants to cover up his
own
> inadequate and confused thought processes by confusing ours. Windy, I'm a
> meat and potatoes guy(notice how I spelled it compared to the great Dan
> Quayle) therefore I strive to impart basics without attempting to befuddle

Windy notices that Doc pluralized Quayle's spelling. What's the point?

> the reader, without trying to do a fancy "old soft shoe" routine and wave
a
> magna cum laude diploma in their faces.

Huh?

>
> You fool nobody. All you are is an Al Bundy shoe salesman with probabaly a

Doc's source for this deathless ad hominem attack: Right out of Milton, or
Shakespeare?
The Harvard Five Foot Bookshelf?

> Peg bitch clawing at your shorts. And all because of my support for
stricter
> gun laws? Damn, you are one ignorant clown, aren't you. Take for instance

>computer ... BUILDS READING AND WRITING SKILLS which is far
>more important to the overall health of this nation than is
>yelling CQ into a mic.

Yes but while the current state of the internet is mostly type-
and-read, it is moving towards speech output, speech recognition
for control etc.

So it'll end up with the youngsters not yelling CQ into a rig's
mic but some other more modern words into the PC's mic. Wow.

"virtual ham radio" could replace ham radio OPERATING itself -
imagine a piccy of a rig on your PC screen, you'll
hear "stations" by tuning the "frequency" on the readout... let
your imagination run riot!

Ham radio will be left to those who see the magic in the real
thing, and experimenters. Maybe that's a good thing?!

How does a vanity callsign show "elitism?" I've looked at every definition of the word and found nothing that could even remotely relate to a vanity callsign.

In my dictionary, "elitism" refers to a "practice or belief in rule by an elite." What does the choice of a callsign have to do with a "practice or belief" in rule by anybody? And I just thought I was picking a callsign that I liked.

By the way (and I may regret asking), what kind of general are you? Now, if we're talking about elitism, let me point out that the military rank system is entirely based on it. And anyone that would go around in a computer newsgroup using a dubious military title, such as yours, is obsessed with their self-proclaimed elite status, and therefore obsessed with a system of elitism.

In other words, general, don't be so quick to cast the first stone.

What would you guess to be the average age of the participants in these QSOs? At least over 50, I would guess.

I didn't say amateur radio is "dead", I said that it is headed in this direction. It's simply old technology. Just as spark gap transmitters and crystal receivers of the past, analog voice transmission will soon be a relic of a bygone era. The continued insistence of Morse code knowledge for higher-class licensees only serves to accelerate the process by discouraging newcomers.

I must have gone to a different hamvention. I packed the back of an
explorer with great deals, and still came home with $$$ in pocket.
Got a lot of things I've been hunting, and some others that just
jumped into my cart, I swear :)

Of course, with the restructuring, demand for HF rigs is up, and the
prices on them seemed a bit higher than normal. What would you
expect?

Can't help put my 2 cents input here. I agree that the fleamarket was a bust. This was my first trip to Dayton...and I guess i was expecting good prices in the fleamarket because of all the sellers. I believe it went the other way, the sellers were depending on the 30,000 crowd to pay the high prices. If you were looking for old test gear or "junk" there were bargains to be found. If you were looking for HF gear in good shape...you left disappointed. I did love the new equipment displays..but better deals are to be found on Ebay than at Dayton. (and that's sad)

Just another thought...de K0FL

Where did I say anything abour forcing anyone? If they didn't want a demo, fine. Hasn't there been anything (or anyone) in your life that you've formed a pre-conceived notion about, but once you saw it or them, you discovered it was wrong?

Until I saw a demo of ham radio 12 years ago, I too, had no interest. I would've been content with my video games and computer. But seeing a demo at a local hobby and craft show sure changed my opinion about it.

WZOT was a very sick man who had a life threatening heart condition and see an OSTEOPATH for it. Can you imagine that? An osteopath? They call themselves PHYSICIANS no less but in acuality are a step above chiropractors whom I consider as a nationwide menace.
I ought to know. I was educated at N.Y.U. College of Dentistry and Medicine complex in New York City. I am a retired D.D.S. who has been socially and fraternally friendly with men in my own field as well as physicians specializing in cardiology, urology, immunology and general practice. This North Jersey-N.Y.C. Metro area boasts of the best in medicine in the world and my advice to Scotty, WZ0T, was well meant and sincere. I got him out of the grip of the osteopath and into the hands of a cardiologist and heart surgeon who performed the open heart surgery that saved his life. And here are two e-mails received from WZ0T which go to prove his appreciation.
Number one

Better be that tham a foolish JEW keep off my internet connect PLEASE/
Scotty

4814. LONG WAIT!

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-23 00:00:00 UTC
From: Bill Brannick <WmLB@prefer.net>
Message-ID: <ejgliskvh367r0drmav6ab9tqtmlmulkf4@4ax.com>
Source record: 110675

I think it is understandable that there was going to be a relatively longer wait before the FCC could process the backlog of 610's, etc. that were received in the days following April 15th..

I have been monitoring the WM7D site since it is the one that I know updates their database nightly with the callsigns that were issued or upgraded the previous day. On certain days of the week I have seen that the update includes as many as 800 or more changes from the previous day. Obviously at that rate it would not take too awfully long to catchup. Fridays for some reason seems to be a day when nothing much happens.. The highest number of processed applications on a Friday I have seen is about 150...

Since I figure they might be getting close to bringing my application to the top of the pile, and I figuring that yesterday might have been a more of a "normal" processing day, I logged on to the WM7D site this morning to see if I might have been included in yesterdays action..

The FCC processed a total of 4 applications yesterday.. according to the WM7D database.. FOUR!.. This could be a long wait I think..

4815. CATTLE CAR LENNY

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-23 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <8gehmq$so3$1@slb6.atl.mindspring.net>
Source record: 110676

I'm in a few loops with basically very nice guys...basically not necessarily. There are a few despicable oafs with whom I have nothing in common and yesterday I received pix of Dayton from a pleasant well-meaning guy who had likewise sent them to a few despicable oafs. All I did was to contact the pleasant guy to ask him not to include me in any communication involving the few despicable oafs. What's wrong with that? That's our right as Internet users, correct? If you have no use for someone in 'REAL LIFE," then why make exceptions on behalf of Joe Internet?

Let me take you back to the time on 14.313 when there was a religious war between and started by Herbert Schoenbohm, KV4FZ, a first rate anti-Semite and his pals versus Jews like I and Rich Whiten and many Christian gentlemen who were incensed over the hatred, viciousness and mental aberrations of KV4FZ and his goosestepping monsters. K2IVS, Lenny, is likewise Jewish who belongs to an Orthodox shul and as unbelievable as this may sound, LIKES HERBIE SCHOENBOHM AND HIS NEO-NAZI RATS! Because of it, Rich Whiten dubbed Lenny, "Cattle Car Lenny"meaning he would have been the perfect example of the turncoat Jew during the war who, in order to save his own skin, have worked for the Nazis herding his own people aboard cattle cars headed for extermination camps.

I agree with Rich and so do several other Jewish fellows I know from ham radio as well as the Internet but they prefer to remain anonymous for one reason or another. To put it bluntly, I have lost all respect for K2IVX and consider him as not one of mine but rather some flake who has no pride or respect for the suffering and sacrifices made by his own kind to keep the flame of Hatikvah(hope) always lit.

Getting back to the pix of Dayton, it turned out that Lenny had been in the same loop as I to receive them and I simply contacted the sender to tell him NOT to send me anything he was privy too. And what happened? All hell broke loose in my mailbox due to K2IVX's filth and dammit-I'm not taking it. I want YOU to read about it!

I have a son who works as an attorney in D.C. and who K2IVX dragged into the fray. Can you imagine the mental illness which is Lenny's by involving my family in radio squabbles. Furthermore on the Internet he threatened to contact every one in my family using e-mail. And THIS is what I got today from "Mr.Schaier."

Attcking children is just about your size. Even your son thinks you are a shit!

Tough to imagine that he's still bringing my son into matters even after he
told me, "The guy's unbalanced-keep away from him." And that's exactly what
I did because I consider Lenny to be a basket case. Now if you want to see
something interesting, log on to www.avotec.com which is Schaier's business
website. The guy is the farthest thing from a dope imaginable. I haven't
gone to that site in many months but from what I remember he offers a
knockout rï¿½sumï¿½. The man's very highly educated, has a list of clients
that's very impressive, is the head of a very productive company, is a
dedicated husband, father and grandfather and yet is one of the biggest
schmucks of all time. And to boot, is lower than low and commoner than
common based on this e-mail recently received from him.

Fuck you, you stupid bastard!

There is NO EXCUSE for that kind of language on or off the Internet and if
he were on an ISP instead of running his own, he'd be censured. Think about
it people. Is there a necessary link between intelligence and manners? If
you think so, read his comments again. I don't use such obscene vulgarities

because I was raised correctly and am capable of expressing displeasure without having to resort to gutter language. And to think that he's one of my own is DISGUSTING.

There are many who correspond with me not college educated and perhaps some don't spell too well but they're decent well-meaning guys whom I truly like and enjoy their comraderie. To you I say: think about what's in this post. Do NOT be discouraged over not being as well educated as K2IVX because he is proving that education and refinement are not one and the same. I welcome your e-mails as much as I disdain his.

Curt, it has nothing to do with attitudes here or on the air. It's because the movie is corny, ridiculous and sophomoric that it entwines amateur radio into such a mess and portrays it so badly that the public will laugh at it instead of holding it to a lofty position.

Wow, glad i didn't make the 8 hour trip. Something really weird has
happened in the used market the last few years, and poeple are trying to
sell used stuff for only around 10 percent off new. Without warranty,
and you don't even know if it works, no thanks I'll buy the new one.

Well sellers can dream on. I saw a Realistic HTX-404 in the box for
$175.00??? What a joke! It was over 5 years old and the battery pack
needed rebuilding!! He was a two-way dealer. They are USUALLY the worst
for pricing things too high. I got a NLS Miniscope 230 working in good
condition with the probes and carry case for $50.00 from a 2-way dealer.
GOOD BUY! This one is a classic. A guy was selling a folding tripod that
you would mount a Hamstick on for field day. He made them and was charging
$85.00. A few isles over someone else was selling one of his tripods for
$185.00!!! I kid you not.

I have a unused matched pair of Svetlana 4cx800a tubes I would like to swap for a new in the box hf tri band beam antenna. I would also consider a log periodic beam.
This will have to be an even swap with each person responsible for his own shipping cost. The beam must be new and still in the unopened box or at least a guarantee that all parts are there if the box has been opened.
My tubes have never been used and are in warranty.

C'mon, guy...I was a spelling champ in school, and I misspell one
once in while...and mistype all the time.

He may simply be unaware of the spelling of the word, having heard
but not seen it, as it's not a word that shows up in engineering
texts with any regularity.

Make sure you're picking on the right thing.

Spelling is important, to be sure. But you're using spelling as an
ad hom to assault him personally instead of his point.

You're better than that.

I have formulated three criteria for buying at a hamfest. All three
rules are based on the assumption that, except for simple components,
all equipment at a hamfest does not work:

Rule 1-
Buy it if it's so cheap that you won't feel bad if it ends up on Monday
night on the curb with the rest of the household garbage. It's kinda
like buying a lottery ticket - you know every ticket is a loser, but the
chance that it might be a winner makes it worth throwing away a dollar.

Example: I bought a 15 inch SVGA monitor for $5 to replace a monochrome
tube on computer #4. It works fine.

Rule 2-

Buy it if the price is right and you are confident of your ability to fix it. If you are technically inept, you can't use this rule to justify a purchase.

Example: I bought three beater Tektronix oscilloscopes for a total of $65. I sold two immediately and recovered my costs plus $15. The last scope will get benched this weekend. If it lites up, I'll check it out and give it to a neighborhood high school kid with no money that has been lusting for a real lab-grade scope.

Rule 3-
Buy it if it has some intrinsic value other than its obvious use. Again, technical ineptitude voids this rule.

Example: I bought a stack of old laptops for prices ranging from $10 to $25 each, expecting some to fire up and others to be DOA. Sure 'nuf, half have life, half are scrap. The ones with life I'll refurbish and either give to the kids for schoolwork or resell. From the dead ones I'll easily recover the purchase price in parts, subassemblies, and batteries ($10 for a Compaq battery is a bargain compared to retail).

Example: Remember those two scopes I sold? One of them went to a fellow who needed it to figure out how to reassemble a similar unit that he was repairing. He got both a template and a bunch o' repair parts for a very nominal cost.

The best deal of the weekend was the three Motorola 100W VHF Syntor radios I found abandoned on Sunday morning. The insides of all three drawers are clean. A little bastardization of the control board to reprogram them onto 2M and a little work to move the VCO and I'll have three fine radios to swap into existing mobile installations.

I went inside at Dayton all three days - to take a pee and to turn in my ticket stub. Why should I go to Dayton to pay full price and blOhio sales tax for the same stuff that I can get from a catalog or web-site? Where's the adventure in opening a box and plugging into the wall?

If you are an appliance op, don't bother with the flea market or any hamfest.

If you aren't willing to take a chance, stay home.

If you not interested in teaching yourself something new, buy from a catalog.

As for getting great gear at 50% off? - the only time that happens is when the seller is absolutely clueless about what he has. And that doesn't happen often. And I still assume it doesn't work.

I guess your Dayton experience really depends on your expectations and your attitude.

Thanks for the input, Mickey and give my regards to Minnie. All kidding aside Peter, he laces my inbox with trash language and then becomes indignant over a defense that turns into an offense. He calls my family members trying to turn them against me. He runs to MindSpring crying like a baby. It's like this, Pete; he runs his own ISP and ought to be thankful because if he were on an independent, he would have been censured for the garbage he's been throwing my way.

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr24_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr24_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr24_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

There is an elite in each and every field of endeavor. There are people
who are very good at something, people are pretty average and a small
number of people who do it very poorly. The same is certainly true of
amateur radio.

You'll probably be frightened when you read the obituary column of your
local paper, Mr. Troll. People are dying at a good clip. America is
graying. Maybe you can find a way to blame the amateur radio morse exam
for that as well.

Source record: 110553

I will second most of the other suggestions.

Power Now is the time to put it in. I currently have 3 double pairs of duplex 15/20A outlets for a total of 6 duplex outlets, no need for a power strip. Good quality also, Hubbell, not the $.98 home superstore crap. Add more outlets as you feel are necessary, 220V 30A if you need an amp, even if it is only 15 or 20 amps are necessary, you can always derate the line with a smaller breaker and outlet, just fatter wire.

If memory serves me right, NEC limits 6 outlets to a breaker.

Also, even if you don't think you will need it, have you house serviced with as big of residential service as the local power company provides. Usually 117/234V 200A 2 phase service. Although, in Maryland, BG&E offered 117/208 225A 3 phase service to my father as an option! Surprisingly enough, GE makes a 3 phase residential service entrances (breaker) panel.

I have semi-sunken home (raised ranch or split foyer depending on where you live) and have a ground rod about 18" out from the house which I run about 24" of 10ga wire to a 3/8" x 24" water pipe on the wall for a common ground point. The wire could be better.

To get my cables outside, I have a 2" PVC pipe out the wall with a 90 degree elbow facing down and I stuff it with a piece of poly? pillow material out of an old pillow (duh) wrapped in some nylon tent material to keep critters from using it as nesting material.

I have a couple of those large ladder/bike hooks to route my cables neatly along the wall.

Other non-ham items to consider

Wire all rooms with-

25 pair cat 5, or to pinch a few pennies cat 3, cable. Multi-line telephone, LAN, intercom etc.
2, yes 2 75 ohm coaxial cables, maybe even 3. Cable TV, many are 2 cable systems, satelight, regular TV, etc.
Wiring for remote stereo speakers.

Again, while the wall are open, this is the time to do it.

Congradulations and 73's

Dennis WB3KUM/9

4845. CW -- I want to learn

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-24 00:00:00 UTC
From: Paul <aschlies@citynet.net>
Message-ID: <392c139f$1_2@corp.newsfeeds.com>
Source record: 110556

I am taking a breather between professional examinations. I don't have the stomach to crack the books for my professional exam for a few weeks -- so I wanted to pick up CW the best I can over the next few weeks. I think that I if I can get over the hump of learning the letters and being able to copy at a reasonable rate, the rest will be down hill and speed increases will be a matter of practice.

I drive to work -- a 60 min. trip one way. I am looking for some code tapes to listen to while driving. While I understand that I'll will need to copy on paper what I hear (while not driving!) to get the full effect, I hope that while driving I can use this time productively to achieve my goal.

Question: I know there are readers who have a lot of experience at teaching someone new. I would like to receive recommendations on tapes that you feel are good for a beginner. From my reading the Farnsworth method is highly rated and would like "Farnsworth" tapes.

Also, would like to find some software (I don't mind paying for it) to run on my PC to help "spice" up the copy. I don't want to "memorize" tapes -- I want to learn -- so I would also like to hear about some titles of software (and URL's if they exist) on quality software to go along with the program.

Thank You
Tony N8XJA

I recorded the output of a free Windows program called "MorseCat" onto some tapes and then used that. MorseCat can be found by most search engines.

Yes! Some are global and some are for the current memory channel.
Most are for the current channel and not the saved channel. If you
make any changes such as offset, you will need to save the channel
again or you will lose it when you change channels.

> Also there is no mention on how to erase a memory for one repeater.

You have to have software to erase channels.

You may want to join the VX5 list on onelist.com

It really is a great radio.

4853. UO-14 satellite tracking information

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-24 00:00:00 UTC
From: Michael1998@webtv.net
Message-ID: <809-392C4BCC-69@storefull-132.iap.bryant.webtv.net>
Source record: 110564

Can anyone tell me of a good program on the internet to track the OSCAR 14 satellite with? I have seen other real-time programs for tracking amateur satellites, but not the UO-14 satellite. Any idea approximately how many times a day the satellite passes directly over the East coast? I understand the satellite is very easy to work with a dual band ht or mobile rig. Anybody who has worked the satellite can you help? Thanks a lot!

RJW,

Glad you read the posts on Eham. The rig is just o.k. I'm not a CW fan so the noisy relay is no big deal. My biggest disappointment is that they have not done anything to improve the shortcomings of the radio and SGC could sure learn a few things about customer relations and how to service the customer. Two years in a row I went to talk with them at Dayton and they cannot even answer relatively simple questions.

The ARRL VEC just added an additional 8 people to help process VE test session paperwork.
They are currently processing test paperwork received by the ARRL VEC on April 24th.

A web site has been established for people to check when their test paperwork was received by the ARRL VEC and you can go to it at:
http://www.arrl.org/arrlvec/status.html

Mike,

I use a program called Winorbit. It is free and it works pretty good.
Make sure you get a fresh set of Keps. Check Amsat.org to get the link
to download this program. Let me know if you have any other questions
about uo-14.

Yes, a forensic ornithologist at Clemson University identified a bird
that had died in my petshop with Clamydia....a very dangerous disease.
Luckily, none of my other birds contracted it because of our
quarantine procedures.

>What would you guess to be the average age of the participants in these QSOs?
>At least over 50, I would guess.

Ham radio never was a young man's game. Yet, 50+ is not old! I'm 46
and have three state records in swimming. I'm certain I could out-
swim anyone on this NG in any distance now and when I turn 50; I
continue to train daily.

>I didn't say amateur radio is "dead", I said that it is headed in this
>direction.

Re-read what you wrote in the top paragraph:

>>>radio as an ANCIENT and DECEASED hobby of the PAST. An accurate
>>>portrayal indeed,

You called it a deceased hobby. Now you say you didn't state that.

>analog voice transmission will soon be a relic of a bygone era.

Mental telepathy has been perfected?

>The
>continued insistence of Morse code knowledge for
>higher-class licensees only serves to accelerate the process by discouraging
>newcomers.

With as crowded as the bands are, we could use a moratorium on new
licensees. But I fail to see why you're interested in attracting new-
comers; you have nothing good to say about ham radio:

>>>radio as an ANCIENT and DECEASED hobby of the PAST. An accurate
>>>portrayal indeed,

The Charleston SC ARRL test session of 4/15/2K also showed up on the
FCC database on the 22nd.

Yesterday I couldn't even SPELL E-x-t-r-a! Now I are one!

Larry....

DITTO.....And you are quite right , I bought 3 Hand Held DMM's out in the back for $10.00 each. They were new but of course they were "off brand" and she had about 500 of them. But OK for the Car , Boat , whatever. The thing that got me was all the "Flea Market" people who ran over and bought them by the stacks and then put them with their "junk" on their tables and tried to pawn them off for $20.00 and up!!! Whats the deal here? I walked around out back for about 1/2 a day but found it much more appealing to be inside with the vendors. I think the sum up of this chat is that the "Flea Market" people just like carting their junk around from fest to fest.In all honesty , I did see some "junk" that was in Orlando at it's ham fest last year. Used radios were only a few percent lower than the cost of new ones and were in the sun all day as well as filthy. I would like to say that the hot dogs were good at the barbeque place though....

Whats a "stinger"?.

If you have access to a window here is a simple little toy that works
well.

Get a old fishing pole. Get some small insulated wire. Wrap about 1
wave of wire on the fishing pole. Hook it to a tuner and adjust for
resonance. You should also hang a 1/4 wave wire on the ground of the
coax (at the antenna base) to act as the counterpoise.

You want to wrap the wire tight. How do you stick it out the window?
I used a paper holder from a clip board. Use your imagination.

Remember; Anything will radiate, its the degree of efficiency thereof.

You can use that phrase, just give me credit..hi.

One thing is for sure, with people trying to sell used garbage (dirty, abused and scratched up) radios for 10% under the price of the same radio new....well fleamarket vendors....the new equipment vendors thank you from the bottom of their hearts!!!

If I am buying used stuff I expect it to be in good condition and be half of what I can buy it new....if not...well I just buy new. Then I get a warranty and the equipment looks nice, just like the way I treat my equipment.

Regarding the high prices being charged at swap tables: I'd say the proliferation of eBay has a lot to do with this. As more and more hams become "net literate", they realize their used gear will fetch substantially higher prices if they auction it online. It then becomes a matter of simple economics and common sense. Why would someone sell, for example, a cellular-capable scanner for $75 at the hamfest when it will fetch $175 on eBay?

Have been involved in SWLing for 45 years and hamming for 11. This solar cycle so far is one of the most disappointing. The 1958 peak, by contrast, was hotter than a firecracker. I think it was that season which confirmed me as a lifelong radio addict.

Source record: 110628

Brett, I just finished doing what you'rte thinking of and I have
a few suggestions from what Id di right and what I didn't do
right! I have a serious grounding problem because I am on the
second floor. Please take that into consideration if a 2 story
is in the plans. I had the electrician isolate that room and
put it on a separate breaker. I should have included a 220
outlet for later use of an amp but I didn't. Couldn't hurt to
have it. I also had my builder install a 1 1/2 inch PVC pipe
through the wall (with a slight downward angle to the outside)
to allow cable runs into the room. I use common sponges to plug
the inside and outside of the pipe once the cables were run. It
sould not cost too much more to have the room isolated
electrically. Also make sure you put plenty (and I mean plenty)
of outlets on the wall. It is amazing how many wall warts are
required by todays ancillary equipment. I had plenty put in and
I still have a bunch of terminal strips hanging on them!

By the way, if possible, in the room you choose as your shack,
have them build a false wall. Access to behind this wall will
allow you to hide all the cables. Wives like this feature I
have found!! If you have basement (not down here in Texas) it
gets even simpler. Makes sure the ground rods are driven when
the foundation is poured. Connect them to a central grounding
point. Utilize the ceiling for cable runs etc. Many
possibilites!

Hope this helps a little. Best of luck with the new house.

I personally believe that Tom's view is only true to a small point.
The real culprit is technical evolution. Back in the pre personal
computer days Ham Radio was the real ticket for technical hobbies. Now,
video games, i.e. Playstations, etc, computer and internet have
supplanted it. I was one of the first in NE Tenn to use packet (before
TNC2s, used Xerox 820s with Phil Karn's TNC program and home made
modems). It was really neat, sending E-mail and downloading programs via
ham radio. Now lets face it, it is in most cases impractical if the
Internet is available.

Personal com on the roads? Cell phones replaced that. I had intended for
my daughters to get no-code tech licenses as a part of their getting
drivers licenses. But, now why, unless they really want to? Cell phones
are given away along with low cost plans. Cheaper in the long run than
buying a couple of handhelds. Plus, really more practical as you aren't
limited to "ham only" com.

Ham Radio isn't the only activity effected by the the times. I Clifford
Stoll's book, "High Tech Heretic", he quotes a baseball scout as saying
that the reason that major league pitching is so scarce today is because
boys are in front of Playstations and computers instead of having a
"catch". I see it. In my preteen and teen years we always played a lot
of ball. Non-orginized. If the fields weren't being used by leagues,
kids were having "pick-up" games. In the summer fields were always in
use. Not any more. I drive by our local Ruritan fields all the time.
Very seldom is anybody on them. I helped coach. Most kids really didn't
get any better during the season. They rarely touch a ball except during
practice and games.

No, ham radio is just suffering the same as other activities in this new
"World Wide Web" times.

P.S. Get Stoll's two books, "Silicon Valley Snake Oil" and "High Tech
Heretic" from the library. Two excellent books that give food for
thought about computers in our society today. Stoll was the
astronomer/sys-op who caught the German hackers getting into military
systems about 15 years ago. Wrote "The Cuckoo's Egg", another good book,
about it. Plus a PBS Nova segment.

"T.L. Bryant" wrote:

Not only that, a brand new ham, of any license class, can apply for and be
granted the use of one of those really elite 1X1 call signs.

Hmmm.... if is it available to everybody, is it still elite? :-)

Just trying to keep you honest. You wrote:

>movie portrays amateur radio as an ANCIENT and DECEASED hobby of the
>PAST. An accurate portrayal indeed,

then you denied that you said that:

>I didn't say amateur radio is "dead",

If that's "nit-picking," then so be it.

>and rants

Nothing I've ever written matches the definition of "rant."

>you aren't
>exactly a great public relations poster boy for the hobby yourself.

Either someone is or isn't interested in the self-learning of:
Electronic theory, soldering, reading and understanding schematics,
collecting components, assembling radios, national and international radio
laws, ionospheric propagation and antenna theory, assembling antennas,
communicating world-wide by RF emissions, and providing emergency
communications. If my remarks sours someone's interest of the above, then
I have to question their original sincerity in ham radio.

I have a yaezu ft-101ex that I would like to sell or trade. Radio recieves well, transmit is low, could be tubes could be something else. I just want a backup radio and I don't want to put money in to it. MMake me an offer, I will considder trade with cash if you would like, just something for a backup radio, a ts130 or something, even a 2950 if the deal is right. Email n1umj@mediaone if you might be interested. The radio is a backup and I don't want to put any money in to a backup radio especially where my main radio is so reliable, I just want a backup just incase. thanks,

Prices I give along with the discription of the item will be what AES
is selling it for rounded to the nearest $1, then at the end, what
I'm asking for the whole lot.

Yaesu FT-50RD Dual Band HandHeld radio $240

2 Maha MH-FNB-41 9.6v 900mah NiMH batteries $55ea $110
These batteries will give a full 5w out all across the band.

Maha universal drop in rapid chgr/conditioner does nicads and nimh
batteries $60

CT62 Cat Interface cable $30

FTT12 16# kepad Enc/Dec DCS & CTCSS $20

ADMS-1E Windows Programming Software $40

All this as you can see retails for $500 +/- a few dollars.
I'm asking $325 shipped prepay or COD.

You talk about chutzpah! Sen. Jesse Helms of North Carolina takes the cake. I just heard he's going to try and tie up and cause the Senate to reject the normalization trade bill with Red China. What a myopic creep. Sure, let's ignore one billion people who are trying to emerge as a global economic power which they will do with or without the U.S.A. Let's allow all that trade go to France, England and others. Let's hurt ourselves to appease Helmsmanese creeps.
Now get this: Helms doesn't want to do business with China because of their human rights violations. Ha! He's one to talk. The man has suppressed every progressive bill to ever go before the Senate. He was and still is an avowed segregationist. He's an embarassment to the fine people of North Carolina who are overwhelmed by rednecks. And that's exactly what Helms is-a redneck worse than a John Rocker could ever be. How amazing a guy like that has so much influence in D.C. How disturbing too.

Well Andrew, antennas designed for a specific band almost always perform better than one designed for several. However, there are other considerations. How much room do you have for multiple antennas (some antennas will have to be placed on a separate mast because the others will interfere with it)? Do you want to run all that coax for multiple antennas? Will the separate antennas cost more than one? What about the multiple masts, guy wire, and ground rods, if separate masts are required? For many people, these other considerations lend weight to the multi-band antenna.

Being from NC, Jesse is usually my kind of man. Look at what the trade bill with Mexico did to the jobs in the US. Being in the South, most of the jobs here are in the textile industry. We have already lost too many jobs to the countries that pay only a few dollars a day. I don't know what kind of job you have or what you make, but just think what would happen to your job if they could put it a country where the wages for the same job is only a few dollars a day or if you lost your job due to this.

4907. Need help with reverse repeat feature for IC-2700

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-25 00:00:00 UTC
From: Jim Lynch <jwl@sgi.com>
Message-ID: <392D1400.D098A41A@sgi.com>
Source record: 110486

I know that it will do it, 'cause I know a ham that did it, but he's forgotten how he got it working. Apparently it is one of those multi-button presses that actuates it. The manual doesn't mention it so I assume that it is an undocumented feature.

So does anyone have any information on making my IC-2700 into a repeater repeater? That is, letting me us a 440 handheld to transmit to the IC-2700, which in turn sends out a 144 mhz signal to the repeater and then in turn sends the signal from the repeater back out on 440.

Thanks
Jim de K4GVO

4908. Re: CW -- I want to learn

Hi Tony,

I've had a lot of experience with tapes, and little real success at developing real CW skills. CW was the nemesis of my ham radio ambitions for nearly 50 years.

Recently found a program on the internet called "Ham University" (HAMU) that has helped a lot. Has games, lessons, and drills. You could make tapes if they prove useful to you.

Best advice I have heard lately is to start learning the code at the speed you waht to achieve, i.e 15 wpm or whatever, learn one character first, then two, and keep adding characters at that speed until you copy all of the characters at your desired speed.

Hope these thoughts are useful.

Bill

>I have heard there were some interesting sightings walking around at the >Dayton Hamfest.What were the wildest sightings that you have seen there Someone said someone was walking around with an antenna on his head is this true What other kind of interesting things were there

I could actually see one guy's belt buckle. Definitely a rare sight at a hamfest.

Message-ID: <8gj8jv$6g5$1@slb3.atl.mindspring.net>
Source record: 110492

Question: how does your appraisal of the "rooking" Herbie got from the government line up with the fact that his hatred of Intercon was predicated on anti-Semitism which you cannot dispel as hearsay? When someone gets on the air to announce that Intercon was controlled by Jews in order to steal money from phone companies, it seems strange that a Jew would run to his aid despite, as you say, some government hanky panky? I admit, by no stretch of the imagination, to having knowledge of the various intracacies of the trial i.e the government's case against KV4FZ therefore my intense dislike of the man is predicated on the human interest side of the story which itself is predicated on Jew hating and baiting by him and disseminated in such ways to create the same anti-Jewish feeling by sympathizers which every anti-Semite can arouse. The incessant pounding I've been giving him for more than a decade is my way of expressing "Never forgive-never forget" which is as valid and deserving as both can be and to be told, as I have been, that this is not the Christian thing to do is beyond hypocritical because if there is one thing Christianity has been noted for negatively has been WAR. To turn the other cheek is just about the most stupid naive philosophy possible because it's applicable only to biblical nonsense rather than every day living and as examples, if America's supposed to be a "Christian country," why then did we not turn our cheek instead of going to war with Spain in 1898, with the Central Powers in 1917; with the Axis in 1941; with the N.Koreans and Chinese in 1950; with" Charlie" and the Chinese from 1964-1975; with the Cubanos in Grenada; with the pro-Noriega elements in Panama and Sadaam Hussein plus all our "minor" policing actions for heaven knows how long? I simply cited such instances to prove that when your enemy challenges the principles for which you stand, you kick butt rather than turning a cheek which explains Doc v. FZ.
Yes I can understand Herb's dilemma. Had he come clean with Judge Luton he would have jeapodized his defense against the government and I myself would never have wanted to be put in his position but keep in mind that it was HE HIMSELF, with his arrogance, defiance of government and cockiness who created all the personal chaos. Bob, I admire your staunchness in trying to correct what you personally perceive to be a government wrong against Herbie but what you fail to realize is that while you were busting your hump to help him, he was calling you a kike behind your back because to him you were no better than the "Jews who stole money from phone companies on behalf of Intercon."
Doc,AF2Y

Probably wasn't just me - there were several vendors with piles of decrepit laptops, each supporting their own feeding frenzy. For my purchases, I stuck to a few flavors of Compaq so that I can swap subassemblies and leverage my prior knowledge of Compaq laptops. I picked and chose from each vendor those units that I thought had the best chances for new life.

Hey, a lot of people think they're selling gold. But it's a market - I can walk until I find what I want at the price I want.

Hamfesting is an art. It really takes a while to learn the game and you will get burned - education is never free. I won't buy a $10 CDROM from someone with a small table loaded with beanie babies and pencil sharpeners - that thing is broken; that's why it's on the table and not in his computer. I will buy the $10 CDROM from the commercial guy who pulled a skid of them out of a yellow Ryder truck. Most likely he bought a pile of unwanted computers from a corporation for cents on the pound and is selling off perfectly useable pieces and making good money doing it. But I won't touch anything in his box of assorted $20 motherboards. Those customer returns were returned for a reason. But I may take a chance on Mr. Beanie Baby. He probably bought a new Pentathalon 10,000 Terahertz with integral toaster-oven motherboard and he can't bear to toss that old Pentium 166 board that he paid so much for into the garbage.

The 3-day Dayton fleamarket is always an adventure.

4920. Warning to HTX-200 and HTX-400 owners - fatal design flaw

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-25 00:00:00 UTC
From: n1ist@netcom.com
Message-ID: <8gjf2cdij1@slb7.atl.mindspring.net>
Source record: 110499
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have just spent some time repairing some of Radio Shack HTX-200 and HTX-400 radios. All of them suffered from the same promlem - transmits fine, no receive audio but the s-meter reacts properly and the squelch seems to work fine.

This radio uses a push/pull audio stage; both sides of the external speaker jack are driven (probably to get more volume from the 3V batteries). The manual warns you not to short either side to ground. It claims that if you do so (plugging it into a TNC or using certain speaker mikes), the display will indicate 'S-SHORT' and the audio amp will be turned off.

In reality (confirmed by reading the schematic and looking in the radio), this protection circuit was never implemented - the components in the schematic are labeled 'nu' (not used) and are not installed. If you short either speaker lead to ground, the switching transistor used to mute the amp when the squelch is open will burn out. On the 2M unit, it is Q607.

This is a SOT-23 surface mount part. The service manual lists it as a 'KTA2015' labeled 'ZO'. I replaced it with a 2N3906 (same pinout) labeled '2A'. It is on the rear of the audio/RF board right where the audio board connects in, and is connected to pin 1 (switched B+) of the amp. Not too hard to change if you are used to surface mount work.

So what does this mean?

- DO NOT use the HTX-200 or HTX-400 with anything plugged in to the headphone jack other than a headphone or speaker.

- Make sure speaker mikes keep both sides of the speaker plug (3.5mm) isolated from the mike plug (2.5 mm). Not all of them are.

- DO NOT use this radio with a TNC or powered speaker sharing the same power supply (unless you wire up an isolation transformer for the audio...)

/mike

Antennas on hard hats? Shucks, that's nothing new. I've seen such
things at other hamfests. Now what makes Dayton unique are the guys
who carefully solder miniature towers to their hard-hats. One guy I
saw even included blinking lights!

Why are you all so impatient to drop /AE or /AG from your calls? Are
you ashamed or intimidated by those idiots that call you "welfare" hams?
Get on the air and show them you have a set of them.

The only ones that need be impatient are those that are awaiting their
first license/callsign. What difference does it make how long it
takes? Just get on the air and enjoy your new privlidges.

It took at least 6 weeks, and normally 8 when I tested...and that was
to just find out if you passed the test ! There were no "instant
upgrades" either.

Dan/W4NTI Thats right...Im and extra heavy....gotta loose that
weight..hi hi.

4930. Better to have 1 antennaa, or several single band?

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-25 00:00:00 UTC
From: A 'n' A <saciuk@freenet.edmonton.ab.ca>
Message-ID: <392D5A44.978D04F5@freenet.edmonton.ab.ca>
Source record: 110509

Hello!

I was looking into buying an antenna in the next little while. As of right now, I am entitled to 6m and up, however, I will be starting a morse code regimen in the next few months. Does it make more sense to purchase an expensive 10 band antenna, and not use most of its capability, or would it make more sense to get a cheaper and smaller antenna that would handle 6m and 2m, and buy an HF antenna later. More than likely, I will be using it with an IC 746 transciever. I will be taking my rig to Northern Manitoba (58ï¿½N), and the winds can be pretty cold and brutal up there, so I'm afraid of toppling tower syndrome :)

Any recommendations? Product recommendations? Thanks!

Probably not. A beverage work best at lower frequencies such as 160m
ham band and below.

I don't know what kind of noise you are getting, but try a loop antenna
and possibly a pre-amp. Without more info on the noise I can't be more
specific.

> at the Dayton Hamfest.

Yes, their was! It was almost as much fun as going to
a cross between a traveling carnival, WCW Wrestling
show and a pig & fried chicken barbeque at a NASCAR
event. I have never seen more overweight, waddling
examples of white trailer trash in any one place.
(not everyone mind you, but a fair percentage!)

> What were the wildest sightings that
> you have seen there Someone said
> someone was walking around with an
> antenna on his head is this true What other
> kind of interesting things were there

The usual folks with multiple rubber duckies cliped
to ball caps were in attendance. I did not see the more
classic guy with the hardhat ball-mounted 6 foot whip
and PRC-25 on his back as I have in past years.
Perhaps this ham finally went "apeshit" at his
Post Office job like the late N5PS?

We can only hope - grin

Another classic are those who must have 3-4-5 (or more)
HT's on their belt, which is already straining to hold
back their spare-tire, McDonalds burger eating GUT in
it's place. Give em another 10 points if they smoke
also. One high point of amusement was the 300 pound
guy in the black shirt who had 3 HT's on the back end
of his belt, pullin his pants down so all could see his
Classic American "Plumber's Butt". Oh, how I WISH that I
brought my Digital camera I forgot on the top of the china
closet at home! What a classic "Dayton Hamfest Kodachrome
Moment" that .jpeg would have made!

One good thing, the Hamvention people took a dim view of
anyone selling porno tapes in the flea market this Year.
Good for them! Bad enough are the scumbags that sell this
trash, worse when you have to pay an admission charge
expecting to see ham gear and then you see imported
Asian porno tapes for sale on some jerkoffs table.

(pun intended)

Prices? Way too high on alot of stuff. Some dealers actually
expected to sell 3-Year-old used and nicotene stained HF rigs
for $200 less than what you'd pay for new. Try to dicker them
down on the price and they get insulted. Screw them. Let them
cart their "bargans" to hamfests for the rest of the Year and
not sell a thing - assholes.

Another fun sight was the foreigeners (Central or South Americans?) pulling
out *thick wads* of US Greenbacks for new HT's
and HF rigs. Buying them in bulk, 20 to 30 at a time!
Guess these radios will end up being used for tactical communications
by "Revolutionary Elements" or Taxicabs, Boaters etc....??
That's what I love about America! With Cash Dineros you can buy
easily-modified state of the art communications one week, then
hang around for the gun show next week. "Hola! I pay cash!"
"..sheeip it Fed-Ex to Geeinral Jose Enricho Gonzales in
The Republica of Sylvania, Here $10,000! Thank-you seniore Gringo! "

I just freakin love it. What a Country!

One thing is for sure, with people trying to sell used garbage (dirty, abused and scratched up) radios for 10% under the price of the same radio new....well fleamarket vendors....the new equipment vendors thank you from the bottom of their hearts!!!

If I am buying used stuff I expect it to be in good condition and be half of what I can buy it new....if not...well I just buy new. Then I get a warranty and the equipment looks nice, just like the way I treat my equipment.

I would tend to suggest against an antenna that handles 6m/2m and HF all
in one piece.

A lot depends on how much room you have for your antenna and how
portable you expect it to be. Are you talking about something you
expect to use mobile, or are you establishing a base station?

Joe,
A Beverage antenna may work out better than the random
wire your using now. I think there are other antennas that
would work 'better' than a Beverage, though. While a Beverage
is a 'nice' antenna, it is a bit directional, so in some cases
it would be worse than what your using now, may be.
(Looks like you've found a few of the 'brown spots' on your
HF radio dial!).

A loop presents decent side rejection. However it is also a monster at
3.5 mhz. You could try building a triangle or square loop and make it
random to fit in the space you have available. Add a small antenna
tuner and possibly a pre-amp.

The tuner will aid in matching the loop impedance to the feedline and
the pre-amp would enhance the signals you are trying to hear. In order
to work in this manner, the tuner assembly would have to be at the
antenna.

As for noise reduction...being a loop it is better than a dipole type
of configuration. And the loop will be bi-directional if you put the
broadside to the ne/sw. It will null to the nw/sw.

Andrew,

For base station use, I just bought a GAP Antenna Eagle DX. This weekend I will be stretching her wings on the WPX CW contest. You may want to look into one of their models that covers 2/6M, the Challenger DX I think. Only problem is that you need some buried ground radials, but that should not be too bad. They are designed to be ground mounted (on a 10' mast pipe) so no towers are needed.

About the winds, they seem pretty well built. I see comments of the thing withstanding some fierce winds, but do not quote me.

Good luck on upgrading! HF is alot of fun.

73,

Jason Hissong

Sounds like a perfect candidate for a 'schematic' on the Radio Shack
web page! The 202 and 404 both had a recomended transformer
coupling for the HT to a TNC. I wonder if because that's how they
did it before, that's how they tested these without thinking how the
majority of users would try to hook up.

Do you really feel that you will need/want antenna's for "all the bands?"

Just as you will eventually discover that there are one or two modes you
really enjoy you will also find that there are only one or two HF bands
that appeal to your operating style. (chew the fat, collect QSL cards,
emergency operations, whatever.)

Nothing can beat a simple dipole for portability, ruggedness and ease of
reinstallation after the wind blows it down.

For a band like 20 you can homebrew a "plumbers delight" beam comprised of
a couple of elements that will hopefully be rugged enough for the nastiest
Canadian winter.

When the time comes, welcome to the HF world.

No, the antenna you need is a LOOP! See the handbook or lots of old
articles. An indoor loop picks up too much AC line crap. You need an
outdoor loop and they are quite small in physical size.....and quiet!

Bob,

You are VERY lucky. You defend Herb and all you get is a mild reprimand from the protector of our people; my g-d he understands you and approves of what you do. Thanks goodness; I'm sure it helps you sleep at night.

I talk to Herb and treat him as I want to be treated, do not wish any bad things for him and his family and I get accused of being like those that led our people to the chambers.

Some guys just have all the luck

Len

So what does this have to do with the price of tea in China?

Dave, I suggest you stick with marketing cheap tinny microphones and
"audio equalizers" to the same knucklheads who bought
into Tiny-Tennas and "cure-all" magnetic matress pads.

4961. KV4FZ's Endgame: Vindication

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-25 00:00:00 UTC
From: Trebb@webtv.net
Message-ID: <14890-392CBD11-129@storefull-246.iap.bryant.webtv.net>
Source record: 110578

Whenever I see the KV4FZ, Herb Schoenbohm, story, I feel compelled to respond. I was present during Herb's 1992 criminal trial, later discovering fabricated evidence resulting in the overturn of two of criminal convictions.

I know: You want me to give it up, go away. Our Constitutional law, though, is made of sterner stuff. Let me take you on a walk through the formative events, the criminal case, the FCC Licensing Hearing, the pending criminal appeals process-- truth and falsehood. Stay open-minded.

First hypocrisy! In the late eighties I interviewed Herb for an article I was dong for Florida Skip Magazine. Meeting him for the first time, I sensed a guy driven to prevent illegal bypass on ham radio of telephone tolls. Follow-up interviews found him supported by no less an entity than the Amateur Auxilary in central Florida. ("He knows what he's talking about," said Swede Hockberg.) A part of his repertoire was Intercon and the late Jim Jones, who are alleged to have joined in "bypass" activity.

Naturally when he was charged with doing the very thing he decried, credibility came to the fore with me. But never one to turn down anyone asking for help, I flew to St. Croix.

When the federal government pours a million dollars into getting a conviction, defendants need all the help they can get.
Arriving on that tranquil island, I was instantly thrust in the midst of FBI and Secret Service tailing and bugging us. I realized, this was going to be some case.

However, the lengths to which the government went to get a conviction astonished me. While there is no question Herb tinkered with Calls (Caribbean Long Lines Service), he didn't commit the felonies of which he stood accused. Misdemeanors, yes; felonies, no.

The pieces were falling into place. Herb's enemies had been jelling (thousands of complaints went to the FCC and Congress). Dogged by credit card fraud, the federal government had enacted new statutes. Having led with his chin, Herb became the exemplary case.

How could he appear before the FCC? With Herb still trying to extricate himself in the criminal process, he shouldn't be forced to testify against himself. Even admitting tinkering with Calls to the FCC, while likely saving his license, would doom his efforts in the judiciary. Legally however, the fact that Herb failed to object at the FCC hearing may very well be deemed as waiver.

Telling the FCC tribunal the truth to the point where he would not be required to testify against himself apparently wasn't part of the game plan. Had he done so, he could have respectfully insisted upon preservation of his right against self incrimination pending completion of the judicial process. Simply by raising those rights, the FCC would have been required to protect them. His testimony would have been totally candid, forthright up to the point of reserving his rights, and, most importantly, quite clear.

Thrust into this position by his own conduct, Herb is now working on behalf of all citizens in exonerating himself on the remaining criminal count. With the printout discarded as fabricated and with no one number imputed to Herb's brain, he should triumph on lack of specificity or vagueness.

His conviction reads: "Possession of a counterfeit access device with intent to defraud." However, no such conviction should stand when the device remains some number in his mind and not a definable definite number.

His Constitutional cause is everyone's.

> sensed a guy driven to prevent illegal bypass on ham radio of telephone
> tolls.

Yes, we should *all* get upset over an infrequent
telephone patch by a boater, looking to say hello
to his family back home. Let us not forget
those offshore Medical-Missionaries. Doctors with
years of professional medical experience, who would
volunteer (..at no monetary compensation) with human-
itarin organizations like UNICEF, WHO, Baptist Medical
Missionaries Worldwide and others -to provide *FREE*
medical care and pharmaceuticals to poor people in
places like Haiti, Nicaguraua, Honduras, French Guiana
and other places. Ham radio communications remains
an important part of the humanatarian activities of
these Volunteer Medical Professionals.

What you read above is the kind of people that KV4FZ took
a sick, twisted pleasure in attacking, even at the expense
of the welfare of his home and family. (ask Mr Miller
about how Monica was wearing 2nd hand clothing and tacking
tin plates to the leaky roof of Herb's hovel, all the while
Herbie put a priority to continue his attacks against
the fine people of the Intercontinental and Maritime Mobile
Network.

Ask any of the original Net Control stations about the
lunacy they had to put up with from this mental patient Herbert Luther
Schoenbaum KV4FZ. Ask Mike Galego's (ka4muj's) widow about how Herbie
abandoned Mike in his last days to seek out new "radio thugs"
to do his bidding for him.

Just like he did with Dick, N5FX, who died alone with nobody to pick up his
insulin. How Herb seemed more concerned that Dick Eastman
get back on the air ASAP to resume sending nursery rhimes
in CW on 14.313 - and this after his house was blown away
in a tornado in Wichtia Falls in the early-80's and did not send
one red Cent to Dick to rebuild. Nice guy eh?

> Follow-up interviews found him supported by no less an entity

True, the Jim Jones wb6mid incident was tragic, but nobody
in ICON knew what was going on, and the Net was quite
contrite in retrospect about it later. Herb tried to mine
this for all it was worth, in utter tastelessness and
crassness to his own ends however.

> Thrust into this position by his own conduct, Herb is now working on
> behalf of all citizens in exonerating himself on the remaining criminal

> vagueness.

Horse-Apples Bob.

There were tapes of Herbie played in the
courtroom, and later on the air, clearly
indicating Herb's attempts to "crack" into
Carribean Automated Long Lines network *telephony
switchgear*. This is no different than a phone phreaker
using a "red" or "blue" or "beige" box to
obtain free phone calls.

It's HIGHLY illegal also.

> His conviction reads: "Possession of a counterfeit access device with
> intent to defraud." However, no such conviction should stand when the
> device remains some number in his mind and not a definable definite
> number.

I guess the DTMF tones we both heard on the tape
trying to crack the C.A.L.L.S. Network were
being made by a toy whistle found inside of
a box of Captain Crunch cereal? No..?

Did herbie whistle the DTMF tones using his lips?

On another topic...

What about the 2 meter VHF equipment
that K1MAN sent down to St. Croix after the hurricane hit
for use by IARN Disaster relief, that dissappeared.

The irony of asking pity for the poor southern anti-union states who
have sucked businesses away from the north for years because of the
resultant lower labor costs, rendering many northern industrial towns
rusting hulks devoid of jobs or people, just takes my breath away.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur.equipment,

My suggestion is make or buy an antenna (or antennas) for 6 and 2, then make antennas for HF later. Dipoles for HF are easy to make, and just as good as the ones you can purchase.

>markets to offset and even gain an advantage over what they export here.

Bwa Ha Ha Ha .. Ask the labor unions why they opposed the bill if
it'll *create* so much work here ? It'll give these money grubbing/
making machines without a FLAG (lots of US companies) a nice chance
to set up shop in China and get some dirt cheap labor and avoid
environmental rules / US labor laws in the process. We'll lose our
manufacturing base and China will get some great new technology.
Eventually we'll be doing each other's wash here in our 'service
economy' and importing cars , trucks etc. and hell may even have to
buy *our* military weapons from China. When the manufacturing base
goes , kiss your ass goodbye as nothing of any *value* gets created
when you sell me a stock and I sell you an insurance policy .....
(while I'm ranting) .. For a first hand example check out a *nice*
American company called *NIKE* and see how many of those $150.00 shoes
they *MAKE* here (ZERO) and how many get made with 25 cent an hour
labor in places like Viet Nam etc ...

Still doing drugs, Fatassed Dimmy? And learn to spell, you dropout.
You really shouldn't cast aspersions since you have your tongue so far
up Herbie's rear-end you can taste his masticated entrees.

Here is story that my gud pal on 14313 give to me.
He say he this is fun to do. Sound good fun tooo mee.

Training school:

Her instructions had been quite explicit, to exit the bus and walk down Fortuna street to the Shell station that was in view two blocks away. In the alley behind the station I found five cars parked in the shadows where she had directed me to go. I hesitantly pulled out the key she had sent to me. As she had commanded, I began trying it in the trunk locks of the cars, it opened the trunk of the fourth car I tried it on. The car had no plates on it. She had notified me to find the car the key went to, open the trunk, get in and close it behind me, leaving the key in the lock. My heart raced as I stood there looking around, but nobody was in sight. I knew that my life would never be the same if I did what she had commanded, but I was unable to defy her. So I sat down in the trunk, covered my face with the painted over divers mask I found lying there as she had ordered, laid down inside and slowly pulled the lid shut. As the lock clicked tight I panicked, and wanted to scream out, but I was so terrified that I couldn't utter a sound. I laid there affright over what I had done. It seemed like an hour I was so scared, but shortly thereafter I heard the click of a woman's high heels approaching, the key being pulled from the lock, then the sound of license plates being placed on the vehicle. Finally, I heard the drivers door open and close. The engine roared to life, and the auto began to move through the alley as I heard a woman's voice state unsympathetically "We're glad you came slave." For about two hours we traveled along freeways and winding roads until we arrived at our destination. When the vehicle stopped, except for the sound of crickets, there was complete silence. The door opened, then I heard the woman ask, "Do you have the mask on?" "Yes," I replied. She then told me to lie facing the back seat, and to put my hands behind my back which I did. The trunk lid opened and a pair of handcuffs were placed on my wrists, securing them behind my back. Then she and two other women pulled me from the trunk and stood me on my feet. The two women proceeded to lead me away through the cool night air by the arms, and shortly before we entered a house I heard the automobile's engine start, then the sound of it driving away.

Once in the house, I was led down a long flight of concrete steps to a basement deep below the house. My wrists were then freed from the handcuffs, and I was told to remove the mask. I found

myself in a very large, windowless, dank basement. It was dark except for a candle burning in the corner where I had been brought. Before I could familiarize myself with the new surroundings, I was told to remove my clothes. It was quite humiliating to see that the "women" who were attending to me were in fact young girls, about twenty years of age. As I was removing my clothes, I noticed that near my feet a two-foot length of heavy chain extended from the floor, the remainder of it having been encased in the solid concrete floor. Then out of the darkness appeared a tall, very muscular, well-built woman in thigh boots. She held a ring-like metal contraption in one hand, a long leather whip and a long, fat strap-on dildo in the other. The sight of this whipmistress terrified me, I could not suppress my trembling. She instructed me to step over to, and straddle the chain on the floor, put my hands on the back of my head, and to not move them for any reason. She ordered me to lower my eyes to the floor, I did so immediately. One of the young girls then stepped up to me, placed one palm on my chest to steady me, tightly grasped my testicles with her other hand, then said "Don't move your hands!" to me as she yanked downward on my balls viciously. I let out a gasp and a loud whimpering groan as she brought me to my knees unceremoniously. "Did that hurt?" she asked, as the other girl moved around behind me. I was too scared to answer, so I just knelt there sobbing. The two girls then began to manipulate the device that the woman had handed to them. They placed it about my neck, as I realized that it was a steel collar with cuffs chained to it which they fastened firmly about my neck and wrists. The wrist cuffs were each attached to the collar by a foot of chain so that my hands were restricted to the vicinity of my face. I was powerless to escape from the fetters. I once again bowed my head and began to tremble in anticipation of the humiliation and chagrin that was to come. "I want you to beg me to release you" the taller of the young girls said to me. I stammered, unable to say anything. "You have disobeyed me" she sneered. "Look at me!" she directed, as she positioned herself in front of me. When I did look up, she was wearing the dildo, tying her flowing hair back as the other girl rubbed lubricant on the head and shaft of her perennial erection. It was strapped firmly onto her vibrant, athletic body.

I began to proffer pleadings, but was too scared to make any sense. "You deserve discipline!" she decreed as she reached down and fed one end of her heavy leather leash through the ring at the front of my collar. She paired the ends together, doubling it up lengthwise, then tugged on it, dragging me over to the "rape chair." She pulled me up onto the metal frame, and securely tied the leash off, out of my reach. I was forced into a wide-open position on the frame, only able to grasp hold of the rung near my forehead as I tried to relieve the pull of the collar on my neck. The girls then pulled my knees up toward my chest and suspended me with heavy straps under my thighs, designed to keep me off balance and immobile. Finally they brought my ankles even further forward and

secured them with cuffs, leaving my feet suspended in mid-air. Perched in this "doggie style" position, I was helplessly vulnerable. "You are here until you learn to obey unerringly and without hesitation" she specified. The other young girl then retrieved a gag and fitted it to my head, pulling its straps so tight that my mouth was completely sealed. "You will not be released until then" the girl added. The next thing I knew a bridle was being attached to the ring on the rear of the collar, then left lying across my back. I felt the girl grab hold of my ass cheeks and pull them apart as the head of the dildo touched my rear orifice. She then firmly grasped my hips in her hands and thrust forward powerfully as she mounted me, driving her stiff, fat, 10" long rubber cock up my virgin hole in one savage, penetrating stroke. My eyes bulged, and I let out a muffled whimper as I jerked helplessly about, in a futile attempt to escape her cruel onslaught. She continued to unmercifully and energetically hammer me, bringing her lithe pelvis in contact with my buttocks with almost every thrust as she kept a taunt grip on the bridle from my collar. I noticed that there were now nine women and girls standing about, observing my predicament which entertained them.

When the fifth woman had finished raping me for the pleasure and entertainment of the other ladies, she removed me from the frame and dragged me back to where I had been collared. There the whipmistress grasped the open lock that hung through the last link of the two feet of chain stretching from the floor. In one fell swoop she laced it through the ring on the front of my collar and snapped it shut. I was left lying on the floor blithering, whimpering, and incoherent. I was sobbing in delusional agony at the dilemma I was facing. Then a spreader bar was lowered from the ceiling, and the whipmistress attached one end of the bar to one of the ankle cuffs. She and another woman then forcibly spread my legs painfully wide as the other ankle cuff was attached to the opposite end of the lengthy spreader bar, leaving me face down, my feet suspended in the air. The whipmistress then began to whip my buttocks freely. I struggled against the lashes, but to no avail. I couldn't avoid them, and I couldn't plead for mercy through the tight gag. I was completely at her mercy, and there was none. She ordered me to shut up and quit resisting, but I couldn't, so she just whipped me harder and harder and harder until my ass was covered with stinging, burning welts. I could no longer see because tears were flowing like a river and my voice was nothing but muffled, whimpering garbles. The whipping had ceased for about five minutes when one of the other women came up and addressed the whipmistress, "May I borrow your slave for a while, I need to teach him something." This other woman then positioned me so that I was face up, back on the floor, with my ankles hanging from the spreader bar. Then she reached for an electrical shocker, applied it to my penis and pressed the switch. My body convulsed with the agony of the powerful jolt. I reached out frantically to stop her, but my hands could only move to the middle of my chest. My head thrashed from side to side as I was

driven temporarily insane by this incredible torture, but there was nothing I could do to thwart her entertainment. She looked down at my protruding eyes and frantic face and smiled as she said, "Look he enjoys this!" With that she held the head of my cock in the fingertips of her free hand, then pushed and held the switch on again as she ran the electrodes up and down the length of my penis. Then she clutched the base of my penis between her thumb and forefinger and held the switch on again as she ran the electrodes back and forth across the head of my penis repeatedly as I thrashed about. When she stopped, I was gasping, and writhing in pain from the excruciating shocks. She lowered my feet to the floor, then sarcastically stated "Don't go away, I'll be right back", as she disappeared into the darkness. While she was gone, another woman picked up the candle from the table and approached me with it. She knelt down and grasped my penis with her free hand and inverted the burning candlestick, causing it to flame up. The hot wax began to rapidly drip from the enlarged flame. She held the tip of the dripping candle over the head of my punished cock and rotated the candle in her hand to make the flow of wax maximize. Once she had coated the top of my cockhead, she bent my penis back and dripped the searingly hot wax over my glans, enjoying the trauma she was subjecting me to.

A couple of minutes later the other woman reappeared with a steel plate, baby bottle and a riding crop. She removed the gag from my mouth, released my ankles from the spreader bar, then asked me, "Would you like for me to massage your cock with that shocker again?" "NO, NO, PLEASE!" I exclaimed, begging her not to use it on me again. My voice warbling, tears profusely streaming from my eyes. "Then you will need to learn to obey me" she said. "I never disobeyed you Mistress!" I exclaimed. "You had better obey me without question in the future" she said. "Yes ma'am" I concurred. She handed the plate to me and said "I need to take a shit, and I want all of it on this plate. Do you understand?" she asked. I lowered my head and nodded obediently. The other women gathered around to watch the spectacle. She turned around and hiked her skirt, revealing her bare buttocks, then squatted right in front of me. "Are you ready Toilet?" she asked. "YYY...Yes Mistress" I replied. I held the plate beneath her, watching her anus open up as she let out a sigh of relief and delivered a fat, 12 inch long, hard, chunky slab of her warm "fudge" onto the plate I was holding. After a few seconds she told me to put the plate down. Then she raised up a bit and said, "Pull my cheeks apart and lick my asshole clean." I struggled against my wrist restraints to gently separate her cheeks so I could lick her butthole clean. Then I released her cheeks and bowed my head as she stood up and dropped her skirt. She turned around, then I felt the sharp sting of the crop against my left cheek which made tears well up in my eyes immediately. I trembled as she asked, "Don't you know how to show appreciation for being granted the privilege of licking my asshole clean?". "YYY...Yes ma'am" I

stammered as I tried to keep from weeping openly. Then she used the end of the crop under my chin to lift my head up until I was looking her straight in the eyes as she asked, "Why didn't you suck my asshole out instead of just licking my cheeks clean?" I knelt there too scared to respond. She continued, "When you have the honor and privilege of using your tongue as a woman's wipe you had better learn to dive it deep into her and lick and suck her hole completely clean before you kiss her cheeks clean." "Yes Mistress" I retorted, afraid to say another word as the other women stood there giggling to themselves. "Hold that plate in your hands" she ordered. I struggled to lean over and pick it up without further hesitation, my hands tethered only a foot from my chin. "NOW EAT IT!" she exclaimed! I trembled at the thought. "OPEN YOUR MOUTH" she ordered as she nudged my head forward with her crop, pushing my agape lips right to the surface of her delicacy on the plate. "TAKE A BIG BITE" she directed. My tongue slipped between it and the plate, lifting it up and guiding it past my lips and into my mouth until I possessed a mouthful and could take no more. Then I bit through the chunky slab and closed my lips. She then used the crop under my chin to push my head back, and then around, so that I was looking up at all the women there as she said, "Chew with your mouth closed and don't stop until I tell you to!" I dutifully obeyed, chewing her chunky present into a soft mush for what must have been five minutes. Then she stood in front of me, playing with the shocker she had so earnestly tortured me with, and gave her harshest order yet. "SWALLOW IT TOILET!" she demanded to the accompaniment of giggles and laughter from the other women. I had no choice but to flush her shit down my throat, into my stomach. Tears of humiliation and shame flooded my eyes and my body trembled as I heard her say "TAKE ANOTHER BITE TOILET, and if you don't chew each bite as well as you did that first one I will torture you with this shocker well beyond your wildest imagination." There was no alternative but to obey. When I was half-through with my service she took the large baby bottle, squatted down and placed it between her lips. Soon the sound of her hot pee filling it up was heard. She stood up and replaced the nipple on the top of the bottle. Once I had swallowed the last of her gratuity, she said "Tilt your head back and close your eyes." Once I had, she placed the nipple into my mouth and said "Hold onto this, but don't open your eyes or move your head until it is empty. Suck it dry, washing your mouth and throat out with it as you swallow." Once it was empty, I removed the bottle from my mouth and lowered my head. The younger of the girls who had escorted me into the house was the only one still there. I begged her to release me, tears streaming from my eyes as I begged and pleaded with her for my emancipation. She coldly told me that she had no intention of releasing me, and couldn't even if she wanted to. She informed me that the only lady who had a key to the lock on my collar was the whipmistress. "You don't understand, do you?" she said, "You were brought here to learn how to serve and YOU WILL NOT BE RELEASED until you have

completed the training. You will NEVER eat anything else while you are here. This is only the beginning, in time you will learn to accept your place here." She picked up the shocker, then said "Get your plate Toilet, I have something for you." Then she turned around, hiked her skirt and squatted over the plate I was holding so obediently. . .

Roger, you can say more in 6 words than I can in a dissertation. If a career in baseball will end the possibility of his growing up to be an orange plucker like his old pompous bag of bleep, fat daddy Bob, then I wish him well, And I thought of this. The kid could introduce baseball to Scandinavia. If Badblood's wife, Norskie Thunder, leaves blobby Bobby and goes back to Norway with the kid, Harrison could start a team up there based on his stateside experiences by calling it the Oslo Oranges. Can you imagine "the wave" up there? 50,000 Norwegians standing up, swaying and waving icicles?

4981. stamp design

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-26 00:00:00 UTC
From: "Marc A. Schneider, Psy.D." <drmarc@wwa.com>
Message-ID: <jjAX4.114$vP1.5380@ord-read.news.verio.net>
Source record: 110398

I had made a posting to inform hams around the nation that I was seeking a stamp to be designed to commemorate ham radio. I had also indicated that I had not yet heard from ARRL after about two weeks. As many of you may know, Jim Haynie has been busy in many areas and not near his desk. I have heard from him and Steve Mansfield (legislative and Public Affairs dept.) with several e-mails today (Dayton is now over).

ARRL is giving this matter its attention and has a call in to the Stamp Committee. Legislative issues and possible errosion of having the welcome mat out for us is an issue to be considered in how ARRL can address this issue.

Apparently some individuals have e-mailed ARRL with a tone suggesting that ARRL did not want to do anything about the stamp. If any of you had that impression you were mistaken. I had e-mailed Jim and not heard from him in about two weeks at the time of my posting. I indicated I had not yet heard from him as of my posting to the news groups --- NOTHING MORE THAN THAT.

Please be assured the matter is being addressed by ARRL.

I do not want ARRL to jeapordize its political potential by getting the stamp done at the expense of spectrum protection or some other needed legislation. How ARRL can help out on the stamp without creating a problem is part of what they need to look into.

I am asking hams around the nation to indicate to the stamp committee that there is strong grass roots every where for the stamp. The only contact to ARRL that might be needed on this matter is an apology for those that got the wrong idea about ARRL's attention to the stamp issue.

Andrew,

I would avoid multi-band commercially made antennas. They are always
less efficient than dedicated single band ones, besides being very
expensive. The one exception to this is an antenna fed with balanced,
tuned feeders, fed from a good balanced antenna tuner. Such an antenna
will work on most ANY hf band, and efficiently. It is my choice for
multiband with a single antenna. The best arrangement for general use
is a center-fed horizontal wire as long as you can make it, as high as
you can make it. A length of just 66 ft will work well on 40M and up,
and can cost almost nothing to make.
Don't purchase a tuner. You can make one fairly easily with a
capacitor and home made tank coil and link coupling. See any ARRL
handbook of recent decades. The split tuning capacitor for this will
cost you a fraction of the cost of a multiband vertical antenna, for
example.
If you have VERY limited space, try Hustler mobile whips and
resonators, or even a pair of them back to back, making a loaded short
dipole. Quite lossy, but still better than most anything indoors, and
not too expensive.

Here's help. Konel is the Polish branch of Philips. It's located in Lublin, Poland. Either write to Konel, ul Kiwerskiego 3, 20-240 Lublin, Poland or e-mail them at konel@konel.pl
By the way, "ul" iare the first two letters of the Polish word for "street." I believe it's Ulitza and not "streetski." I'm not sure. My father was born over there but won't admit it. It was Austria-Hungary when he was born and became Poland after W.W.I ended. He decided to emigrate to America-too many Polacks he claimed. I told him that wasn't nice and he belted me in the chops.
Good luck and it was my pleasure helping you.

The interesting thing is that the R/S speakermic that's designed for the 202 and 404 has a common-ground connection - I wonder if there's a warning about using this mic with the older radios?

Why does HORSEHEAD suckup to Charles so much? Here are a few thoughts I have on the subject:

1. The father of ELEPHANT FACE died of LUNG CANCER after smoking like a fireplace for 40+ years...Could KC8JBO "see" his father in AF2Y?

2. Both do not work any sort of job......The unemployed like to stick together.

3. Both are JEWS.....Another case of sticking together.

4. AF2Y uses ham radio & the internet to give you his thoughts.....WIDEASS is too TIMID to get on the radio!!!!!

4986. Handling of a Road Emergency?

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-26 00:00:00 UTC
From: David Snyder Hale <david@isi9.mtwilson.edu>
Message-ID: <8gmr9a$ig6$1@agate.berkeley.edu>
Source record: 110403

I'm wondering what is the proper way to handle a road (or other) emergency.

This question comes up because a few days ago I happened to be the only witness to a serious traffic accident, in which those involved needed immediate medical attention and I was the only person able to seek help. I did not have a radio in my car.

I ended up having to drive a few miles back to where I had previously seen a construction vehicle, and the operator of that vehicle was able to radio the police (or, I think his dispatch, rather, who called the police).

I feel like I wasted valuable minutes in doing this, and that I could have possibly done something sooner if I'd had my radio. However, looking back, I can't say that I would have known the best way to accomplish this in the least amount of time. I would not have known, off-hand & on the road, how to access an autopatch repeater, so I couldn't have called the police directly. I could have hit at least one repeater from where I was, but how should I have gotten someone's immediate attention and assistance?

Although I'd like to feel I could have done more, and sooner, I can't be sure that if it happened again I'd know how to do so.

I do intend however, to install a mobile antenna in my car and carry an HT in the glove box, and I'd like to learn how to handle any future emergencies better.

I appreciate hearing anyone's comments on this. Thanks.

David,
The best thing to have would be a cell phone. Direct
connection to the police etc. Next best might be a 2 meter
radio, if your in range of a repeater. Then, probably the
next best would be the CB band (yeah, yeah, but it works).
Probably the least ideal thing to use would be HF. Probably
get a lot of answers, but not locally.
All things considered, you probably did the best thing.
You might be suprized how many people wouldn't know to do
as you did, but just stand around doing nothing.
It's also normal to feel like you didn't do enough. If
you 'do' what you know to do, and DON'T 'do' what your not
competent to do, your doing what your supposed to do. Another
way of saying that is that you should do anything that will
help (that your competent to do), but don't do anything that
will hurt. Don't worry about it, 'you done good'.

I would have just broke in any converstaion going on,or gave a couple of
calls for anyone out there (if repeater quite)
even try 146.520 (simplex) and explained what was needed and where.
I've heard that there are even some repeaters opened for dailing 9-1-1 or
*-9-1-1 for emergency help.
In my case,I have my codes and 9-1-1 programed into memory, so i don't have
to fumble around looking for
those danged codes.But al in all,if you call out you need 9-1-1 called you
should find someone by the 3rd-4th
repeater,which shouldn't take no more than a minute.
BUT REMEMBER THAT IF YOU CALL THRU A REPEATER TELL THE DISPACTER
THAT
YOU ARE CALLING THRU AN AMATURE REPEATER ! Because enhanched 9-1-1 (e911)
will show
the address of where the repeater is located NOT WHERE YOU ARE,if you lose
the repeater the dispacter
might send response team to that address !
thats what i would do.

I called Yaesu with the same question. They say you "remove" a frequency
from memory by using the masking memories procedure. See Page 45 of the
operating manual. It is not truly removed. It is just masked until you
recall it per pg 45 OR overwrite it with another repeater.

Jeff,
I am happy to hear the Badblood is hognizant of everything. He's confused. I had said I went to Colombia, the COUNTRY for Spanish studies. The University of Bogarti¿½ right off Casablanca Plaza. And I never said I graduated with a 4; I said I was there 4 years in a 2 year course because of problems with the subjunctive mood. The active mood I had no trouble with because my cousin Wilbur Schwartz, who played clarinet next to Tex Beneke in Glenn Miller's stateside orchestra, was right in the studio when Jerry Gray, Glenn's arranger, gave each of the sidemen the sheet music for "In the Mood." So help me.
In the early '80s, in Orrie DeNoyer Auditorium on the campus of Bergen County Community College, Tex conducted the Glenn Miller Orchestra in a concert tribute to Glenn and before each of the sideman took their seats on stage, Tex introduced several who had played with Glenn in that original orchestra.
Can you imagine my amazement when he announced, "And now, having flown in all the way from Encino, California, here's the man whom Glenn said turned everything around for him--Wilbur Schwartz?"
Dammit I went wild because I had heard older family members of mine talk about Wil for years and about five years before I met him, I had obtained his address from Dave McKay, the executor of Glenn Miller's estate, wrote and got a reply. Being an avid Glenn Miller fan, I still treasure that letter.
The concert began at 8:00 and by 10:30 Tex told the audience that the guys were going to take a break for 30 minutes and I rushed to the stage to see if I could stop Wil from going backstage. I succeeded.
For the whole half hour we talked and sure enough he remembered from his childhood the same east coast relatives with whom I was raised. Furthermore he told me intriguing stories about Glenn, a few of which I'll relate to you but keep it quiet. He was so arrogant he refused to take the same elevators in any hotel with his sidemen. That's the God's honest. Here's another I didn't believe until I read Glenn's biography a year later.
GLENN MILLER FLUNKED FRESHMAN MUSIC COMPOSITION AT THE UNIVERSITY OF COLORADO and in order to be re-instated, was told to write a composition over the summer which then would be graded by the music department in late August and if found satisfactory, would get him back in.
Do you know the composition he composed? Never amounted to much but it did re-instate him. It was called "MOONLIGHT SERENADE" which of course became his signature song for his entire career.
Wilbur told me that he and the guys were jamming one day and whatever they were messing with sounded really fine. In walked Glenn for rehearsal who asked Wilbur the name of the piece. Of course it had none. There was a telephone on a tripod alongside Glenn's position as trombone playing bandleader. The guys were jamming in a famous NYC hotel in which that night

they had a gig. Just as Glenn was intent on hearing the melody again, the phone rang, Glenn picked it up and the voice at the other end asked,"What number is this, please." Glenn looked down at the labeled rotor as the guys were jamming and said, "Pennsylvania 6-5000" and that's how that phenomenal song got its title.
In 1940, one out of every two nickels dropped into every jukebox in each of the 48 states was for a Glenn Miler record! Whoa.
The intriguing and enlightening nostalgic info I just gave you, Youngblood just dreams about. I live it.
Doc,AF2Y

4995. Re: Better to have 1 antennaa, or several single band?

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-26 00:00:00 UTC
From: Joe Schlatter <joe@schlatter.org>
Message-ID: <392f2925@news.planetc.com>
Source record: 110412
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur.equipment

First, use a wire antenna, put it up as high and clear as you can get it. Feed it in the center with ladder line -- balanced, 450 ohm line. Buy or build a tuner to match your rig's unbalanced 50 ohm output to the ladder line. A standard installation is 135 feet of wire, split in the middle and center fed with the ladder line. Check out QST ads for a device called a Ladder Lock -- it's a neat plastic device that clamps onto the ladder line, anchors the antenna wire, and allows you to solder the ladder line to the antenna wires. In fact, you can find in the QST ads a combination deal, 100 feet of ladder line, 135 feet of antenna wire plus a little for the end insulators, end insulators, and a Ladder Lock.

Do not get to excited about a lot of the stuff you will hear about how to run the ladder line. Just keep it a foot or so away from metal -- like the gutters and downspouts. My shack was in my basement, I punched a hole in the concrete block wall, pushed the ladder line through, filled the hole with foam sealant, draped the ladder line across the roof, up to the antenna, and worked the world on 100 watts.

135 foot long antenna will work on 80 meters and higher; it will load on 160 but is very narrow. 67 feet of wire, center fed, will handle 40 meters and higher.

Try not to shorten the ladder line -- for some reason, this antenna likes about 100 feet of ladder line.

Now, if you can get a tower up, the optimum is single antennas -- yagis -- for each band. However, that gets heavy and expensive -- big rotator, lots of cable, big tower, etc. If you must settle for what most hams have, put up a 50 foot tower and stick a good tri-bander on it. The 7 and 9 element Cushcrafts are good; even the 3 element Cushcraft will do an adequate job. Moseley's have a good reputation but I have read some very critical comments about them of late. Telrex makes a fine antenna also.

A 135 foot wire, fed with ladder line, and a 50 foot tower with a good tri-bander (and some VHF or UHF antennas, fed with 9913 with tower mounted receive pre-amps) will yield a respectable antenna system without breaking your bank account (too much).

Can't dig a hole and fill it with concrete for the tower and cover your property with guy wires? Then buy enough tower sections to clear the top of the house. Bury a tower base in the dirt (or concrete) at the side of the house, and use house brackets to mount the tower to the side of the house. With a two story house, you can get 30 feet of tower -- not the best but it'll do until you win the lottery.

Last time I will ever go.

There was actually someone in the flea market selling BEANIE BABIES!

And the Hamvention has the *balls* to charge a STEEP admission fee ?

Just to see some jerko selling Beanie Babies and overpriced beat-to-shit
gear?

Hamvention can go collectively FRIG THEMSELVES as far as I am now concerned.

Jeff, thanks for the words of wisdom, but I am extremely cognizant of the undergraduate and graduate school programs. No, Doc never earned a degree from Columbia university, although he has claimed to have attended Columbia and graduated from there with a 4.0. He also claimed to have graduated from dental school there as well. I contacted the state of N.J. Dept. Of Professional Regulation, and as I had guessed, Doc never attended Columbia University. He did graduate from NYU, not a bad school, and one that he certainly have never been ashamed of. HAMMER007

Hi Andrew,

I have Yaesu folded dipole for HF, Force-12 C2SS tribander YAGI (20-15-10),
Comet CA-52 for 6 meter (bad antenna!),
Hygain V2R for 2m & V4R for 70cm, Diamond X-500 dual band (144.430), and
Cushcraft 26B2 for 2m.

All served best for what their design intended to do! (Except for Comet
which is a real bad one).

You can see the pictures in my site: http://www.geocities.com/reinhardsual

Regards,
Reinhard Sual

Andrew,

I suggest your homebase to have specific antenna.
I have Yaesu Folded Dipole for HF, Force-12 C3SS tribander Yagi, Comet CA
for 6m,
Diamond X-500 for 144 & 430, Cushcraft 26B2 for 2m.

All antenna server best for what their design spec intend to be....

You can see the picture on my web: http://www.geocities.com/reinhardsual

Speaking with a stricly neutral point of view:

Jesse Helms is not exercizing Chutzpah. Instead, he is doing what the labor unions
should have done but were apparently too stupid to do. The unions most likely
knew that they would lose on the issue but they fought it anyway, only to lose,
thus further eroding their own image of having any influence in a *friendly*
administration. In doing so, they have already been marked with how poorly they
would deal with labor issues in an *unfriendly* administration under Republicans.
Very stupid. They should have bargained with the strength they did have and negotiated
for such things as not being able to fire striking workers, for example. I believe it was
very naive of them to go for all or nothing because they knew they would lose anyway
and got exactly that: nothing. Now, Jesse Helms, like him or not, is a highly effective
negotiator. In fact, he may even be for the trade deal, although that is not really important.
He knows which way the vote will go, especially since a majority of his own party supports
it. But Jesse Helms sees opportunity to bargain for a little relief for the tobacco farmers,
get some more aid for Hurricane Floyd, displaced textile workers etc. etc.. It only looks
like chutzpah, Doc. What you are really seeing is a smart politican and this is the sort of
thing that has kept him in office all these years.

What about the Democrats, Wellstone from Minnesota, and Gephart from
Missouri?
Feingold from Wisconsin? Well-intentioned opposition, for sure, hmmmmmmmm?
Certainly not tainted with that kind of opposition described by the
invective and vituperation
for which AF2Y is notorious.

> ignore one billion people who are trying to emerge as a global economic
> power which they will do with or without the U.S.A. Let's allow all that
> trade go to France, England and others. Let's hurt ourselves to appease
> Helmsmanese creeps.

It still surprises some that we've been approving NorTrStat for China
yearly, since maybe B4 even
Sen. Helms was born. What the pols want to do is obviate the yearly
kefuffle over the vote.
So either way, approve or disapprove, the net result is biz as usual, as it
has been for years.

> Now get this: Helms doesn't want to do business with China because of
their

I oppose the NorTrStat because of the money it affords the Chinese weapons
programs and the
subversion-of-foreign-politicians programs, evidences of existence of both

programs
being, sadly, imv, available in this country now. Let the Chinese earn the
money to hang us
capitalists from some other rockier field. Now, if only I could sell just
one aspirin to each Chinese
just once ...

QST--

You are invited to join one or all of the following lists on onelist. All these reflectors are e-mail based, and moderated so that no spam, porn, off-topic, or personal-offensive posts are sent out. You will receive no off-list e-mails by subscribing: again; no spam.

These lists (with average recent subscriber sizes) are:

ANTENNAS@ONELIST.COM 200 members
CROSSFIELDANTENNA@ONELIST.COM 75 members
FRACTALANTENNA@ONELIST.COM 250 members

Please review the descriptions at

http://www.onelist.com

Please note the CFA list specifically deals with this antenna in an objectively critical fashion and no posts will be allowed that make grandiose claims without supporting data presented. To date, no data has been presented which requires the extraordinary claims made by some pundits: there is no evidence for better performance than any other small vertical antenna (and that performance is poor).

To subscribe to any list, either go through the process at onelist, or to skip the process just do:

---------- -subscribe@onelist.com

where the ---------- is the name of a given list (such as 'fractalantenna')

A few weeks I went shopping for trousers and shirts and everything I bought
had foreign labels on them; made in Taiwan, Philippines, Costa Rica, Mexico.
So cozying up to a billion people isn't going to introduce anything new to
the USA but will give us a chance to get into THEIR untapped voluminous
markets to offset and even gain an advantage over what they export here.
Jesse Helms is YOUR type of man, you say? Jesus, how can you admit it? The
man is the epitomï¿½ of what America shouldn't be about; an ingorant,
intolerant, selfish, arrogant redneck slob trying to rejuvenate the slave
holding ante-bellum South. And I'll be you're the type of guy who thinks
flying the Confederate flag over the S.C. State House is cute, right?

So it IS the guns you hate.

You don't mind if the kid STONED his teacher, but the fact
he used a GUN is ABHORRENT to you.

Glad to see you are making your TRUE COLORS evident to anyone
over the age of four...

PS: There isn't a way to get the criminal to give up his weapon,
and if you do, the black market supplies whatever is in demand.

AGAIN, get rid of YOUR gun (if you have one) and make it UNDENIABLY
CLEAR to the criminal YOU are UNPROTECTED so he can ph*ck YOU over,
and then MURDER YOU not ME.

Practice what you preach, and gamble your OWN ass with YOUR scewy
ideas.

Also, thanks for helping by example. You now have come to the
realization that the conflict is PEOPLE, not the implement. Stones
or laser-guided weapons, we kill because of who/what we are.

And NO, I do not like it. But I REFUSE to be unarmed.

This is gonna make you happy. After Giuliani dropped out of the Senate race due to a major health problem and was replaced by Rick Lazio, a G.O.P Congressman whose name reminds me of Paul Henried's character, Victor Laszlo in the film "Casablanca, " Mrs. Clinton, according to the highly accurate Zogby poll led her opponent 46%-32%.
Let us staunch Republicans clap our hands because on May 27,2000, it is in a statistical dead heat.
The "carpetbagger" has no business up here trying to represent the great state of New York. Any woman, even the First Lady, who sits idly by and says nothing while her husband is openly having sexual contacts with a White House intern plus others and actual sexual relations with a celebrity grabbing trollop such as Jennifer Flowers, is no more than an opportunistic power seeking broad who should have dumped Bill years ago instead of hanging on to gain an advantage. Hillary is unworthy of holding any public office let alone a Senatorial seat from N.Y.State and three cheers for our next President to be-Al Gore.

A new amateur radio website would like information on your radio club.
The new website: http://www.callingcq.com will be up and running sometime
around the first of June. We will feature a swap and shop, special event
section as well as information of local radio clubs. We would like for club
officials or anyone that has all of the information on the club to send a email
to callingcqweb@aol.com with the following information: Club name, URL address,
and Contact name and email address. Don't worry about duplicate entries we will
filter them out.

Thanks very much for your support and we will be soon asking for submittal of
ad's for the hamfest section. If you can't wait go ahead and send it, we will
get it on as soon as possible.

Are you kidding? You expect to get hold of taped transmissions made from Air Force One on the day that it was carrying Pres. and Mrs. Kennedy to Dallas or possibly flying back to D.C. carrying the deceased Pres. Kennedy, the new Pres. Johnson and the widow Kennedy? The value of such tapes would be staggering therefore if there were originals, they were sold a long long time ago to the sound archivies department of the Library of Congress or to the Kennedy family. You'll win a Power Ball lotto before you ever possess those tapes.

Hello AF2Y-

This is something I have been researching for quite a while. I have
been able to acquire partial transcripts through government sources and
a couple of books. Parts of the transcripts I have have been redacted
and I am extremely curious as to why. Your summation of my request
could be about right. I have heard that quite a few private operators
were in the habit of listening in on Air Force One conversations
whenever the President was in the air. I have heard specifically that
one such group was in Colorado. As this is not the type of material
that someone would throw away, there are probably some operators out
there possessing full or partial copies of these records. I also know
the Army Signal Corps has it all, but they are not too cooperative.
The money value of this material would not be much. I am looking only
for my own curiosity. Thank you for your reply. I will keep
looking...Rick

Source record: 110295

Your logic is illogical. Let me give you an example.
We'll use cigarette lovers. It seems everywhere we look, they're being discriminated against. Hopefully in a few years the only place they'll be allowed to smoke is at HOME? Now if you speak to a puffer, he or she will ask, "Why's everybody always picking on me? I got rights. People die from everything so why come down on me?"
Why? Because CIGARETTES ARE A PUBLIC MENACE NOT ONLY TO THE SMOKER BUT TO THOSE AROUND HIM OR HER! Get it? A PUBLIC MENACE. Public menaces KILL. Get it? But rights are being violated, correct? Naturally some puffers will stand up and proclaim, "The founding fathers had us in mind too."
BULLSNOT! Society has matured to the point by which certain rights have been proven to be certain wrongs.
Lax gun laws in this nation are a PUBLIC MENACE. Murders just waiting to happen. The kid would have never shot the teacher had:
1. he not had access to the weapon
2. had the weapon been a "smart gun" which prohibits anyone but the owner to use.
Things like kids carrying guns to school as a joke or taking guns into schools to murder classmates or teachers is REPUGNANT and MUST BE STOPPED one way or the other.
Three cheers for Smith & Wesson the first gun manufacturer that will implement the "smart gun" idea. It should become mandatory for all such manufacturers to follow suit and by God, it will be.
Governments are here in western civilization to SERVE the people and it's become quite clear that modern day America has gone crazy with violence and guns THEREFORE the government must not only SERVE, but SAVE. We refuse to save ourselves therefore legislation will be passed to do it.
As I wrote before, the R in NRA stands for RIFLE therfore it's become obvious it has deviated from being a reliable, responsible and honorable organization into one of gun running, militancy, money grubbing and complete incompetence ALL UNDER THE PRETENSE OF SAVING THE 2nd AMENDMENT.
BULLSNOT AGAIN!
The NRA attitude is as dangerous to the health and welfare of this nation as was that of the unchecked and murderous cigarette companies who had a RIGHT to kill us.
LIKE HELL with the latter and the time has come to make things mighty tough for Heston and LaPierre and Gore will do it. VOTE FOR AL!

Yes, in the past the ARRL has been a much needed and member serving organization. I became a member when I first became a ham in the 70's. However, in just these last thirty years I have seens, in my eyes, it become an orginization that now longer serviced the members, but expected the members to service it. It now caters to the equipment manufacturers for advertising dollars. My view is that it is a now a publishing house that also lobby's for it's publishing's area of interest on the side.

dAFf2Y sez:

<SNIP
Howie baby, let me explain. The enforcement crackdown in ham radio seems to have diminished the capacity and willingness of us to discuss anything on the air that might be construed as thought provoking, controversial and stimulating. Now whether Riley contemplated such a thing is mere conjecture but nonethelsss it's occurred and it just plain stinks.
>SNIP

Hi Howard,

I believe dAFf2Y has been enjoined by the Commission at least once, as evidenced by documents posted on the Rain report (search your choice of engine on it --it's easy), to stop doing that to which he blithely refers above as "thought provoking, controversial and stimulating". See the Commission's definition as a contrast.

What stinks, I suppose, is the leaks of putrescent vapors which Riley forced dAFf2Y to bottle up in his shack, instead of allowing him to pollute the ether with his sulphurous miasma. (Bite the bubbles, dAFf2Y).

Instead, we here are treated to his intemperate outbursts, which are protected, as they should be, under the 1st Amendment.

Right ON !
I cant stand her.
Facts:
She say she likes the Yankee's but will not go to a game in fear of being
Booed out of the stadium on TV.
Hollyweird freaks from East Hampton N.Y lead by Alec Bald_ _ helped
acquire that house she doesn't not live in.
Alec "the egomaniac bully" is originally from Massapequa N.Y ..... that
trader should keep to his business in California.
She has never been in the subway and needs a guide, maps and GPS to get
around.
In an interview on David Letterman she passed some questions about New York
all of them were taken from the statistics page of the map book she carry's,
having nothing to do with the issues here anyway.
With a unknown band and guest booked that day, guess who received all the
standby tickets for that seeded audience.
Personally I thing she may be a Lesbian, and may have other agenda's.
If she win's and you are a hard working white male hide your wallet !

I may feel the need to dig a trench filled with hungry alligators and a draw
bridge, around the house.
It was enough misery with Como, this could be worse !
She will put all the homeless felons, nothing to loose AID's Addicts, and
future oncoming subway train pusher's back on the streets.
I see my future in north east N.C if NYC reverts back to the sewer "hell"
again.

Now you've done it! You've said that the ARRL is a publishing company, for which Jeff Herman will post his tiresome essay on how it was founded as a business/publishing company.

I'd personally take it a step further, to say that the ARRL has a monopoly on the amateur radio publishing market. However, I doubt that the government will go after them the way they have with Microsoft.

Sorry Doc, slightly off Mark again. You see Bill and Hill have what is
knows as a "open marriage". There from the flower child generation,
remember?

Second point Doc. Hillary is no fool. She hitched a ride on Bill's
train way back in college. Knowing full well that she couldnt get as
far as a man could. Sorry all you femanazi's, but thats the way it
is. I didn't make it that way.

Third; She is feathering her own nest now. Because Billy is a
liability now and she will drop him like a lead potatoe.

NY and Hillary deserve each other.

Peter, don't be so melodramatic. You can't place gun and voting
rights in the same category as Morse. Morse never killed anyone!
(And no, code didn't kill the hobby).

A prospective ham still can't get on HF w/o having to pass a Morse
exam, so I haven't lost any battle.

The callsign was assigned by the government to a specific person. Therefore, what he is doing is illegally using government issued identification - no different than using somebody's SSN, driver's license number, or a number associated with any other identification.

Stealing somebody's identification is a criminal offense. Every state in the country has laws associated with false identification and stealing identification. If it is federal identification, it is a federal offense. Again, there are federal laws on the books.

Can the person do anything about it? I suggest that he do exactly what he would do if any other identification was stolen - contact law enforcement officials.

> from holding us all hostage?

The NRA is not a faceless entity that exists for its own purpose - it is people (Americans) who believe they have a right to own a gun. Are you accusing all those people of holding you hostage? If so, I suggest that you take it up with them.

> are coming out of chambers and barrels?

The sickness is coming from liberals like you. When I was younger, everybody owned guns. I grew up with a shotgun hung above my grandmother's bed. In spite of the easy availability of guns at that time, kids did not go around school killing each other.

However, today, it is becoming commonplace. And I blame that on liberals who insist that teachers have no right to control their students (don't want to hurt the bully's self-esteem). So the bullies control the schools instead of teachers, and kids are forced to defend themselves by bringing guns to school.

In every single recent case of gun violence in the schools, the violence was done by a child that felt there was no other alternative. They were pushed into getting a gun by a bully - be that a student or a teacher (as in the case you describe - a student unfairly suspended the day before graduation for throwing water balloons).

If you want to get guns out of the school, get the bullies under control by returning power to the teachers (a four foot paddle is effective). That way, the victims of these bullies will feel they have an option other than a gun.

And insure the teachers are under control by realistic enforcement of the laws. Fire the smart-ass teachers who abuse their students emotionally and stand behind teachers who apply the paddle fairly. Right now, we have the opposite - many teachers who are smart-ass assholes and laws against strict punishment of out-of-control students.

So you want to just throw out the 2nd amendment? How about some of the other amendments? In fact, why don't we just make things easier - we can throw out the entire constitution and you can rule the country. That way, you can have the country that you want and everyone else can be miserable. America - the land of AF2Y.

Jeffrey,
To answer your questions and accusations;
1. I don't have, or need an assassination list. In wanting to keep the second amendment to the U.S. Constitution, I join several other people through out history (Jefferson, & Franklyn to name two).
2. If kids had gone around shooting teachers in 1776 they would probably been hung. Penalties were much stricter then. I do not advocate hanging children.
3. I am not a "Second Amendment gun-owner", I have never belonged to a militia.
4. I do not talk about using "my" guns against the government. Mr. Jefferson, and Mr. Franklyn sure did though. And by the way, they were both 'insurrectionists'.
5. No, you would not have to violate the Constitution to rise up against the government. Read it again, you missed several concepts the first time through. The whole Constitution speaks of 'checks and balances', does that phrase ring a bell?

I do not advocate violence. I think this would be a much better world to live in if violence were not necessary. I am a realist, though. Since this is not a 'perfect' world, and since human beings are naturally violent, I think it only prudent to have the ability to respond to violence with violence in the proper manner. I think this is a matter of common sense, or may be not so common sense any more. This is a violent world we live in. When you remove a persons ability to provide him self with a means of self defense, you have sentenced that person to live in fear. I certainly would not call that an acceptable position, I don't think any reasonable person would. You are ultimately responsible for your own self protection. If you are not willing to accept that responsibility, then you deserve what you get.
I do think that violence is an appropriate response in certain cases. I'm sorry you don't agree with that, but your lack of insight is not my problem, it's yours. I am more than willing to be reasonable, but only to a point. When I have no other alternative, I see nothing wrong with resorting to a necessary level of violence. That does not mean that I enjoy violence or go looking for it.
My suggestion to you, is to get some experience in the 'real world', then tell me how I should live in a perfect one. The two are not the same, and your attitude reflects which of these two worlds you live in. We can have a 'perfect' world when all people in the world are 'perfect'.
Until then, if I were you, I would not try using your 'perfect' world

ideas on the 'street'. Somebody will 'mug' you.

At least you admit that it is discrimination - something that few anti-smokers will admit. It is amazing that liberals will stand beside criminals in prison and scream for civil rights - but are the first to advocate the removal of civil rights from cigarette smokers. Selective civil rights?

The simple fact is that smokers don't fit into the liberal's sanitary little world. Drugs do. Criminals do. But not smokers.

> Why? Because CIGARETTES ARE A PUBLIC
> MENACE NOT ONLY TO THE SMOKER BUT TO
> THOSE AROUND HIM OR HER! Get it?

Are smokers more of a menace than the criminals liberals work so hard to release from prison? What about the other things in society that are a menace? Are you going after them next? What's next on your list? Devices that generate uncontrolled RF energy (radio)?

<SNIP

It's amazing to me that dAFf2Y duck must believe that the ready availability of guns today, with only a few government forms, checks, waiting periods, IDs, fingerprinting, other infringements, etc., is responsible for all the school shootings these days, compared to those halcyon days of yore, say the '50s and '60s, when all those school shootings must have been caused by the widespread unavailability of guns at the corner gas station, most any hardware station, mail order ... wherever.

dAFf2Y duck also probably believes that ordinary folks like you and me turn into slavering, ravening, slaughtering butchers at -- yes! -- the sight of a gun! -- and, Hyde-like, change to normal when -- yes! -- we are removed from the sinister influence of the weapon. This first metamorphosis is, I suppose, his explanation for those notorious mass murders he deplores at -- gasp! -- gun shows.

GET USED TO IT, dAFf2Y duck. 80 million Americans own 250 million weapons. One per person! Better run and hide!

Yup, dAFf2Y duck, an explanation's in order, unless all you can do is dodge the birdshot.

Your quack, dAFf2Y. As you were.

I dunno what constitution you've been reading, Jeff, but I would like to hear from you how the following constitutional phrases: "enumeration of certain rights shall not be construed to disparage others retained by the *people*", "The powers not delegated herein are reserved to the states respectively, and to the *people*", the "right of the *people* to be secure in their homes, papers, and possessions", and the "right of the *people* peacably to assemble", all apply to the *people*, and this phrase:

"The right of the *people* to keep and bear arms",

according to you, makes reference to the *government*.

Explain *that* paradox.

So it's good with you that Teddy Kennedy gets assault-weapon-carrying guards to protect him from fists and knives in Massachusetts, where guns are banned, and I gotta use my fists for self-defense in BeanTown?

What and where is your protection? Your own Hawaiian Supreme Court has held that *failure* of the police to provide protection is *acceptable*, ie, not actionable. See Freitas v. City and County of Honolulu, Pacific Reporter 2d edition, vol. 529, p.532. The Hawaii Revised Statutes, paragraphs134-1 through 134-18 limit your protection to your fists, against whatever your assailant brings to the fray.

WTH is your head? Do you think your assailant will allow you to choose his weapon?

Another glittering generality from the catalog of the politically-correct
revisionist obvious:

The Constitution only *might have seemed* correct *then*, so those of us
who *now* know better than the writers and the benighted populace (rabble),
will substitute our version.

How deeply buried beneath the pigeon-feces falling in the ivory bell tower
of academe does one have to be in order to be so insulated from the
rough-and-tumble?

Jeff, you have used that *You apparently can't stand the thought ... *
phrase to cess and excess. Apparencies are deceiving. What I do have
trouble with, and do stand against, is wholesale perversion of the
Constitution into modernist, elitist, revisionary claptrap, such as the
'emanations and penumbras', which, in my view, began with Marbury v.
Madison.

BTW, if what Peter sez re your support of CW is true, I'm with you, on
Rosinante's back, against that windmill.

Just picked up a Midland 70-924B UHF Repeater to be configured as a digipeater hooked up to a Kantronics KPC9612 Plus
It has a 15 pin accessory connector on the back which I would assume is for a tone panel or other devices. Does anyone have any specs or hookup diagrams for this unit? It would be greatly appreciated.

Thanks to everyone.

Jay.

5077. Re: Icom T7A vs W32A, and T81A

The W32A will be a better choice if you want to try to work any of the satellites with your HT. The ability to receive both bands at once is the clincher here.

BTW; I have owned all three radios. I have a 81A at the moment.

I am having a real bad problem with noise on my phone line.

Does anyone know of a web site or FAQ that I can check to learn the basics of home phone wiring?

Phone company says that there is no problem on their end, so I need some help on what to look for, what type of tools I would need, etc.

Thanks

This is VERY inportant. I am a dispatcher, as well as a ham. Also, explain to them that they have to let the repeater drop before they talk so you will hear all they say.

Very well put. However, don't be so quick to blame NCI for the demise of amateur radio. You could have put ARRL in place of NCI in your first sentence and it would not have changed the meaning of the rest of your post.

Been there. Done that. Got the T-shirt.

I taught a novice/tech class once. I was told that the objective was to get people to pass the test. Based on this objective, I taught basic memory techniques that were perfected by such experts as Harry Lorraine, Kevin Trudeau, and Tony Buzan, and applied them to each question in the pool. Everyone had fun, and everyone passed. I, however, was not invited to teach again because it was decided by the powers-that-be that I really wasn't "teaching" anything. This was despite the fact that the objective was to get people to pass the test, which I acheived.

It has long been my belief that at any hamfest, prices go down to normal right at the end. The "true bargains" were snapped up at the beginning, probably before you even woke up. At Dayton, bargain time is Sunday at noon, when the flea market is nearly over.

Dayton is a huge social event for many people. You can tell these people from those who want to sell their gear by looking at the amount of stuff they still have on the table at 5 p.m. on Saturday.

I've personally gone to hamfests and put out low prices on things if I really wanted them gone; items for which "I think I want to keep this, but if someone wants to give me 75% of the new price for it, I'll take it" rarely sell...which is the idea...

But yes, Dayton prices are pretty high. It was like that 8 years ago when I first went, and it's still like that, but it's a HUGE show, a huge event, and a chance to see a lot of friends in one place.

And yes, there are still bargains out there. With that many people buying, they're not likely to last long.

And never be afraid to haggle. Did you pay full-price for your car? Your house? Just because someone asks $200,000 for a house don't mean they expect to get it...

>Well sellers can dream on. I saw a Realistic HTX-404 in the box for

Howie baby, let me explain. The enforcement crackdown in ham radio seems to have diminished the capacity and willingness of us to discuss anything on the air that might be construed as thought provoking, controversial and stimulating. Now whether Riley contemplated such a thing is mere conjecture but nonethelsss it's occurred and it just plain stinks.

By nature, hams are intelligent or are supposed to be, hence just plain so-to- speak "HAM TALK" i.e. electronics mumbo jumbo should be Part OF THE WHOLE instead of the whole WHOLE. Can you think of anything more boring than being limited to palaver about rigs, antennas, linears etc?

Alright with that in mind let's analyze the current situation. If we are afraid to discuss on-the-air what the powers that be deem "undiscussable" for fear of alientating Monsieur LePhooey in Paris or Lord Bottomley Assscratch in London or Herr Helmut Bratwurst in Dusseldorf, what then are we hams with verve supposed to do-pack it in? And the irony of it all is that those who said the FCC wants to stuff us all onto HF so they can sell off our VHF and UHF to domestic and foreign interests may be right afterall. We must be all Mary Poppinses for fear of losing our frequencies to outside interests which have been set up to take or buy them anyway right from the get go. They should make a movie out of the whole scenario.

Therein lies the beauty of this forum specifically and the Internet generally. FREEDOM OF EXPRESSION DENIED ON THE HAM BANDS which explains what you read along politcal, among other, lines. In other words, hams should NOT be limited thanks to our basic inherent nature of extrovertism. Ideas are there for dissemination not artifical insemination. If anything this forum proves it is that we hams are MULTIDIMENSIONAL because the overwhelming majority of us ARE. This forum proves it.

5098. Attention gun lovers

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-27 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <8gopfr$h7p$1@slb7.atl.mindspring.net>
Source record: 110362

An explanation's in order.
On May 26,2000 a kid walked into a Lake Worth Florida school and shot his teacher to death.
SHOT...like SHOT with a GUN.
A kid! Where did it come from? Was it a REGISTERED and LICENSED firearm?
If not, are you sure you still want guns sold like bubble gum?
If it proves to be unregistered and unlicensed, will you still stand behind Heston and LaPierre who tell us how maaaaaavelous is our 2nd Amendment which allows kids to shoot teachers or will you see the light and give credit to those 750,000 mothers who let it all hang out in D.C. last week?
Remember the murdered teacher left a wife and two children. His wife was a MOTHER. You know what--when they march again, she's going to be right in front of the procession.
If you gun lovers' wives are included, just maybe they will make the necessary difference to stop the NRA from holding us all hostage?

From: Al Woodhull <aswNS@helios.hampshire.edu>
Message-ID: <392ff74c.0@news.hampshire.edu>
Source record: 110364

In rec.radio.amateur.misc <saciuk@freenet.edmonton.ab.ca> wrote:

: I was looking into buying an antenna in the next little while. As of
: right now, I am entitled to 6m and up, however, I will be starting a
: morse code regimen in the next few months. Does it make more sense to
: purchase an expensive 10 band antenna, and not use most of its
: capability, or would it make more sense to get a cheaper and smaller
: antenna that would handle 6m and 2m, and buy an HF antenna later.

Think of the material involved -- to be efficient an antenna has to be close to a half-wavelength in length, so you are talking about 38 inches for the two meter band (where you will probably want to begin) versus 30 feet for a multiband antenna that covers HF bands from 10 meters up. It's a lot more aluminum to pay for and to support in the air.

With very little work and money you can get a very efficient antenna for transmitting and receiving on the two meter band. You can easily homebrew a satisfactory temporary two meter antenna that you can hang from a ceiling or a tree by peeling back about 20 inches of the outer conductor of a length of coax, or by making a J-pole out of a 60 inch length of 300 ohm TV leadin. Look in the Handbook for coaxial and J-pole designs. Anything equivalent for the HF bands, even a single band 10 meter quarter wave (8 feet long) will require a lot more effort and expense.

Until you get a license that allows you to transmit on the HF bands there is little point in investing in an expensive antenna. Generally the main thing an expensive antenna buys you is efficiency. For receiving purposes efficiency is usually not a consideration on HF, since the problem is to hear the signal you want to hear against the background noise. But on HF all the noise is also being picked up by the antenna. So less efficiency means less noise as well as less signal. Signal strength on the HF bands is usually high, and a modern receiver will have enough gain to hear well with a simple random wire thrown out a window or up in a tree. The exception might be if you are in a noisy location like the interior of an office building and need to have a long shielded cable between your antenna and the receiver to avoid pickup of locally generated noise. The other thing a good transmitting antenna can bring you when receiving is directionality, if you are talking about a beam, as that will allow you to allow you to turn the antenna to reduce the strength of unwanted signals. But if you are considering a 10 band antenna I suspect it is a non-directonal vertical.

: More
: than likely, I will be using it with an IC 746 transciever. I will be
: taking my rig to Northern Manitoba (58?N), and the winds can be pretty
: cold and brutal up there, so I'm afraid of toppling tower syndrome :)

Now, when you make your move to northern Manitoba you will probably
not find many people to talk to within the limited range of 2 meters.
So I hope that by then you will have a license with HF privileges. And
when it comes time to transmit on HF efficiency of the antenna becomes
important, since now the signal from your rig is competing with noise
from other sources.

73, Al N1AW

Source record: 110365

Doc,
This is just more, "Oh ain't it awful!", emotionalism.
Of course it's a shame that the kids parents didn't teach
him about values and the sanctity of life. And it's too
bad that someone had to pay for the kid's parents lack in
raising their child correctly, by dying. And I would probably
agree with you that the dead teacher's widow will now have
to live with her loss because of some kid's parents didn't
teach the kid proper discipline, social values, and just
plain common sense.
Let me ask you this, what difference does it make if the
gun were registered, or not? You can NOT buy guns like they
were bubble-gum, now, any where in this country. If the gun
proves to be unregistered, which does not mean the same as
being unlicensed, yes, I will continue to stand behind Heston
and LaPierre when they defend ~our~, yours and mine, second
amendment Constitutional rights. (That IS the basis for all
law in this country, you know.) And no, the second amendment
does NOT allow kids to shoot teacher! Boy Doc, that was sure
from left field. Please quote the part of the second ammend-
ment that allows kids to shoot teachers, I can't seem to find
it.
Those 750,000 mothers who let it all hang out in D.C. last
week were used by the Clinton administration in a 'set up' for
an emotional 'media event' to support Mr. Clinton's attempt to
undermine the U.S. Constitution and destroy this country. If
you were 'taken in' by that so called 'righteous' demonstration
of concerned 'mothers', Doc you need to look behind the scenes
of that circus just a little bit closer.
And now we are being held hostage by the NRA! It would make
just as much sense to blame the NRA for 'male pattern baldness'
while your at it! It seems that the NRA is the 'one' who is
-defending- our constitutional rights, not trying to take any
thing from you. I swear to you ,Doc, I have NOT received a
ransom note from them! (I don't even pay dues!)
Please, really stop and look at what your advocating. YOU
are advocating taking away not only one of our constitutional
rights, you are advocating removal of one means of insuring that
our government respects the wishes of it's citizens. And that
is exactly why that amendment is there, Mr. Franklyn said so,
and he ought to know if anyone does, wouldn't you think? The
statesmen of the time made it very plain why the 2nd amendment
was included in the Constitution. And now, your trying to make
us think that 'you' know better than they did? Sorry Doc, I

just don't buy that.
Paul

Yes, you have a point and to true you probly have the t-shirt. Where i took my course before the exam it was made clear that they where not going to teach me about radio...first i had to pass the exam and then the radio club would teach me that. This is one of the main problems people get in to radio to communicate to other but firstly the have to learn the voltage of vbe of a forward biased transistor stuff they don't really care about and probly will never use. And to often it is a this point people turn away. Therefore adds more to the decline. There needs to be a real change in the exam sylbus not just cutting the pass mark.

What i want cq-radio to be is a site where people can have an on-line course to pass the exam with most off the junk stuff cut out.

If you have tort the exam before r u intersed in developing a cousre for us? it does not have to be in html or anything like that just a basic text file will do and i will do the rest.

Did my college Internship with the US Park Service in the mid-80's.
Part of what I did was crowd estimates in Washington DC. I would
roughly estimate Dayton's attendence at 16K.

> The Beanie Baby booth was a tad much, but his prices were good.
>
> Computers sellers outnumbered ham radio sellers 5 to 1.

Which is why I will NEVER go to another Hamvention again. (period)
For the price they charge for admission I DO NOT want to see a flea
market that is almost 45% computer junk, and worse yet, someone
selling Beanie Babies(!) I came to Dayton to see RADIO gear. I can
see computer stuff and Beanie Babies >FOR FREE< at any weekend
flea market in Florida. I almost wanted to go and demand my admission
money back, but instead I will just not go next year, or the next, and
the next one after that. I will miss the camraderie which is one of the
few good things. Oh well.

> No new/newer HF radios were evident and those being offered
> were priced ridiculously. $100 more and you got yourself a new radio

These are the "dealers" who go to every hamfest they can, buy up all the
reasonable priced equipment early, then place it on their table at grossly
inflated
prices later in the morning. These are the kinds of *puke-faced slimeballs*
that are killing hamfests. I hope they took all their overpriced radios
back home from no-sale, and half of them were damaged in transit enroute.
That's what these hamfest-bums deserve to have happen to them.

Greetings-

On November 22, 1963 there were fairly extensive radio communications between the airborn Air Force One, designated 26000 or ANGEL, a plane carrying various cabinet officers over the Pacific, designated 86972, the White House Communications Center, and Collins Radio Company Headquarters in Cedar Rapids, Iowa, designated LIBERTY station.

I have heard rumors that amateur radio enthusiasts (perhaps in Colorado?) at times monitored, and possibly even taped, these important historical transmissions.

Does anybody have information regarding this that they can share with me? Does anybody know where else I could look? I am greatly appreciative, in advance, for any help. I will monitor this thread or can be reached at rickholtman@aol.com. Once again, thanks.

Your estimates are probably right on target. However, this is a 3-day event. If attendance was 24,000 or 28,000, as some have claimed, It's safe to say that they weren't all there at once.

Would your response have been different if he was stabbed or beaten to death? Murder is murder, regardless of the method used.

The last time I checked, it was already against the law for a minor to possess a handgun. Yet this didn't stop the the kid from shooting the teacher. How would more unenforcable laws do any better?

Guns have been a part of our society since this country's inception. It is only in recent decades that people have decided to shoot each other to resolve their differences. What is your explanation for this?

Just plain bullcrap apologetics for a country gone nuts over violence and guns and you smooth things over as if our troubles were a rumpled sheet. Holy smokes, get with the program. What will it take for you and so many others to see the light-gunshot wounds to your own bodies? Can't you see that there's a sickness in this land and the bacteria are coming out of chambers and barrels?
I'm so disgusted with the inability of us to use the 2nd Amendment properly, chuck it out and ban the damn things altogether. Turn in the guns. Let the Feds melt them down and form plowshares out of them. Where's the Christian ethic in this so-called Christian country? Put on the shortwave and we get bombarded by all these freaking Jesus freaks who preach peace, love and brotherhood while at the same time fostering the legal and illegal purchases of guns. Why just yesterday on the Genesis Network I heard the hypocritical bastards pushing a gun that can be easily assembled to circumvent the law and common sense.
It's getting so bad that we who hate guns will now have to go out and buy them to protect us from you geeks who worship them. The damned commies and Nazis must be getting a kick out of how we are doing ourselves in since they couldn't do it and you "gunnies" are helping the process.

> An explanation's in order.
Yes it is. No doubt. But you accuse with your emotions, not any logic. I am not a "gun nut". But I truly cringe when I see a feeble mind trying to overthrow the great minds that set up this country. The Second Amendment is there for some VERY SERIOUS AND PERTINENT REASONS. Just because you are a knee-jerk reactionary to the media's sensationalism doesn't make your logic or cause justified.

Tell me, oh self-deified one, how many deaths took place in Florida on that same day, and how many of them were unnecessary? Why aren't you ruling out the cell-phone related traffic deaths, alcohol-related traffic deaths, inattentive driver-related traffic deaths, other "routine" murders, etc?

I'll tell you why. Because you see a "kid" use a "gun" to kill a "teacher". Those are all "trigger" (no pun intended) words that the media knows you will reach critical mass with. WAKE UP CRETIN...you are not seeing nor are you presenting the WHOLE PICTURE.

You don't like gun deaths? Good. Most of us don't. But you need to try and apply the PROPER "medicine" on the ACTUAL wound. Kind of like your osteopath story. In layman's terms, we call it: "Barking up the wrong tree." Hello? McFly?

> On May 26,2000 a kid walked into a Lake Worth Florida school and shot
>his teacher to death. SHOT...like SHOT with a GUN.

If this was an UNREGISTERED baseball bat, would you vote to outlaw sports? Trees? Lathes? Pine Tar? Sue the sporting goods store who sold it? How about the cashier?

> A kid! Where did it come from?
Again, off target. My question when I read your post was:
"What the %$#@! was wrong with the kid?" I went to school, and I always knew right from wrong, and shooting my teachers fell somewhere toward the "wrong" area. But I went to public schools, so maybe I am unenlightened to your higher level of intellectual thinking.

>Was it a REGISTERED and LICENSED firearm?
Trust me on this one. Bullets don't care about laws or paperwork. Moreover, if this kid was so mentally screwed up to KILL, I serously doubt he's overly concerned with PAPERWORK! Why do you care if it was REGISTERED? The fatal wound is somehow LESS fatal? Or is it that you feel that REGISTRATION will somehow make a kid like this decide to go to

church instead of murder his instructor? Please explain this to the ng, I believe many, if not all, are waiting for you to embue us with your blinding, omniscient intellect.

> If not, are you sure you still want guns sold like bubble gum?
They aren't. Quit LYING to gain your way. Typical Liberal B.S.

> If it proves to be unregistered and unlicensed, will you still stand behind
> Heston and LaPierre who tell us how maaaaaavelous is our 2nd Amendment which
> allows kids to shoot teachers or will you see the light and give credit to
> those 750,000 mothers who let it all hang out in D.C. last week?

Again, Bullets don't care about laws or paperwork. Wholesale responsibilty lies with the kid, and, if underage, the parents who allowed their minor access to a deadly weapon.

Do you have minors? If you did/do, do they have access to your car keys? Cars kill, and they are REGISTERED. Many minors can kill with a car whether deliberately or inadvertently. How does legal paperwork alleviate this problem?

> If you gun lovers' wives are included, just maybe they will make the
> necessary difference to stop the NRA from holding us all hostage?
You are in need of assistance if you make a statement such as this, and your thought patterns are similar to Medieval ones. Blame the gun, not the person. The Devil is in the gun, not the person.

Stop spending so much time on the media, and start reading HISTORY. Go speak with some crime VICTIMS, and start spouting off your Liberal B.S. to them. I bet you get your pompous ass (deservingly) torn to shreds!

In what way did he "smooth things over"? The PROBLEM is WITHIN, and it is obvious that this kid hadn't the substance WITHIN to stay on an even keel.

> Holy smokes, get with the program.
What YOUR program? WE ALREADY HAVE THAT. It's called COMMUNISM. Go live there, and see if it changes your mind any. Until you LIVE there, you are just a gasbag spewing methane.

>What will it take for you and so many others to see the light-gunshot

I went to the Dayton Hamvention in 1974 & '75 or it could have been in '75
and '76.
The first time was enjoyable. The second time was so bad that by noon on
Saturday I had had enough and jumped in the car heading for Cincinnati.
Upon reaching the "Queen City" I went for lunch and then out to the very
famous zoo.
I stood in the monkey house watching the apes, gorillas and orangutans
jumping up and down, picking lice off themselves and eating them, munching
on bananas and finally trying to throw their feces through the bars at the
patrons.
I felt as if I were right back in the Hara Arena.

If you drop the satellite use, get the T81A. I don't use the upper and lower end much, but it is nice to have it if you want to try it out. And I heard the thing just underwent a price drop. The quad bander works great and the only thing I dislike about it is the lack of warning when the battery runs down. It just quits.

5123. FS: Old Radio/Electron Tube Books (5): 1929 - 1957

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-27 00:00:00 UTC
From: oldbooks78@aol.com
Message-ID: <20000526212526.14508.00000299@ng-fa1.aol.com>
Source record: 110420

I currently have for sale the following old radio/electron tube books. Prices include book rate postage (within the US). The books are:

"Elements of Radio Communication" by John Morecroft, published in 1929 by John Wiley and Sons. The 269 page hardbound book is in good condition. There are pencil marks and notes on many pages, as well as notes inside the front and rear covers, but everything is readable and secure. Nicely illustrated throughout, with several photos of old vintage equipment. There is also a small pad of unknown purpose stapled to the first blank end paper. Available for $14.

"Practical Radio Communication; Principles - Systems - Equipment - Operation Including Short-wave and Ultra-short-wave Radio" by Arthur Nilson and J.L. Hornug, published in 1935 by McGraw-Hill. The 758 page book has blue cloth over flexible board covers. In good+ condition. There are some passages underlined in pen in the first 10 pages of the book, otherwise very clean. Nicely illustrated throughout. Available for $15.

"Communication Engineering" by William Littell Everitt, published in 1937 by McGraw-Hill. The 727 page hardbound book is in about fine condition. There is a previous owners name inside the front cover, and a few minor pencil notes on the first blank end page, otherwise very clean. Dark green cloth covers with gold lettering on the spine in particularly nice condition. Available for $13.

"Electronic and Radio Enginering" by Frederick E. Terman, published in 1955. The thick, 1078 page hardbound book is in about very good condition. The pages are generally clean, with no page tears, but with underlines on a few pages, and a previous owners name inside the front cover that is marked out with black marker. Black cloth covers in nice condition, with a strong binding. Lots of good info in this text. Available for $13.

"CBS Electron Tubes and Semiconductors Technician's handbook" first edition, first printing, published in 1957 by CBS-HYTRON. Unnumbered pages, about an inch thick, card covers with a spiral binding. The book covers receiving tubes, picture tubes, crystal diode reference guide, germanium and silicon diodes, silicon power rectifiers, transistors, special purpose tubes, tube type numbering system, use of tube testers, and much more. In very good condition. Available for $15.

If interested in any of the above, please email to "Oldbooks78@aol.com" to reserve. Thanks, and best regards.

Dave

> Bill K2UNK

When national leaders of special interest groups in amateur radio like NCI are reminded to compare the amateur radio service to strictly self-serving hobbies like slotcar racing or model railroading, then the demise of amateur radio is not far off. When amateur radio loses its broad social value as an auxillary, not-for-profit, robust, message handling system, a training ground for radio communication skills education, a promoter of international good will, then it steps squarely in harms way by the congressional budget cutters and frequency auctioneers.

After all do you want your government spending any money on promoting or protecting self-serving hobbies? There are (or at least were) some socially redeeming hobbies that the ARS should better be compared to: Bee Keeping, Earthworm Growing, Astronomy, Horticulture, Midnight Basketball, etc.

73,
Clay N4AOX

Hi there,

To true yes amateur radio has declined. Instead of moaning why not do something worth while to stop the decline.

Over the past few year the ham world has been declining mostly because of this...the internet. The great propaganda tool it holds loads of information about hobbies that are not in the lime light all of the time...amateur radio to name one.

I have registered the domain cq-radio and what I hope to do is to create it in to a major library of information for new amateurs and old ; somewhere where people can easily find information. There is the basic layout of the site already up there and it shows what I hope to offer on-line courses, etc. Please go and visit is and tell me what you think.(sorry for the js error on line 110)

To make cq-radio in to a good site; I can not do this alone and what I want is YOUR help. You don't need tobe a brilliant html programmer with qualifications in java script. If you have some thing to offer then I wanna hear from you...so please e-mail me on the below e-mail address.

rdheath@cq-radio.co.uk

Thanx help me to help the hobby

Hello Andrew,

See, you ask 15 hams the same question and you get 15 different, but all good, answers! I won't tell you what kind of antenna to buy or build, but I agree with the concept of getting some sort of HF antenna. Even before I got my first license, I bought a multi-band vertical (Cushcraft R7 - mostly due to $$$ and space limitations). My grandmother always told me, "You have two ears and one mouth. Use them in that proportion!". So I took her advice and did a lot of listening during the months when I was studying theory and code. You will quickly be able to determine which operators have an easy to listen to style and which ones do not. When I did get my license, I tried to emulate the style and mannerisms of those operators that I enjoyed listening to so I wouldn't sound like a total "greenhorn" on the air.

Good luck with whichever antenna you decide to buy/build.

Well of course the League is a publishing house. On January 29, 1915, the Connecticut Secretary of State recorded the incorporation of the League under the following three articles:

"Article 1. The name of said corporation shall be The American Radio Relay League Incorporated.
"Article 2. The purposes for which said corporation is formed are the following to wit: The promotion of amateur radio, the organization of amateur radio stations, the promotion and regulation of amateur radio inter-communication, and the relaying of messages from station to station, and the printing and publishing of documents, books and pamphlets necessary to any of the above purposes.
"Article 3. The said corporation is located in the town of Hartford and the State of Connecticut."

Lucky for us that second article includes printing and publishing:
We participate in a self-taught technical hobby/service; not a day should go by without us gaining new knowledge WRT to electronics. The only publications I have always been able to turn to when questions arose which needed immediate answers were the League's pubs.

For some 85 years the ARRL has produced a handbook written so that even a novice can learn and understand from it. The government thought so highly of the Handbook that it was used to train military communicators during WWII. For the longest period, the Handbook was the greatest selling technical book ever published, in and out of ham radio, according to Time Magazine.

During the 50s when SSB was finding its way into ham radio, there was no pub one could turn to to learn about this new mode except the League's SSB Manual. Also during that decade the FCC relaxed the regs regarding mobile operation - no one else published a mobile manual except the League (1955).

To whom could you turn to for the great ideas and techniques that appear in the Hints and Kinks booklets? Propagation and antennas: The Antenna Manual. Who else in the 60s produced a VHF Manual? And when that VHF crowd began exploring FM: The FM and Repeater Manual. The very first book in the 80s devoted to amateur digital comms was the League's Get Connected.

Publishing affordable technical books was one of the original goals in the League's charter; for 85 years they've made information available to the layman that was nearly impossible to find elsewhere. How in the world could you possibly find fault with this business side of the League?

Every ham shack I've ever visited in the last 30 years has had many League pubs on its bookshelves. We are (or at least were) a group with a voracious appetite for reading and learning. Luckily, the League has been able to feed us what we most desired.

Ham radio and reading are inseparable; and it takes a business to do what the League has accomplished.

Wonder why you folks always ignore the preamble to the Second,
"A well regulated Militia..."

It's interesting to note that the US Constitution, Article 1, Section 8, states that the Second Amendment Militia is to be used to execute laws, suppress insurrections, and repel invasions. And you're not left to your own initiative: Not only are you Second Amendment Militia gun-owners under control of the Congress, but also the President (Article 2, Section 2.) You talk about using your guns against the government ("insurrection"), but it's the government who, according to the Constitution, is in charge of your militia. You'd have to violate the Constitution in order to rise up against the government. Heehee -- according to the Constitution, you'd have to suppress the insurrection that you've created! What a paradox.

Jeff

Because the Supreme Court has said that the right is for the
people. That the Militia IS the People. Not that it's being
ignored. Quite the contrary. It's that it's been specified, and the
right is for the People, individuals, to keep and bear arms.

No jumping here. Paul said, "...you are advocating removal of one
means of insuring that our government respects the wishes of it's
citizens." That sounds like Paul is prepared to use a weapon against
our government if they don't respect his wishes.

Which pulls into play a whole slew of goodies, such as the age limit for the Second's Militia runs from 17 through 44 (US Code). If, as you say, the Militia is the People, then, according to the US Code, someone outside that age range must not be a member of the People. Pretty silly, Peter.

This is getting boring. Go find me a NOS 6146 for my DX-60.

5149. Re: Attention gun lovers: Jeff's Paradox

"A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed. "

This is so simple and very plain to understand for anyone who understands basic English. The key here is the comma following Militia. In this simple sentence, each thought is separated by a comma, but relate to each other to form a complete thought.

Simply translated, it means that a regulated militia (a formation of the common people for mutual defense) is necessary to guarantee personal freedoms, and that in order for a militia to be formed, the people of the land need to be armed. Therefore, their acknowledged natural right to keep and bear arms is paramount and above any authority created by the formation of the US government.

It should be noted that this right is not granted by the Constitution, it is simply acknowledged and re-confirmed as a natural right which existed prior to, and in spite of, the government which was being formed at the writing of the document.

However, you're forgetting something. Billy-boy has to go to an outside "source" since Hillary was too busy with her girlfriend(s). Remember "Travelgate?" There's more to the relationship than just being a government official or married to one. Their marriage is one more of convenience than anything else.

So, how is this radio related?

> of the People. Pretty silly, Peter.
>

You're logic is flawed. The Second Amendment is the right of the people, individuals, to keep and bear arms. There is no Second Amendment Militia. The Amendment refers to the right of the people to keep and bear arms for the creation of an well regulated, that is to say, well equipped and proficent body of defenders. But it doesn't specify terms or qualifications.

The body to which you refer is a specific body created for the purpose of defense. But participation in that body does not affect the right of the people to keep and bear arms. The Second Amendment does not create such a body. Nowhere in its text does it do so. It only reaffirms that the right of the people to keep and bear arms is not infringed. Specifications of the body in question do not limit therefore the right of the people to keep and bear arms.

Yes it is boring, Jeff. You keep specifying the qualifications of the Second Amendment Militia, and there is no such thing.

With the interest that law enforcement is showing towards the internet
today, I would not be so quick to say that. Many communities are trying
to figure out how to fit the existing laws to the internet. Therefore,
I doubt they would dismiss a complaint that quickly.

If I'm walking down the street, and you're driving by, you're performing an act that doesn't just include you. Everyone inhales the "waste gasses" of the automobile, but I don't see you raising hell about automobiles.

But that's okay - you drive cars and don't smoke. So one form of "waste gasses" is acceptable to you and another is not. So, in your opinion, you have a right to pollute and the cigarette smoker does not. Selective civil rights.

Hi and thanks for reading this.
I have written a Spectrum Analyser program (free) for the Yaesu FT920, Icom PCR1000, and Kenwood. It will run on any PC with Win95 or above. Of the Kenwoods' it's only known to work with TS 570, TS850 and TS870 so far.
Download via new homepage at http://www.mm5agm.pwp.blueyonder.co.uk
If you have a Kenwood and try the program, could you let me know the model number of the Kenwood and the result?

Not even close to 30k. I've been to Dayton (this is my 11th)when you
couldn't even walk inside (on a nice day). The parking lots outside the
arena weren't even close to having the number of cars from last year
alone. Inside vendors like R&L and HRO said the same thing. My hotel,
normally filled had 50 rooms available for walk in check-in.

There were more people when the event was held in April. The change to
May did wonders for the weather (at least it doesn't SNOW anymore), but
there are so many time conflicts for everyone in May.

If 30k people were there, then how does one explain why so many outside
vendors left Saturday? I'd say there were probably more than the
unofficial estimate but way under 30k. The best people to talk to was
the food vendors. According to 3 of them, they had WAYYYY too much food
for the number of people, even factoring in the fact that the pricing was
outrageous.

It may not have stunk on ice, but it certainly was not in the top 5.

Hello again,

To everyone who responded - thank you. I think what I may do is pick up a Cushcraft Multidirectional Yagi. There is one that is a 6m/2m/70 cm tribander. It sounds like it isn't cheap ($285.00 CDN) from a compant called "NTF", in Calgary, Alberta. For the HF bands, I will try to build some verical dipoles, and do lots of listening, as I work on my HF qual. Apparantly, that particular Yagi is light enough to be able to use a simple Radio Shack rotator. If any Canucks out there know of any cheaper Canadian dealers, I'd sure appreciate to hera from them. With the GST, duty, and exchange, it becomes too costly to import from the U.S. Once again, thanks to all!

I need some info on using a Realistic pro-2025 16 channel scanner to activate a relay when the squelch is opened..... I want to use the scanner as a receiver on a remote base to key my 6 meter ham radio when the scanner receives a signal on the 440 mhz ham radio band.....Can anyone give me some information on this? I have been unable to find a schematic on the 2025 and I have been told that when the squelch opens there will be voltage come up on a pin inside the scanner..... Any ideas of how I might find that pin when I do not have a schematic? I am also open for any other advice on this subject.....
Thank you,
Dan (N4YSV)

My favorite characterization of Hillary was a political cartoon in the newspaper.....

BillyBob had his arms out, eyes closed and lips puckered for a big kiss in Hillary's direction. Hillary had her arms out, lips puckered and walked right on by him to hold and kiss the Presidential Seal.

I think that cartoon was, probably, the closest characterization of the First Ladybug ever printed, don't you?

Sounds good on paper; however, the part that is not in your (or my)
control, is the fact that the criminal who DOES carry may (and does)
put you in a position where you ARE endangered. That's the whole POINT.

Nice areas of town where I live (on the mainland), are fertile grounds
where a concealed handgun and a criminal will terminate you where you
stand. NO exceptions. AND in PUBLIC.

"Gimee your wallet. BAM!!!"

End of story.

I don't have time to DISCUSS with someone who is walking in a parking
lot, down the sidewalk, or just hops off a bus. It happens, and FAST.

If he doesn't know if I'm carrying or not, THAT is a HUGE deterrent,
moreover, other people within eyesight that witness the crime may be
able to take him out, even though it cost me my life. It's not much, but
it beats the hell out of being unarmed.

Your sentence above makes it sound like it's YOUR (or MY) fault if we
get attacked.

to bear arms. Apples and oranges.

I agree with your point about cars; however, I live in a society
where a car trip is a necessity to get to work (no public
transportation), whereas smoking is NOT essential.

Not quite the same.

If I walk into a crowded restaurant with a jambox and am blasting some
kind of obnoxious music that is irritating to the majority of the
patrons, I will be asked to leave. But it's OK to pollute those same
patrons air (a biological function necessary to support life).

One has more "weight" in an essential manner, but has less "weight"
socially.

What you are talking about is what society will/will not TOLERATE.

Not actual RIGHTS.

Back in days gone by I built a few repeaters. I would simply find a
hi/lo voltage by activating the squelch . When this point was found I
did some fudge factor hooking up. Basically if the the voltage goes
high when squelch is opened you will need a flip flop gate to control a
relay. This will flip the high to a low. Hook a relay there and go
for it.

Check a handbook from the 70 or even 80s under "COR CIRCUITS" Carrier
operated relay under repeaters.

I should also add that Clint Eastwood, when he was Mayor of a small town, made pistachio ice cream ILLEGAL. Pistachio ice cream is not a RIGHT.

I know this is silly, but if you were caught eating it in town, there was a fine for doing so. I don't know about any fines for mere possession. Clint just palin didn't like it...kind of like Bush, broccoli, and the White House.

I'll try and find some info on this.

You can do that in any state, even L.A. CA, but it's not a "flea market", unless you call the parking lots around East LA and Watts "flea markets". The same guys selling the guns are also selling the crack, etc.

You imply that you know of legitimate "flea markets" where you can buy "all the guns you want". If this is true, please cite the specifics such as date, time, organizers of record, and maybe a publication where the event is advertised. (But don't be surprised if the "sellers" are undercover ATF agents doing a "reverse sting")

The fact that criminals are dealing in firearms on the street corner is nothing new, but illegal trafficking in guns is a result of the liberal groups such as the ACLU, NAACP, etc. who constantly restrain the courts, and police departments from enforcing existing laws against certain groups of persons, and it is these groups of persons who are doing the vast majority of illegal trafficking - be it guns, drugs, stolen cars, jewelry etc.

Look at any of the TV shows like Cops, the documentaries on the Discover Channel, or read the newspapers. Start counting the number of gun related incidents and classify the incidents by race and age. If you do, you'll find that it's obvious that there's not a gun problem, but a "people problem" in certain segments of society.

But the liberals in government will never go after the root cause of the problem because they are too busy courting these "groups" for votes at election time. To take any real action at controlling the "gun crime problem" would mean that they would have to target specific elements of society, and that would guarantee being branded a racist or bigot by all the liberal defense groups.

Hi, I haven't run HF mobile for a few months, and in the time I've been off the air I had the 60,000 mile maintenance check on my car. Before the car went in, I had 1-3 s units of noise coming from the car. Now the noise is 20 over, and the noise blanker on my IC-706 isn't doing the job. I looked at the the receipt from the dealer, and they did change the spark plugs. Looks like everything else they did was changing gaskets, fluids, and belts. I suspect its the spark plugs. Any other suggestions as to what may be the causing the increased noise? It seems to get much worse when you acclerate and then switch quickly to the brake (like when trying to find a parking spot at the mall). If it is the spark plugs, how do I solve the problem? Rig is an IC-706, High Sierra HS-1500, RG-8x.
Thanks,
Mike

5176. For Sale HW-16

Newsgroup: rec.radio.amateur.misc

Hey Windbag, what are you so grumpy about? Seems to me you need either a
good meal or a good laxative. For heaven's sake, my point is that the guy
was stabbed for providing a memorization course which would have increased
the numbers in ham radio exactly as Bash does. You don't have to get all
bent out of shape over the truth. If you feel irritated, go let it out on
the guy who was canned, not on me who supports him. In the meantime go eat a
can of Heinz beans, sit in the tub and bite the bubbles. It'll be the first
worthwhile thing you've done in May.

What kind of strange statement is this? Do you mean to imply that
people can protect themselves from crime simply by choosing to avoid it?
While some common-sense precautions are prudent and should be taken,
it's ridiculous to suggest that one can immunize themselves from
becoming a crime victim entirely through changes in their own behavior
and habits. For example: Should all convenience stores just close up
shop to prevent the possibility of a hold-up?

Source record: 110229

FLASH: The Red Panty Man got naked and unwound on 3950 during the Liberty Net last night! Apparently realizing the FCC's dismal record of nabbing unidentified jammers, the "downtown boy-hunting" Red Panty Man let loose with his song of perverted love, attempting to jam the Liberty Net.

Now, I am NOT defending the Red Panty Man ... I think all jammers, especially unidentified ones, are cowardly scum. And, for the most part, I do like the Liberty Net and sympathize with them for having to endure jamming every single time they get on the air. However, if the Red Panty Man (or anyone else) is going to jam the Liberty Net, they could at least do us all a favor and limit their jamming to K4GAR's boring, predictable, worthless, incredibly long monologues!

Sheesh!

Professor: This is not necessarily aimed at you.

The problem I see in other countries, states, etc. is that YES this is some of the mindset that will be FORCED down your throat. In Australia, the Prime Minister said something along the lines of "self-defense is no reason to own a gun". (not an exact quote; I will try and find it). Subsequently after REGISTRATION came CONFISCATION.

Now, I hear as much as an 80% increase in gun violence.

The fact that a kid shoots his teacher is unthinkable. But just because under 50 people are victims of these inexplicable tragedies doesn't mean that MILLIONS are to be left with no option for (deadly) defense.

Restrictions on law abiding countrymen is akin to AF2Y's buddy seeing an osteopath for his life-threatening HEART condition. Yes it is a valiant effort, but it is in VAIN, without any payoff.

Once, in college, I had my rifle and shotgun stolen from my vehicle. One day, a local detective called me on the phone and asked me to appear and identify if these were my weapons. They were, but I couldn't leave with the shotgun because they had to destroy it since it had been sawed off (no, not by me). They recovered my weapons in a drug raid, and my rifle was wrapped in camouflage cloth, and was loaded with hollow point bullets (no, not by me). I got to keep the rifle and hollow point rounds.

Point is, is that we have laws to try and keep things on a respectable level. But the LAWS DON'T WORK. What was confiscated along with my rifle and shotgun were ROCKET LAUNCHERS. Standing up against the wall were rocket launchers. Live ones. Aren't these illegal? Aren't they hard to obtain? Hard to transport? Expensive? Tracked by the maufacturer and buyer (military)? Essentially REGISTERED?

Yet, there they were. No LAW is going to prevent the black market from it doing what it does best.

PS: I tried to leave with a few launchers, but the friendly detective wouldn't have any of that. I thought they might come in handy during rush hour.... =)

They probably did not put resistor plugs back during your "update". Non
resistor plugs are very noisy.

Check to see if the plugs that were replaced are resistor plugs (what you likely had in the engine before the check). If not--take it back to them because likely resistor plugs are specified for your engine. The dealers charge an arm and a leg or two for spark plugs. You should have changed them out yourself with some good resistor plugs. If the dealer put in resistor plugs, you may now be in need of new spark plug wires, because the may now be leaking. It may not be a plug related problem at all. See if noise is there with the antenna disconnected. If it is, it is line noise and you can filter it out. If noise is gone when antenna disconnected, you need to "sniff" to locate the source and eliminate it there.

I was surprised to hear of the 30,000 figure. In the past I always heard the numbers were in the high 30's and low 40's. I guess it depends upon whose PR you listen to.

As for the April/May change. I always liked going in April. It was sort of a right of spring, signalling the end of winter and the beginning of what every ham's fancy turns to, the outdoors and radio. I believe May is a more complex time to go, especially when the little ol' lady is making her plans.

I hope someday the people at Hara's Arena invest some capital and increase the physical plant. Its getting to difficult to be a greying old geezer and muddling through throngs 12 feet deep or more. Hey Dayton, take a hint!! I don't think its a tradition to be packed in like sardines and wax rhapsodically about it. The flea market is the best though. I liked it when Kenwood was outside under a tent. The ham population is getting older. I guess the internet will ultimately become a virtual hamfest and the Daytons will wane.

And so it goes....

They most likly took out the resister type spark plugs
and replaced them with "high performance" no resister
spark plugs. Many cars have resistor spark plugs
as OEM. Check your manual or look it up in the
book at K-Mart or many local stores. If that is what
they did, take the car back and insist that they install
the correct plugs.

If all else fails, you can install the resister type
spark plug wires.

All Palm OS users

Need to study for the new tests? I finally had the chance to convert the -new- US ham radio test question pools so that I could read them on my Palm IIIxe handheld computer. They're the same stuff found on the ARRL's question pool web page, just converted to the Palm DOC format. You'll need a doc reader such as CSpotRun.

For the other Palm OS users out there, if you want to study the question pool but can't haul a lot of paper around (the General test question pool is 70 pages long, Extra is 120 pages), this is what you need.

He's not saying anything different from what was said in 1789.

If the people wish not to be murdered and imprisoned for speaking out against government policy, they've every right to use weapons against the government, because the government certainly isn't respecting their wishes.

Ahem. The Amateur Radio Toy Store has all ICOM product on
display, too. I'd hardly call ICOM a monopoly for it.

What a store chooses to carry is determined by many things.
Contractual obligations, preferences of the management, profit
margin, sales figures all influences what's on the shelves. Many
items are excluded despite a demand for them.

You know, ou can only find Mr Pibb in the Burger Kings in the
suburban areas of Chicago, and NOT Dr Pepper. Not because Mr Pibb is
so much better. It's not. Not because it outsells Dr Pepper, it
doesn't. But because it's a Coca Cola product, taking Mr Pibb allows
better rates on Coca Cola purchases.

(Although I will say that the strategy doesn't work so well for
the Coke only stores. Many have switched to real Dr Pepper because
of competive pressures from Arby's usually in the same block.)

80% ARRL books on the shelves of a store, or a group, doesn't
indicate the breadth of ham books out there. The choices are wide
and deep, as my own collection reflects.

LY HAMFEST ©2000

Radio amateurs in Lithuania have a tradition every summer to meet somewhere in a beautiful place. Lithuanian Amateur Radio Society (LRMD) and Panevezys district radio club organize LY HAMFEST '2000 and kindly invite radio amateurs from all countries.

It will provide excellent occasion to meet over 300 LY hams in the same place.

TIME
Official opening ceremony will start at Saturday noon (at 12:00) on July 29. As usual, we will start to gather earlier, therefore you can arrive beginning with Wednesday, July 26. Official closing ceremony will take place on Sunday, July 30 at 13:00. However, Hamfest will not end at this time. You can stay until Wednesday, August 2.

PLACE
Hamfest site is situated near old BALSIAI watermill, 2 km from PASVALYS town in Northern Lithuania.

FACILITIES
Balsiai watermill is one of the oldest in Lithuania, built in 1764, protected monument of architecture. Recently there is fine arranged place for festivals and fairs. Sleeping rooms (10 USD/night), restaurant, bar and sauna is located in the watermill. Two bathing places (one for children), basketball court, dancing ground and space for tents are alongside. You can buy food and drinks in the hamfest place or catch fish and lobsters in the river.

ACTIVITIES
VHF, ARDF, RUFZ, basketball, beer drinking, rope pulling and other contests.
Lotteries, auctions, campfire, dancing, biplane flights (LY2000RMD/AM), etc.

FURTHER INFORMATION
For program, maps and photos please visit:

You may want to trip that relay thru a timer in case the whole thing fails
or locks up. Essentially you are building a repeater. There may also be a
test-point for limiter current that can be used with an op-amp or somesuch
to accomplish the purpose. These things are pretty generic once you get by
the i.f. so I would get a schematic of a similar unit and blunder-futz a bit
with my trusty meter.

> P.S. Standard Disclaimer: I work for them, but I don't speak for them.

The older VTVM's used a divider network that totaled 10 Meg ohms, and so do the DVM's that I've worked on. The range was selected by picking a tap, not switching out resistors, so the load to the ground lead was a constant 10 Meg ohms. Also, if you have a meter with a 20 Meg ohm input impedance, parallel another 20 Meg ohms and you won't need to scale your readings. Above all, make sure the ground lead is in good condition, and never use a weak alligator clip. If the ground comes off, you can really get hurt, or killed.

It might be necessary to modify that to read "buy an old Diesel". I'd be awfully surprised if modern ones didn't have electric fuel pumps, injectors, and other peripheral devices. Even yours has headlights and gauges and starts with a battery, so there's a charging system and regulator. A Diesel doesn't have an ignition system, and that's often the dominant noise source, but it has every other noise-generating device you'll find on any other car.

We rent diesels where available for noise and interference locating, and some of them are electrically very noisy. Try before you buy. Some turn signals and heater/AC blowers are insufferable! IMHO, the '70 and '80 vintage Mercs had both. Toyota makes a diesel available only in Japan which is very quiet.

For a well-regulated militia. It's interesting to note that the US
Constitution, Article 1, Section 8, states that the Second Amendment
Militia is to be used to execute laws, suppress insurrections, and repel
invasions. And you're not left to your own initiative: Not only are you
Second Amendment Militia gun-owners under control of the Congress, but
also the President (Article 2, Section 2). You talk about using your guns
against the government ("insurrection"), but it's the government who,
according to the Constitution, is in charge of your militia. You'd have
to violate the Constitution in order to rise up against the government.
Heehee -- according to the Constitution, you'd have to suppress the
insurrection that you've created! What a paradox.

Jeff, don't be so absurd. You can't argue principle and exclude content. You can't argue > What might have been seemed correct then is completely out of place today < and apply it selectively. Of course you can't equate Constitutional rights with CW. But if you're arguing obsolete thinking and modern era needs, you can't pick and choose.

If you want to dismiss the Constitution, you"ll need to select a different tack.

I"m pro CW, btw. As you know.

> A prospective ham still can't get on HF w/o having to pass a Morse

THen you need to respect the other pre existing conventions, convenants and legalities in this conversation, and support Constitutional Rights with the same fervor you support CW. The grounds are the same.

Which is the whole point to law-abiding citizens' wishes to keep them handy. If they are outlawed, we have fists and knives, and the criminal has the guns. Duh. And, yes, registration leads to confiscation.

Go talk to the folks in Australia whose gun-violence rate is going up in astronomical proportions after their gun ban.

Better yet, go strolling in a violent section of town, and announce your vulnerabilty. Remember, you have a fist to protect you. Go now. Buh-bye!

The Federalist Papers and three separate Supreme Court decisions,
as well as numerous Federal Court decisions disagree with you. The
Second Amendment protects the right of the individual to keep and
bear arms.

It's not discrimination. They are performing an act that doesn't just include them. If you and I are in a room and you light up and smoke, then WE are BOTH smoking; I have NO choice in the matter, but to inhale your waste gasses. NO thanks.

Cigarettes are ADDICTIVE, and the smoker will say/believe/ignore whatever just in order to get to the next puff. I WAS a smoker once, but after many attempts at quitting, the realization that it wasn't worth an ugly, drawn-out, and expensive death finally made me stop. ADDICTED smokers are GOING TO WHINE and claim UNFAIR. Then, when they're DYING, they want to know what can be DONE to SAVE them. Can't have it both ways.

My RIGHT to bear arms WITHOUT big brother up my craw about it is NOT affecting a roomful of gun abolitionists, nor is it a proven CARCINOGEN that I am wrongfully imposing on them.

If I am irresposible and the neighbor kid or my child/minor gets a hold of it and blows away his teacher, we have TWO problems. MY irresposibility, and a youthful CRIMINAL. (not to mention the other affected lives).

You have an entire generation or more that have had little to no parenting, and have little to no idea what life really is. An inanimate revolver is not to blame. People have been killing since time began, and now its the gun's fault? That kid was defective or sick or too stupid to be in society. So now my rights get dissolved?

No, I don't "get it."

>Hopefully in a few years the only place they'll be allowed to smoke is
>at HOME? Now if you speak to a puffer, he or she will ask, "Why's
>everybody always picking on me? I got rights.
They are blinded by the addiction. I was there. No way I would have smoked it it didn't feel good. Problem is, is that it is awfully harmful. NO WAY would I have trashed my body if I wasn't getting pleasure from the drug. It is illogical, but you're not totally in control. NOBODY has the RIGHT to pollute my or your air. Smoking where

others are affected is not a RIGHT.

> A PUBLIC MENACE. Public menaces KILL. Get it?
MY gun (if I have one) is NOT a public menace. The person using it in a CRIME is the PUBLIC MENACE.

GET IT?

This type of individual will find all kinds of ways to be a MENACE. Do we then ILLEGALIZE everything, and live in plastic bubbles so we don't bruise?

>But rights are being violated, correct? Naturally some puffers will
>stand up and proclaim, "The founding fathers had us in mind too."
You and I don't have the RIGHT to pollute another's air. Those aren't RIGHTS they are what the public will/will not tolerate. It is popular OPINION, not a RIGHT.

It's a damn good thing you're not in office. You really just don't "get it".

>Lax gun laws in this nation are a PUBLIC MENACE. Murders just waiting
>to happen.
Hmmm...so we need more laws to restrain us. Well, I hear laws like in Siberia are strict. Go live there. All the laws you could relish.

One more time: PEOPLE are killing. GUNS are the implement. If you take away the guns, only the law-abiding folks will be without them. If you had some sort of magic (maybe Al Gore will "invent" this as his next "invention") that would collect ALL guns, the PEOPLE that would have killed with them will kill with SOMETHING ELSE!

I realize that this is a TOUGH concept, but take some baby steps with it at first. It is a little complex, and there are some multi-syllabic words in there...

>The kid would have never shot the teacher had:
> 1. he not had access to the weapon
> 2. had the weapon been a "smart gun" which prohibits anyone but the
> owner to use.
Hindsight and opinion......ZZZZZzzzzzzzz....
He might have set the teacher's house on fire killing the whole family, he might have used a bomb and blow up the whole classroom full of people. YOU don't know WHAT he would have done. Yes, it's horrible, but it could have been WORSE.

You just see an "easy" way to make a cheap shot, without FACTS to back it up.

>Things like kids carrying guns to school as a joke or taking guns
>into schools to murder classmates or teachers is REPUGNANT and MUST BE
>STOPPED one way or the other.
So, then, try alternate methods. Like actual ACCOUNTABILTY and PUNSIHMENT. If crime doesn't PAY, then NOBODY wants it. When it's easy

and forgiven or the BLAME is shifted Klinton-style to a MANUFACTURER, then things get pretty screwy (...you know, LIBERAL).

>Three cheers for Smith & Wesson the first gun manufacturer that will
>implement the "smart gun" idea. It should become mandatory for all
>such manufacturers to follow suit and by God, it will be.
Again, this is a band-aid trying to fix a decaptation. Nice idea in some ways, but think of the implications. Once AGAIN, the criminal is only SLIGHTLY inconvenienced, but he will prevail. This is treating the symptom, but not the SOURCE.

Your methods will outlaw EVERYTHING, and the PROBLEM will still exist. Meanwhile, you've wasted everyone and everything, and STILL have no valid solution.

> Governments are here in western civilization to SERVE the people and it's
> become quite clear that modern day America has gone crazy with violence and
> guns THEREFORE the government must not only SERVE, but SAVE.
There's that Liberal BIG GUVMINT thing again. Show me ONE example where BIG government was a Good Thing.

>We refuse to save ourselves therefore legislation will be passed to do
>it.
Excuse me, but who, EXACTLY is WE?
YOU?
You now speak for the country?

>obvious it has deviated from being a reliable, responsible and
>honorable organization into one of gun running, militancy, money
>grubbing and complete incompetence ALL UNDER THE PRETENSE OF SAVING THE
>2nd AMENDMENT.
Opinion......ZZZZZZZZZzzzzzzzzz......
I want PROOF of this claim.

>The NRA attitude is as dangerous to the health and welfare of this
>nation as was that of the unchecked and murderous cigarette companies
>who had a RIGHT to kill us.
Ummmm...'scuse me, but the NRA's attitude is what allowed this country to come into being. The NRA isn't killing, the CRIMINALS are.

Moreover, the tobacco industry never had the RIGHT to do anything. What they HAD was corruption, and payoffs, because the government got HUGE amounts of MONEY from this industry.

It's odd that you lash out at the NRA when it is the government that is "money grubbing and complete incompetence".

>LIKE HELL with the latter and the time has come to make things mighty
>tough for Heston and LaPierre and Gore will do it. VOTE FOR AL!
Gore wants to DISARM THE POPULACE.
I wouldn't trust Gore to take out my garbage, and here you are trying to

ask me to vote him in for the leader of the free world?

A vote for Gore is like a vote for Stalin.

You're a TV baby, aren't you?

Regardless of how much of a fight one puts up, murder is still murder, no matter what weapon is used, even if it's your bare hands.

...and I see you've only picked one part of my post to respond to, conveniently ignoring the part about it being illegal for minors to possess handguns, and how long guns have been in our society. You've gotten a little touchy in the past when someone has done this to you.

Mr. Pot, meet Mr. Kettle

Simple. They'd be utilized by shortwave broadcast stations, and perhaps maybe long range commercial stations.

It would be a helluva lot better than the mundane blather about the weather and health problems, as well as the DXers and contesters that seem to have overtaken the bands. Wallpaper chasers only serve themselves.

We'd love to hear from him. He may find that we're civil, educated, enjoy peace and contentment, and are generally prepared to face the daunting task of defending peace and quiet enjoyment against the assaults of the criminal sector.

We'd show him what peace and contentment confidence brings, so we can concentrate on business, family, and quality of life. Like the Swiss. I'll bet Jeff doesn't know the Swiss are an armed people. Every able bodied citizen is in the military, which is something that we've lost sight of. But every household has a military assault weapon and must have at least one person in the household proficient in its use. I'll be Jeff doesn't know that this policy of armed neutrality has made Switzerland the only hand's off nation in Europe, without so much as an attempt at invasion since the 12th century. Even HITLER was afraid to screw with them.

Yes, we'd love to meet with Jeff. He might find that he learns something from the experience. Or we will. Either way, it's win-win.

Noooo Timmy .. careful there .. remember that The Amazing AlGore gave us the internet. Look out or he might take it away from us.

Looking back at Dan's post that NY and Hillary deserve each other .. I have to part company with that one. NOBODY deserves Hillary. Except Kommisar Klinton. And he deserves Queen Hillary for a cell mate.

I do hope that come November, the good taxpayers of New York will go to the polls in record numbers and speak clearly to this issue.

It's up to the taxpayers. We know where the illegal immigrants (yes .. they vote) and the welfare parasites stand on this. If the taxpayers don't turn out, Hillary wins in a walk. KK4TL said that.

This is a long shot --- but, here goes:

The radio in my wife's '91 Ford Explorer suddenly has only one volume ---- LOUD! None of the buttons work except the "Power". Thank goodness we can shut it off.

I thought there might be some way to re-set the processor. Does anyone know how to do that? Anyone ever heard of this before? Any ideas?

Sheer propagandistic gun toting crap and I can prove that Youngblood lies
and Volz swears to it. Hitler spoke to the Austrian people in 1935
advocating gun control? Nonsense for two reasons. (1) Possession of weapons
by Austrians was non-existent and secondly, Hitler seized Austria and
occupied the capital Vienna(Wien) on March 12,1938, three years after
Badblood said the speech was delivered. Do me a favor Badblood and
Volz-before you try to convince the ill-informed on this board of your lies,
don't assume that everyone is stupid enough to believe them.

Tim,
You ask that I move over so that liars can take over? Of course I can prove my claims while you can't because they're untrue. After W.W.II ended, the Allies prohibited any of the Central Powers or allies to manufacture weapons and Austria, known as Ostmark, had always been allied with Germany since both nations have always been warmongering buddies. What was good for Germany was good for Austria. In 1935 Austria was governed by a liberal Christian democrat named Kurt Von Schussnigg who was finally assassinated by Austrian Nazis to allow a subversive takeover by Berlin and I ain't taking Irving. When Adolf moved in on 3/12/38, he installed Arthur Seyss-Inquart as Prime Minister who, in 1946, was hanged in Nuremberg. As you see I am very very well versed in 20th century European history and therefore have the credentials to show up Youngblood for the gun toting liar he is. Unfortunately you went along with him in an effort at making Heston the king of America but this here guy, 20 years your senior, called your bluff. Tim vote for Al Gore and toss your guns into Lake Mead.

Good 'Ol Barry. 1964 (?). The first presidential election I got seriously
interested in. He'd make most sane folks proud to be an Arizonan. I thought
he'd make a fine president and Johnson defeated him in a land slide victory
USING "The Greaaaaaaaaaaat Society!" I never went to Arizona, but Jesse Helms
makes me proud to be a Tar Heel. <g>

73,

Al

Go out into the dark tonight with no lights around. Start the car and open the hood. Look around all the spark plug wires, distributor cap and plug ends to see where the big spark gap transmitter is arcing to the block. Pay particular attention wherever metal comes near the plug wires.

They probably pulled one of the wires apart or cracked it against something and now you either have a series arcing in the plug wires or to ground....

Next time you buy a car....BUY A DIESEL! The only thing electronic in my 1973 Mercedes 220D is the clock...(c; There is no difference in noise between engine off and full throttle!

Emergencies. When a disaster happens, enough hams usually survive
with equipment to provide emergency communications. And it doesn't
cost the govermment anything except spectrum.

Unlike fast food and soda, amatuer radio has a very limited market.

> 80% ARRL books on the shelves of a store, or a group, doesn't
>indicate the breadth of ham books out there. The choices are wide
>and deep, as my own collection reflects.

It would be interesting to see a listing of all amateur radio-related publications that were produced in the past year, and who they were published by. My observations at AES were just a random sampling, and they're the only commercial dealer in the area. There were a few others, and I don't know if they're still in business, but they carried equipment and very few, if any, publications.

There is a flea market every Tuesday about 3 miles from where I live. I
can go there anytime and purchase a rifle or pistol, no questions asked.
I see it every week. The sellers are not undercover agents, they have
been there for years and I have never heard of anyone getting arrested
for buying or selling a firearm. I have even see the local police there
several times and never questioning a buyer or seller.

Smoking is not essential to YOU. Others may consider it an essential part of their enjoyment of life - they enjoy smoking and their enjoyment makes them happy. And, according to the Declaration of Independence, the pursuit of happiness is a right.

And before the government can take away a right, it must have an overwhelming reason to do so. And there is no more of an overwhelming reason to remove cigarette pollution than there is to remove car pollution. Therefore, one cannot be allowed while the other is banned. Or, if you prefer, if one must be banned, so must the other. Any less of a standard is simply unjust.

Now, I have no problem with reasonable restrictions on cigarette smoking. Set aside a smoking area in the resturant and there is no problem. However, to ban smoking in that resturant entirely is unreasonable. Or to use you "jambox" analogy, it is reasonable to say that the volume must be lowered, but to ban the "jambox" from all resturants is unreasonable.

By the way, one can argue that the automobile is not essential. Man existed on this planet for thousands of years without an automobile. But, that is perhaps a debate for another time.

> "Smart Radios" that can only be turned on by their licensed
> users!

Probably not Larry, although you should know that:

1) Most 8 year olds (usually males) will be able to fluently quote
George Carlin's "Seven Dirty Words" at the drop of a hat. I know
that I could do it when I was 8 years old in 1977 - grin

2) Most kids are exposed to suggestive speech by the time their
10 yrs old from sources like commercial radio, television, video
games - and more increasingly on the Internet.

3) It is HIGHLY DOUBTFUL that your *average* 8 year old will hear
adult style language on ham radio, as most 8 year olds DO NOT
EVEN KNOW what ham radio is. Nor could they probably care
less when there are things marketed and customized to them like
Sega-Genesis, Pokemon and other such items of juvenile amusement.

4) "Smart Radios" (?) Only someone as anyl-retentive and technologically
backwards as Ham Radio Operators would be so silly as to suggest
something as this. (the "V-Chip" was an unworkable technology)
Yes, Washingtoon would probably toy with the idea of a "smart radio"
just like they toyed with the idea of "smart guns" and "smart cars".

Tech lesson # 66: "Smart Cars" are those keyless entry systems and
Key mounted PADS devices
that you can now purchase countermeasures/device kits for in Nuts and
Volts magazine - about $75 is all it will cost you for a device that
will
duplicate the keychain remote entry system, and defeats the lock and
alarm, giving you access to ANY car so equipped. Let's go "car
shopping" at
the shopping center parking lot Larry! [no, I do not condone auto
theft, but I
do say: "so much for smart technology" ha!]

Found this article in another NG.
It may be interesting to radio enthusiasts.
Scanner users may want to program the
frequencies of their local utility into their
radios for future live listening !

--------- begin quoted article ---------------

High-energy nation could pull the plug on the power grid

By LISA HOFFMAN
Scripps Howard News Service
May 29, 2000

- You grab a few cubes from the ice-maker for your iced tea, nuke a frozen pizza in the microwave, toss a load of wash in the dryer, notch up the AC, crank the stereo, scan in a couple of photos to e-mail to relatives, and sit back for an evening cruising the Internet.

Upstairs, the kids are styling their hair, playing computer games and listening to the radio, while your spouse is in the basement office finishing the spreadsheet work that didn't get done that day on the job.

That seemingly serene summer scenario is anything but that for those in charge of supplying electricity to the nation.

Energy experts warn that the onset of the hot season, coupled with the recent acceleration in the wiring of America, is likely to bring months of power brownout and blackout alerts in unprecedented number.

As demand drains supply, the cost of power for companies and consumers is headed for a dramatic uptick. Peak-time prices hundreds of times higher than usual are forecast this summer in some regions.

Why? Combine a sizzling economy, an explosion of computer users at home and on the job, and a proliferation of other electronic devices ruled by microprocessors for work and play. The result is a ravenous appetite for reliable electricity that must travel over a lagging transmission system designed for a largely bygone era.

"The system, designed as a two-lane road, is now being used as an autobahn or New Jersey Turnpike," said James Owen, spokesman for the Edison Electric Institute, an interest group of private electric companies.

Particularly worried is the burgeoning high-tech industry, as well as firms engaged in Internet commerce or otherwise dependent on e-mail and similar online ways of doing business.

For them, a blackout, or complete power failure, can be ruinous. From online stock trading outfits to such Internet merchants as eBay and Amazon.com, every minute the power is out can mean millions of dollars lost.

Brownouts _ caused by intentional cutbacks in electrical juice _ also can wreak havoc on sensitive equipment, including that used by everything from ATM machines to auto mechanics. Surges or other blips, even those imperceptible to an office worker, can knock a microprocessor for a loop.

The digital world, according to experts, demands a power supply that is essentially 99.9999 percent steady and reliable. Despite its stresses, the U.S. system is remarkably dependable, but even so, the average residential customer can count on glitches causing a cumulative seven or eight hours without power a year.

That would be catastrophic for new economy enterprises, where a disruption as brief as "one-60th of one second is enough to make everything go blooey," said Karl Stahlkopf, vice president of the non-profit Electric Power Research Institute in Palo Alto, Calif.

Estimates are that the economy will lose more than $25 billion a year as a result of power disruptions which, until the digital age, were far from rare but hardly so crippling.

In the past decade alone, the power "load," or demand, has increased 35 percent while the capacity to get that electricity to users has grown only 18 percent. Conservative forecasts predict another 20 percent boost in demand ahead, but no more than a 4 percent hike in transmission capacity. A big part of the problem is that no one wants new power poles or stations near their homes or businesses.

Complicating the situation is the ongoing deregulation of the power industry.

"The country is increasingly sensitive to any type of disruption," said Jamie Wimberly, vice president of the Consumer Energy Council, a watchdog group in Washington.

Already this summer, the Silicon Valley region of California, broiling now in a heat wave, is being warned by Pacific Gas & Electric to make a concerted conservation effort or face significant power problems and financial penalties. Energy experts expect the same situation to bedevil other parts of the country this summer, particularly in other high-tech hubs.

Some technology firms are shelling out big bucks to build their own power plants to insulate themselves from disruptions. In Redwood Shores, Calif., for instance, computer hardware and software giant Oracle Corp. has spent $6 million to construct its own generators and substation system.

The Energy Department and conservation groups have begun to amplify their calls for the country to cut back consumption through more energy-efficient appliances and power-stingy habits.

Some in the industry are demanding more financial incentives to stimulate investment in the nation's power grid, coupled with fewer restrictions from the Federal Energy Regulatory Commission.

"We have to build a type of electrical power infrastructure that will support a microprocessor-based society," Stahlkopf said. "We have very little choice."

Even then be careful with the newer ones. I have ABS brakes in a 93 Transam
with the Corvette engine. Every once in a while they will open the squelch
on VHF. Some times the noise will go away when I touch the pedal, and other
times it will start when I touch it. Sometimes it just stats while driving
down the road...Usually when going slow.

I had the same problem with a '92 S10 Chevy Pickup. HF was almost
impossible to copy. Amazingly enough, my '96 GMC Sierra Pickup
is the quietest vehicle I've ever owned.

Just meant smoking isn't a "necessity"; ie, it is a luxury. Yes, cars can be considered a luxury as well, but we have designed cities and societies where the car is arguably more of a necessity.

Also, when I was a smoker, and under the clutches of the drug, smoking was still not "essential". I always was concerned about those around me and if it was going to offend/irritate, I simply would wait. Uncomfortably, but I would wait.

I did have some friends, however, who would light up in a car on a cold night, and not crack the window. Even as a smoker, this gagged me. I'd ask them to crack the window, but they'd reply "It's coooollllld." Well, then, don't smoke. I'm trying to drive, and my eyes are watering!

I also know smokers who will spend their last $$$'s on smokes, not food or other essentials.

Smoking is a drug. I have been there, and in a way, I still am. All drugs make people illogical, and due to the cravings, this issue will never find a happy medium.

I have a very intelligent freind (Pulitzer Prize, etc.) who chain smokes beyond compare. Before one is out, the next is lit. Most time I have counted was 15 seconds of no lit cigarette. But if I take them away from him, a major battle would ensue. I mean if I took them away for 60 seconds! You can't tell me this is "essential". Desired, maybe, but not "essential". The human body can only metabolize one cigarette per hour.

> And before the government can take away a right, it must have an

> pollution. Therefore, one cannot be allowed while the other is
banned.
> Or, if you prefer, if one must be banned, so must the other. Any less
> of a standard is simply unjust.

Yet another reason why we don't need BIG government making all the rules for us. If I own a restaurant, and I get more money by banning smoking, that is my right to do so. Or vice versa---if smokers are my cash cow, then I will turn away normal people. It's all what the market will bear, and this all falls under opinion, and should never get to the point of it being a LAW.

Problem is we have all this liberal B.S. now where I, as a restaurant owner, must keep both sides happy. In some states this is a LAW. What a crock!

> Now, I have no problem with reasonable restrictions on cigarette
> smoking. Set aside a smoking area in the resturant and there is no

Agreed, but the owner should be able to cater to whoever he wants to. Banning is rediculous.

Yaesu FT-50R with the following for sale. Must sell due to health problem.

Unit in 10/10 condition
Includes:

FT-50R with FTT-12 Voice recorder keypad
1 - 9.6V NiCd, great shape with clip
1 - 6V NiCd, great shape w/ clip
Standard charger
Original box, manual and schematics
ADMS-1E software and programming cable
Stock antenna
Leather belt case with quick remove belt loop

A great system, I'd love to keep but need the money. Unit has been MARS/CAP modded. Asking $300 plus shipping. Click on below link for photo

That's a bit of an exaggeration since contests are not permitted on
the WARC bands.

If you search long enough you'll find a group which might interest you:
Astro Net in which members exchange observation data as they peer into the
nighttime sky with their telescopes, the scuba divers net where discussion
includes coral reefs and ocean heating (which is causing a rise in ocean
level), senior war vets exchanging history-packed war stories, on-the-air
chess games, the Geology Net in which amateur gem hunters discuss recent
finds, the Society of Wireless Pioneers Net where former professional
radiomen meet and exchange stories, plus dozens more. I'm sure there is
some group out there which would appeal to you.

Whoa! I don't know if I can believe that one. Where did you find the
DOE statement?

Even if it's true, most of that one third power loss would be as non-rf
noise producing heat in the resistance of power line and transformer
conductors and transformer core losses. Some (not much) might be
corona discharge and arcing across damaged insullators, but surely not
much.

That brings up the old question: Can a kit be considered "homebrew"? Liberal thinkers will say "yes," for one assembles the rig component by component. Conservative builders will say "no," for all the parts are supplied for you and the step-by-step instructions are fool-proof.

I have a mix of HB, kit, and appliance gear. For example, my 40m VFO is HB but used with the DX-60 xmtr, a kit. The Galaxy GT-550 is appliance, but with as much rebuilding as I've done, maybe it should be considered a kit.

Most of these(and many more) groups exist on the Internet, right now.
They are also much more effecient, because all messages in a discussion
are saved forever(theoretically) - so the discussions can take place at
everyone's convenience.

The technology exists to make an Internet voice net that would provide
all the benefits, and none of the drawbacks, of an HF voice net. Hardly
anyone seems to be interested in this kind of thing, though.

It's not surprising to see that kevin strom has now chimed in on this issue. Are we to believe that Kevin is truthful and "unbiased?" I think not. W9ART is very rarely on 3950. When he is it is usually for just a short qso with some of the people on that frequency. I have not ART intentionally jam anyone for well over a year or so. Granted I am not on or listening every time W9ART is on frequency but have heard and spoke with him several times. I have heard W9ART try to check in to the "So Called" liberty net and for Kevin or anyone else to assume that ART's attempt to check in was false or not genuine is just that, an assumption. Since he nor WA9JKI has been able to "successfully check in" (be recognized) they nor anyone else are able to say whether the attempted check -in was anything other than that, an attempt to check in. The fact that this group is able to exclude licensed individuals from checking in bounces us right back to the "initial" problem, that of a "private" frequency. One to be used by the "selected" individuals to transmit? the same *theme* over and over, week in and week out. The exclusion of any licensed operator should be looked at Mr. Hollingsworth.
On another note, Kevin Strom's paranoic claim that the statement "should be shot" is a death threat is just another attempt from him to "demonize" someone that disagrees with his or the "So Called" net's propaganda. The statement "should be shot" is nothing more than an opinion and is not in itself a death threat since ART in no way indicated intention, only that he believes that it should be done.
To such a paranoid mind as Kevin's, even the slightest possible hint that someone might not wish him well set his mind into the "real and present danger" mode
without any evaluation of the validity of such a remark Hell, I or other may believe the same thing. KK7HO

Subject: W9ART's response
From: Kevin Alfred Strom <kevin.strom@innocent.com>
Date: 2000/05/30
Newsgroups: rec.radio.amateur.misc
Dear Mr. Hollingsworth:

I have been off the air for a few weeks, having recently gotten married and also being very busy with business and personal affairs.

When I returned home I found that there had been several developments in FCC enforcement. I was particularly pleased to see that, finally, further action was being taken against long-time incorrigible jammers WA9KJI and W9ART.

I note that W9ART's response to your recent enforcement letter has been posted to Usenet and other discussion groups, as well as to one

of the pro-jammer web pages:

(http://dgk5mvk.tripod.com/Arts_Letter.htm).

Since the text is substantially the same in each case, I'm assuming
that the letter from Visser is genuine. I'd like to comment on a few
of W9ART's assertions of which I have direct and personal knowledge.

Visser wrote:

> I want to share one other item with you which I believe lends credibility to
my
> suggestion that this is nothing more than a 'set-up'. The following is from
the
> LIBERTY NET MESSAGE BOARD and is entitled, WILL IT WORK AGAIN?

> Wanted: "Immediate need for affidavit stating that on a date (as yet to be
> determined) KJI was in QSO with ART. Will trade for 3-500's or MD 20/20. More
> as details become available."

The message to which Visser is referring was posted anonymously to
the "Liberty Net Message Board"

(http://www.nationlink.com/liberty/wwwboard.html)

as many such anonymous messages are, many by those supporting the
jammers of the net in question. However, this message was merely a
humorous reference to the infamous "KJI/CXJ Affidavit," implying
that ART and KJI would "weasel out" of their current predicament by
producing a fraudulent affidavit claiming they were "actually in
QSO" during their episodes of intentional interference. It obviously
had nothing to do with a "set up" of W9ART. Furthermore, it seems
extremely unlikely to me that anyone engineering such a "set up"
would have posted a request for assistance on a public message
board. Mr. Visser is obviously reaching very far afield to obscure
the issue of his malicious interference and other illegal behavior
on amateur radio.

Visser wrote:

> I have NEVER made a death threat to any person

This is a lie. Mr. Visser can be heard stating over and over again
over amateur radio that I "should be shot in the head" during one of
his jamming sessions which I happened to record and which is
archived at:

http://members.xoom.com/kevin_strom/w9art_deaththreat_19991224_0515pmcst.wav

This, you may recall, was the jamming/murder-threat incident which
earned Mr. Visser his first warning from you. Mr. Visser has also
made other threats of violence over amateur radio. He has also made
grossly obscene transmissions as part of his intentional

interference campaign, once transmitting the allegation that one of his perceived enemies was a "sperm-burping bitch" repeatedly and unceasingly for over an hour on top of an existing QSO. These are only a tiny fraction of the obscene, illegal, and intolerable acts of Mr. Visser over amateur radio.

Since receiving his first warning, I can confirm that Mr. Visser has continued his illegal intentional interference activities. Mr. Visser often intentionally interferes by pretending to check in to QSOs where he knows his presence is not wanted, even continuing his repeated fake "check-ins" at lengths exceeding several minutes in a sneering, mocking voice which makes it very clear that his intention is to disrupt. An example of this is available in .wav format at:

http://members.xoom.com/kevin_strom/w9art_jammingLN_20000115_0905pmcst.wav

When the phony "check-in" ploy fails, he often makes lengthy insulting commentaries about other amateur operators over top of the stations which he is insulting, in a flagrant violation of the amateur regulations.

Mr. Visser has been a little "slicker" in his jamming sessions since receiving his first warning, but his malicious interference has continued.

Visser wrote:

> The truth
> is that what they are angry about is not my so-called harassment, but the fact
> that I do not agree with them.

That's another outright lie. I'm a rare though occasional participant in the Liberty Net discussions, and I know many of the "regulars" as radio and real world friends, including Mr. Lauterbach.

We don't always agree with each other, for goodness' sake, and we certainly don't try to get licenses pulled of those with whom we disagree. Considering the wide range of views out there, we'd certainly be busy if we tried.

The problem with W9ART is not his views on any subject, about which no one cares very much that I can tell. The problem is his intentional interference which has been going on for years. If you can put a permanent stop to that, all of amateur radio will be permanently in your debt.

With every good wish,

Kevin, WB4AIO.

And they just reported that WWII aged veterans were dying at a rate of
1000 per week and the national cemeteries are filling up. Guess the Army
and the ARS are both bad bets. Wonder how scared the VFW is (using the
same logic as the original poster) about their decreasing numbers.

Maybe if we had a few more wars, they could promote and increase
membership???

Who knows, if G. W is elected, he could send a few 100k to the middle
east just like his old man, so that the Tx Oil Barons can keep their
restrictive club memberships current.

Okay, Jeff, I'll repeat this one more time, you are not free to use a callsign that was issued, by the government, to someone else. If you want specific code concerning identy theft, see the example below. Note that this is only one example - there are other federal laws on the books (covering related issues) and many state laws relating to this. Look it up yourself.

Note that Section 1028 defines "means of identification" as any name or number that may be used alone or in conjunction with any other information to identy a specific individual - including, but not limited to, a name, social security number, date of birth, official state or government issued driverï¿½s license or identification number, alien registration number, government passport number, employer or taxpayer identification number. Similar definitions exist in almost all other laws pertaining to identity theft.

This act makes identity theft a Federal crime with penalties up to 15 years imprisonment and a maximum fine of $250,000. Also note that identity theft itself is a crime - it is not dependant on other circunstances, such as what the identification number was origionally issued for, where it was done, how it was done, or if damages actually exist.

Now, since my callsign is obviously a government issued identification number, and is designed to be used to identify a specific individual, it is clear that my callsign is a "means of identification" that is protected by this code.

My name, and address, is associated with that callsign on a government database. And I can face financial penalties, and loss of privileges, of that callsign is used improperly. Therefore, I have as much of an interest in protecting the use of that callsign as I would have in protecting the use of my credit card number or driver's license number.

PREFACE

Identity Theft and Assumption Deterrence Act of 1998

Title 18 United States Code - Section 1028
Fraud and Related Activity in Connection with Identification Documents
and Information.

The Identity Theft and Assumption Deterrence Act of 1998 which became effective October 30, 1998, makes identity theft a Federal crime with penalties up to 15 years imprisonment and a maximum fine of $250,000. It establishes that the person whose identity was stolen is a true victim. Previously, only the credit grantors who suffered monetary losses were considered victims. This legislation enables the Secret Service, the Federal Bureau of Investigation, and other law enforcement agencies to combat this crime. It allows for the identity theft victim to seek restitution if there is a conviction. It also establishes the Federal Trade Commission as a central agency to act as a clearinghouse for complaints, (against credit reporting agencies and credit grantors) referrals, and resources for assistance for victims of identity theft. This statute may serve as a model for your state to enact similar legislation. It should also provide you leverage to influence law enforcement to investigate your case.

THE CODE

Title 18 USC 1028:

(a) Whoever, in a circumstance described in subsection (c) of this section --

1.knowingly and without lawful authority produces an identification document or a false identification document;

2.knowingly transfers an identification document or a false identification document knowing that such document was stolen or produced without lawful authority;

3.knowingly possesses with intent to use unlawfully or transfer unlawfully five or more identification documents (other than those issued lawfully for the use of the possessor) or false identification documents;

4.knowingly possesses an identification document (other than one issued lawfully for the use of the possessor) or a false identification document, with the intent such document be used to defraud the United States;

5.knowingly produces, transfers, or possesses a document-making implement with the intent such document-making implement will be used in the production of a false identification document or another document-making implement which will be so used;

6.knowingly possess an identification document that is or appears to be an identification document of the United States which is stolen or produced without lawful authority knowing that such document was stolen or produced without such authority shall be punished as provided in subsection (b) of this section; or

7.knowingly transfers or uses, without lawful authority, a means of identification of another person with the intent to commit, or to aid or abet, any unlawful activity that constitutes a violation of Federal law or that constitutes a felony under any applicable State or local law;

(b) The punishment for an offense under subsection (a) of this section is --

1.except as provided in paragraph (3) and (4), a fine under this title or imprisonment for not more than 15 years, or both, if the offense is
--

(A) the production or transfer of an identification document or false identification document that is or appears to be --

(i) an identification document issued by or under the authority of the United States; or

(ii) a birth certificate, or a driver's license or personal identification card;

(B) the production or transfer of more than five identification documents or false identification documents;

(C) an offense under paragraph (5) of such subsection; or

(D) an offense under paragraph (7) of such subsection that involves the transfer or use of 1 or more means of identification if, as a result of the offense, any individual committing the offense obtains anything of value aggregating $1,000 or more during any 1-year period;

2. except as provided in paragraphs (3) and (4), a fine under this title or imprisonment for not more than three years, or both, if the offense is --

(A) any other production, transfer, or use of means of identification, an identification document, or a false identification document; or

(B) an offense under paragraph (3) or (7) of such subsection;

3. a fine under this title or imprisonment for not more than 20 years, or both, if the offense is committed --

(A) to facilitate a drug trafficking crime (as defined in section 929(a)(2)) or this title;

(B) in connection with a crime of violence (as defined in section 924(c)(3)); or

(C) after a prior conviction under this section becomes final;

4. a fine under this title or imprisonment for not more than 25 years, or both, if the offense is committed to facilitate an act of international terrorism (as defined in section 2331(1) of this title);

5. in the case of any offense under subsection (a), forfeiture to the United States of any personal property used or intended to be used to commit the offense; and

6. a fine under this title or imprisonment for not more than one year, or both, in any other case.

(c) The circumstance referred to in subsection (a) of this section is that --

1.the identification document or false identification document is or appears to be issued by or under the authority of the United States or the document-making implement is designed or suited for making such an identification document or false identification document;

2.the offense is an offense under subsection (a)(4) of this section; or

3.either --

A.the production, transfer, possession, or use prohibited by this section is in or affects interstate or foreign commerce; or

B.the means of identification, identification documents, false identification document, or document-making implement is transported in the mail in the course of the production, transfer, possession, or use prohibited by this section.

(d) In this section --

1.the term "document-making implement" means any implement, impression, electronic device, or computer hardware or software, that is specifically configured or primarily used for making an identification document, a false identification document, or another document-making implement;

2.the term "identification document" means a document made or issued by or under the authority of the United States Government, a State, political subdivision of a State, a foreign government, political subdivision of a foreign government, an international governmental or an international quasi-governmental organization which, when completed with information concerning a particular individual, is a type intended to commonly accepted for the purpose of identification of individuals;

3.the term "means of identification" means any name or number that may be used, alone or in conjunction with any other information, to identify a specific individual, including any --

A.name, social security number, date of birth, official State or government issued driverï¿½s license or identification number, alien registration number, government passport number, employer or taxpayer

identification number;

B.unique biometric data, such as fingerprint, voice print, retina or iris image, or other unique physical representation;

C.unique electronic identification number, address, or routing code; or

D.telecommunications identifying information or access device (as defined in section 1029(e));

4. the term "personal identification card" means an identification document issued by a State local government solely for the purpose of identification;

5. the term "produce" includes alter, authenticate, or assemble; and

6. the term "State" includes any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, and any other commonwealth, possession or territory of the United States.

(e) This section does not prohibit any lawfully authorized investigative, protective, or intelligence activity of a law enforcement agency of the United States, a State, or a political subdivision of a State, or of an intelligence agency of the United States, or any activity authorized under chapter 224 of this title.

(f) Attempt and Conspiracy ï¿½ Any person who attempts or conspires to commit any offense of this section shall be subject to the same penalties as those prescribed for the offense, the commission of which was the object of the attempt or conspiracy.

(g) Forfeiture Procedures ï¿½ The forfeiture of property under this section, including any seizure and disposition of the property and any related judicial or administrative proceeding, shall be governed by the provisions of section 413 (other than subsection

(d) of that section) of the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 853).

(h) Rule of Construction ï¿½ For purpose of subsection (a)(7), a single identification document or false identification document that contains 1 or more means of identification shall be construed to be 1 means of identification.

Identity Theft and Assumption Deterrence Act of 1998
(This was included in the Bill signed by the President.)

CENTRALIZED COMPLAINT AND CONSUMER EDUCATION SERVICE FOR VICTIMS OF IDENTITY THEFT.

(a) IN GENERAL ï¿½ Not later than 1 year after the date of enactment of this Act, (October 30, 1998) the Federal Trade Commission shall establish procedures to ï¿½

1.log and acknowledge the receipt of complaints by individuals who certify that they have a reasonable belief that 1 or more of their means of identification (as defined in section 1028 of title 18, United States Code, as amended by this Act) have been assumed, stolen, or otherwise unlawfully acquired in violation of section 1028 of title 18, United States Code, as amended by this Act:

2.provide informational materials to individuals described in paragraph (1); and

3.refer complaints described in paragraph (1) to appropriate entities, which may include referral to ï¿½

A.the 3 major national consumer reporting agencies; and

B.appropriate law enforcement agencies for potential law enforcement action.

(b) AUTHORIZATION OF APPROPRIATIONS ï¿½ There are authorized to be appropriated such sums as may be necessary to carry out this section.

Of course they care. The consumer is billed for usage that occurs past all the losses. So any improvement in distribution efficiency means a reduction in necessary generation capacity and fuel.

Most utilities are acutely aware of the loss budgets in their distribution systems. An economic analysis is done on each loss factor to determine if the cost to reduce the loss is greater or less than the cost of generating additional power to make up for the loss. Economic analysis is a big part of electrical engineering.

Perhaps they have been a member for many years - under different email addresses. I've changed my email address several times in the last couple of years - and each time I usually get a new user welcome message from the various newsgroups.

> The overwhelming majority did not respond, indicating one of several

> with blocking or filtering services provided by DejaNews and others
> that prevent them from receiving reply E-mail)
> - they don't care

Or another possibility is that they don't want to encourage unsolicited email by replying to that very email. Every single time I have responded to an email message like this, asking to be removed from the mailing list (or whatever), the amount of unsolicited email (especially from that person) has increased. And, when I ignore unsolicited email, the amount of unsolicited email tends to decrease.

It did not take me long to learn not to reply to this stuff. Now I simply trash unsolicited email without even taking the time to read it (I rarely get past the subject line). And, of course, long-winded messages also get trashed very quickly if I'm not really interested in the topic.

Steve - I'll see your 11 & raise you by 2, this was my 13th year at
Dayton (every year since 1987). My motel was FULL & ran out of
roll-a-way beds & had to issue at least one air mattress.

At the awards drawing, the MC announced the attendance was at roughly
28,000. Since then the ARRL (Dayton was the ARRL National Convention
this year) announced the attendance at being slightly over 30,000.

BTW - At Dayton, often times venders start to leave on Saturday afternoon,
as has happened for many years.

Thanx for the magical flowers, dAFf2Y docduck.

If you were using am Intel-based machine, I could tell you how to check for anonymity and other stuff. However ... if memory serves, you opted for one of the fringe brands with a Motorola processor. Too bad.

I will tell you that I don't want or need anonymity on this reflector.

dAFf2Y duckdoc, there are probably *trained monkeys of nutty Republicans* on the group ROTFL at your petulant display of ignorance of how the 'net functions at a technical level.

For you, dAFf2Y docduck, it's time for remedial computer classes. You may have demonstrated the capacity for learning: I think you went to med school -- somewhere. There may be a trained monkey somewhere who will teach you something about computers and the 'net, and taxpayers' *contributions* to pay your tuition.

To acclimate yourself to monkeys, go to this site: 216.218.248.139 and for your first lab class, find the monkey page. It's a quack -- errrrrr, hoot.

dAFf2Y duckdoc, you're one quacky guy. But don't provoke the wizards, because they are quick to anger and they are subtle.

Your quack to this august and puissant newsgroup. As you were. K3BHJ.

You're right, Roy. It has a MECHANICAL voltage regulator that's
unaffected by the 650W coming out of the 15' monster Bugcatcher
homebrew antenna. All the DC electricals are also mechanically
operated, except for the analog quartz clock......

Most hams have ignition noise, ad nauseum. Actually I do to, from all
the cars that get near me. Luckily, they are only temporary.

Did you all know that ONE THIRD of the AC power generated in this
country is wasted by the electrical distribution system, according to
the DoE? THAT'S the biggest noise in my HF mobile installation. I
use a JPS NIR-10 audio signal processor to get rid of most of it.....

In today's junk society, the real problem is going to be those who try and take advantage of the situation. Power grid trouble = looters, scam artists, and other criminals who will attempt to prey on the vunerable. Lock and load, especially if you live in a city.

Remember how he fought the establishment, with tax dollars, of Soul City? At the VERY SAME TIME that they were FORCING the busing of students across the county (both ways) to force integration -- against the wishes of whites and blacks whose children were being subjected to an additional 2 hr bus ride (1 hr am and 1 hr pm) every day, in all kinds of weather they were using TAX DOLLARS to build a BLACK CITY! One man, and his wife, got rich off the deal. The tax payers are no better off. It still has not produced a profit. Right now, it houses a prison and clinic to give away services at the expense of tax payers. I don't know of another useful purpose it serves, unless it's a perfect example of government inefficiency and stupidity!

Reminds me of what some Arizona congressman is credited with saying about daylight savings time, "It makes fools out of men and liars out of clocks." -- or something to that effect.

This seems especially appropriate during this Hamfest season...

This truck driver hauling a tractor-trailer load of ham gear and computers stops for a beer. As he approaches the bar he sees a big sign on the door saying:
"Nerds Not Allowed - Enter At Your Own Risk!"
He goes in and sits down. The bartender comes over to him, sniffs, says, "You smell kind of nerdy. What do you do for a living?"

The truck driver says, "I drive a truck, and the smell is just from the ham gear and computers I am hauling." The bartender says, "Okay, truck drivers are not nerds." and serves him a beer. As he is sipping his beer, a skinny guy walks in with tape around his glasses, a pocket protector with twelve kinds of pens and pencils, and a belt at least a foot too long. The bartender, without saying a word, pulls out a shotgun and blows the guy away.

The truck driver said, totally shocked, "Why did you do that?" The bartender said, "Not to worry, the nerds are overpopulating Silicon Valley and the hamfests and are in season now. You don't even need a license." The truck driver finishes his beer, gets back in his truck, and heads back onto the freeway. Suddenly he veers to avoid an accident, and the load shifts. The back door breaks open and ham gear and computers spill out all over the freeway. He jumps out and sees a crowd already forming, grabbing up the ham gear and computers. They are all hams, engineers, accountants and programmers wearing the nerdiest clothes he has ever seen. He can't let them steal his whole load. So, remembering what happened in the bar, he pulls out his gun and starts blasting away, felling several of them instantly.

A highway patrol officer comes zooming up and jumps out of the car screaming at him to stop.

The truck driver said, "What's wrong? I thought nerds were in season."

"Well, sure," said the patrolman."But you can't bait 'em."

Simpleton George W. will be running with Missouri senator John Danforth as his choice for veep. WOW-what a thrill.
Danforth is 63 and an ORDAINED EPISCOPALIAN MINISTER! That is reason enough to vote for Al Gore! As I said, George W. is making the same mistake as his old man by choosing a putz for a running mate. A man of the cloth has NO BUSINESS being Vice Prez. of this country and you know it. Keep religion out of politics. It's basic. Fundamental. Hello, G.O.P. fools. Are you following this?
Danforth is also Mr. Big Bucks since he's part of the Ralston Purina enterprise and as we all know, Republicans care nothing about the average Joe in this country which now Danforth reinforces.
He is on the Board of Directors of Time Warner...wow...yep, he sure cares about the average Joe in America. What a joke.
How disgusting. Uppity George W. and uppity John Danforth, two peas in a pod and you actually believe that this duo will beat Al Gore and his running mate?
I'll laugh all the way to the voting booth and back again. Gore won't beat Bush. He'll DESTROY him.
AF2Y,Doc

All good and valid points...However.....ALGORE is not the problem.
Hillary is....and why? The NY Senate seat is a springboard for higher
office. What we really need to be worried about is Hillary making a
run for the presidency. You think Bill was bad? You ain't seen
nothing yet.

I have three German language texts regarding W.W.II. The first is called "Die Illustrierte Geschichte des Zweiten Weltkriegs" . The second is a 600 pager called "Der zweite Weltkrieg" and the third, "Das Urteil von Nï¿½rnberg." So far no where in either can I find a reference to any Nazi Weapons Law of 1938 which would be listed under "NSDAP Waffengesetz 1938" and furthermore there's no reference to it under the aegis of Wilhelm Frick who was hanged at Nï¿½rnberg. Therefore I must conclude at this time that you are truly a dumb Frick who knows nothing about German history and is intent on spreading misinformation to suit your own political agenda.
Furthermore anyone who has the audacity to try and teach me something about the war years must be able to spell STRATEGY which you can't. From whom did you learn spelling, K2IVX? Additionally if any gun control law was passed in Nazi Germany, which never happened, it would have had to been done before 1938 because of the fact that Hitler seized power on Jan.30,1933 and had to consolidate his hold on the nation immediately. He did it by first burning down the Reichstag a month later and blaming it on a Dutch communist and then on June 30,1934, assassinating long time friend Ernst Rï¿½hm, head of the S.A. along with thousands of S.A. members in order to end all opposition to the SS, Hitler's favorite gangster rap group. These S.A. murders was known as "The Night of the Long Knives."
I suggest you take your stupid propaganda elsewhere Badblood because I have more knowledge in my toe than you have in your whole citrus polluted brain.

The
> man is a trained monkey of nutty Republicans.

Always arguing about the esoteric; never any substance. Typical liberal
B.S.....zzzzzZZZZZZzzz.....

"Trained monkey"="AF2Y and a whois utility".

Anybody else knows an anonymous post.

Anonymous posting is a Good Thing; it allows one to make a point
or comment while avoiding liberal preconceptions whose sole purpose
is to divert focus from the actual issue at hand.

Also, "nutty Republicans"? This was once a greatER nation than it is
today; the last 40 years of liberal boneheadedness is trashing most,
if not all, of what the forefathers sacrificed to design.

"licensed or registered to use a computer" Hmmm....you'd really like
that to come to be, wouldn't you....

The time has come for a McCarthy revival. Damned communists are
everywhere...

No doubt. I wrote that as serious.

I liked Reagan. But the liberal media,
with their incessant undermining, did
help ruin him. Lemmings/droids like
AF2Y buy every bit of it, mindless
as they are.

Time to get the lame-o's like Gore
out of politics. Only choice I saw
this time was McCain. Now, it's Bush,
but that's a counter-vote to keep
the free world from being run by
an airhead, Gore.

I am planning my first cruise ship vacation for mid July. Does anyone know if it would be worthwhile to bring my W32 ICOM ht (144/440)? Can I find QSO's down there and are there any repeaters? I would like to talk to the locals to get some advice before landing at Jamaica and Grand Cayman. Also, the ht has pretty good receive coverage. How can I find the frequencies used by the cruise ships? Mine is in the Celebrity Cruise fleet. I will post the latter question on the scanner news group.

Thanks in advance for any advice you can offer.

Guys, I've got a theory here. Take it and run with it.
Remember the Martians landing in N. J. during "War of the
Worlds"? They're still there and have imbedded an implant
in AF2Y's brain. That's about all that can account for
his mental aberation. Plain old delusional paranoia doesn't.

LOL!!!! Not exactly. You and the Aids-infected pitbull, mostlikely two of a kind, haven't the ability to tell the truth. I couldn't care less what the rumphumpers and the barflies, etc. think of me. Your ill-educated opinion is quite evident. Use your brain, dumbass, it's the SMALL things that count.

5340. W9ART's response

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-30 00:00:00 UTC
From: Kevin Alfred Strom <kevin.strom@innocent.com>
Message-ID: <39341638.9CD60014@innocent.com>
Source record: 110126

Dear Mr. Hollingsworth:

I have been off the air for a few weeks, having recently gotten married and also being very busy with business and personal affairs.

When I returned home I found that there had been several developments in FCC enforcement. I was particularly pleased to see that, finally, further action was being taken against long-time incorrigible jammers WA9KJI and W9ART.

I note that W9ART's response to your recent enforcement letter has been posted to Usenet and other discussion groups, as well as to one of the pro-jammer web pages:

(http://dgk5mvk.tripod.com/Arts_Letter.htm).

Since the text is substantially the same in each case, I'm assuming that the letter from Visser is genuine. I'd like to comment on a few of W9ART's assertions of which I have direct and personal knowledge.

Visser wrote:

> I want to share one other item with you which I believe lends credibility to my
> suggestion that this is nothing more than a 'set-up'. The following is from the
> LIBERTY NET MESSAGE BOARD and is entitled, WILL IT WORK AGAIN?
>
> Posted: 5/2/2000 by Blood Bath McGaff
> Wanted: "Immediate need for affidavit stating that on a date (as yet to be
> determined) KJI was in QSO with ART. Will trade for 3-500's or MD 20/20. More
> as details become available."

The message to which Visser is referring was posted anonymously to the "Liberty Net Message Board"

(http://www.nationlink.com/liberty/wwwboard.html)

as many such anonymous messages are, many by those supporting the jammers of the net in question. However, this message was merely a humorous reference to the infamous "KJI/CXJ Affidavit," implying that ART and KJI would "weasel out" of their current predicament by producing a fraudulent affidavit claiming they were "actually in QSO" during their episodes of intentional interference. It obviously had nothing to do with a "set up" of W9ART. Furthermore, it seems extremely unlikely to me that anyone engineering such a "set up" would have posted a request for assistance on a public message board. Mr. Visser is obviously reaching very far afield to obscure the issue of his malicious interference and other illegal behavior

on amateur radio.

Visser wrote:

> I have NEVER made a death threat to any person

This is a lie. Mr. Visser can be heard stating over and over again over amateur radio that I "should be shot in the head" during one of his jamming sessions which I happened to record and which is archived at:

http://members.xoom.com/kevin_strom/w9art_deaththreat_19991224_0515pmcst.wav

This, you may recall, was the jamming/murder-threat incident which earned Mr. Visser his first warning from you. Mr. Visser has also made other threats of violence over amateur radio. He has also made grossly obscene transmissions as part of his intentional interference campaign, once transmitting the allegation that one of his perceived enemies was a "sperm-burping bitch" repeatedly and unceasingly for over an hour on top of an existing QSO. These are only a tiny fraction of the obscene, illegal, and intolerable acts of Mr. Visser over amateur radio.

Since receiving his first warning, I can confirm that Mr. Visser has continued his illegal intentional interference activities. Mr. Visser often intentionally interferes by pretending to check in to QSOs where he knows his presence is not wanted, even continuing his repeated fake "check-ins" at lengths exceeding several minutes in a sneering, mocking voice which makes it very clear that his intention is to disrupt. An example of this is available in .wav format at:

http://members.xoom.com/kevin_strom/w9art_jammingLN_20000115_0905pmcst.wav

When the phony "check-in" ploy fails, he often makes lengthy insulting commentaries about other amateur operators over top of the stations which he is insulting, in a flagrant violation of the amateur regulations.

Mr. Visser has been a little "slicker" in his jamming sessions since receiving his first warning, but his malicious interference has continued.

Visser wrote:

> The truth
> is that what they are angry about is not my so-called harassment, but the fact
> that I do not agree with them.

That's another outright lie. I'm a rare though occasional participant in the Liberty Net discussions, and I know many of the "regulars" as radio and real world friends, including Mr. Lauterbach.

We don't always agree with each other, for goodness' sake, and we certainly don't try to get licenses pulled of those with whom we disagree. Considering the wide range of views out there, we'd certainly be busy if we tried.

The problem with W9ART is not his views on any subject, about which no one cares very much that I can tell. The problem is his intentional interference which has been going on for years. If you can put a permanent stop to that, all of amateur radio will be permanently in your debt.

With every good wish,

Kevin, WB4AIO.

Hi Fun-seekers.

This Friday and Saturday, June 2-3, is the Atlanta Hamfestival at Jim Miller Park (Cobb Fairgrounds)in Marietta. Look at http://www/saf.com/arc for more details and directions.

Dan Henderson, N1ND, Contest Branch Manager, ARRL HQ, will attend the hamfest for the second year. Dan will check DX cards and give a forum on contesting Saturday morning.

Dan will also attend the regular monthly meeting of the Atlanta Radio Club, Thursday June 1, at their regular meeting place at the American Red cross office in Lindburgh Plaza. Thats at 7:30PM.

Hope to see you at the meeting or the hamfest.

5343. Morse exercises No.25

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-30 00:00:00 UTC
From: DTC - Frank Schmitte <dtc@muenster.de>
Message-ID: <8h185ssd1@news.citykom.de>
Source record: 110129
Cross-posted to: alabama.birmingham.radio.amateur,nl.radio.amateur,rec.radio.amateur.misc,uk.radio.amateur

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr25_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr25_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr25_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

Doc you cannot even prove YOUR claims let alone anyone else's. With all of you posts on here, they've amount to nothing more than liberal rhetoric. NO facts. You spew the liberal line with the fervor of James Carvel. I'm twenty some years younger than you Doc, step aside and make way for the new thinkers. The democratic liberal socialist party has screwed this country up from the control over the house and senate that they managed to have for over 40 years. The economy, balanced budget "law", welfare reform are all because of the Republicans, their ideas and the fact that they have control of both houses. this prosperous economy is the result of Reagan policies and de-regulation. If you try to claim otherwise and take credit for the economy like Klintoon does, then please let us know what Klintoon's economic policy has been. LOL One can only imagine, and it would be a nightmare, what would have taken place had they (republican house and senate) not been there to keep Klintoon in check.
Now go do the right thing. KK7HO

Jeffrey Herman (jeffreyh@Hawaii.Edu) wrote:
: Jeff Pierce <piercej@preferred.com> wrote:
[snip]

: During the 50s when SSB was finding its way into ham radio, there was no
: pub one could turn to to learn about this new mode except the League's SSB
: Manual.

"SSB" by Collins was rather "helpful" :)

We've been through this before and it is just not true. Is this just a
repost of your previous incorrect post? I have many publications on my
shelf printed in the 1950s about SSB and they are NOT by the ARRL.

SSB was done on audio in the 1920s. You really don't think that the ARRL
was the only one to publish information about it up to 1950+ do you?

; Also during that decade the FCC relaxed the regs regarding mobile
: operation - no one else published a mobile manual except the League
: (1955).

Again, this was disproven a few months ago. I have several "manuals"
written by RCA, CQ etc on mobile ham radio. Motorola did do a "little"
work with mobile rigs in the 1950s :)

: To whom could you turn to for the great ideas and techniques that appear
: in the Hints and Kinks booklets?

RCA "Ham Tips" for one. VHF magazine etc etc.

; Propagation and antennas: The Antenna Manual.

This was also covered by other publications.

: Who else in the 60s produced a VHF Manual?

"VHF Handbook" by Bill Orr and Mr. Johnson. "VHF for the Radio Amateur"
by Frank C. Jones are amoung the ones that I have.

; And when that VHF
: crowd began exploring FM: The FM and Repeater Manual. The very first
: book in the 80s devoted to amateur digital comms was the League's Get
: Connected. How in the world
: could you possibly find fault with this business side of the League?

I'm not finding fault, only your posting incorrect facts that they were
the -ONLY- one doing it.

: Publishing affordable technical books was one of the original goals in the
: League's charter; for 85 years they've made information available to the
: layman that was nearly impossible to find elsewhere.

Simply not true. All one had to do was either buy another publishing house's (Cowan for one) books, or suscribe to (or pick up free at your ham radio store) RCA's etc hint booklets. Public libraries have been known to have books on various electrical subjects.

: Every ham shack I've ever visited in the last 30 years has had many
: League pubs on its bookshelves. We are (or at least were) a group with
: a voracious appetite for reading and learning. Luckily, the League has
: been able to feed us what we most desired.

Better look more closely at the titles. Many of them are by people other than the ARRL. (or go to a ham shack that was started BEFORE 1970 if you want to find books from the 1950s!)

: Ham radio and reading are inseparable; and it takes a business to do
: what the League has accomplished.

Yep, and others contributed to the effort also.

I got a VOX headset for an Alinco HT and I want to wire it to my FT-847 PTT.. What I need to know is how to make this thing close the circuit on the PTT connection on the 847...I am sure I must get power to the VOX unit somehow.... The plug on it (for the mic) has three wires.... One goes to the tip, 1 goes to the center ring and the other goes to the shaft....Where does it get its power from? Does the alinco HTs have power on either the ring or the tip of the mic plug??? I have been told that this VOX also works on some icom HTs.... Can anyone give me some advice?

Thanks,
Dan (N4YSV)

> just shows how some can be mis-informed.
>

I clearly recall reading documentation a few years ago which seemed to prove that Hitler's gun ownership laws were actually a RELAXATION of the highly restrictive gun ownership laws of the Weimar Republic which were in force prior to the Nazis' elections to office. If I remember correctly, Hitler allowed citizens of German blood, which were not criminals, etc., to own guns.

And, NO, I am not in posession of the documentation in question. All I can tell you is it seemed to be authentic when I saw it.

Given all the emotion, propoganda, and downright lies that have been involved in WW2 history, especially when it comes to Hitler, it's hard to know what to believe sometimes.

May 9, 2000

Mr. W. Riley Hollingsworth
Special Counsel
Amateur Radio Enforcement Bureau
FEDERAL COMMUNICATIONS COMMISSION
Gettysburg, PA 17325-7245

Dear Mr. Hollingsworth

RE: Amateur Radio Station W9ART

Mr. William E. Lauterbach, Jr., WA8MEA has stated the alleged incident he is complaining about occurred on Saturday, March 18, 2000. You, Mr. Hollingsworth, stated on April 30, 2000 and again on May 7, 2000 in the Rain Report that the alleged incident occurred on March 8, 2000. So I ask you, what is the date this incident allegedly took place? Was it on Wednesday, March 8, 2000 or was it on Saturday, March 18, 2000?

Lets give Mr. Lauterbach the benefit of the doubt here and call it March 18, 2000. For purposes of clarity, let's place all the dates in chronological order. On March 18, 2000 I allegedly interfered with a conversation between Mr. Lauterbach, Mr. Michael DeWoody (N3GVA) and Mr. Mel Richardson (W8KBK). On April 19, 2000 Mr. Lauterbach signed his affidavit of complaint and on April 26, 2000 you Mr. Hollingsworth, sent me your letter and the affidavit. I received this mail on Monday, May 1, 2000 as your certified mail signature will bear out. OK. From March 18, 2000 to May 1, 2000 I am now being asked to recall the specifics of the evening in question. A fairly tall order as this time span is over six (6) weeks long. I'll be honest with you - I doubt I could recall details and specifics from a casual conversation I had yesterday let alone six weks ago! And frankly, Mr. Hollingsworth, I'm not sure you could do this either. But I believe if we look at the entire picture here of exactly what is happening with this affidavit, we will see that there is something much more cynical going on than just a complaint about interference.

Don't you find it a bit strange that Mr. Lauterbach took 32 days to file this complaint of interference against me? Now I wonder why he did that? Why did he take so long to file a complaint? If I felt my rights had been violated - I can guarantee I would not take over a month to say so - to write my letter to you. I would file my complaint IMMEDIATELY - while the details of that complaint were still fresh and true in my mind. I wonder what the police would do if a store owner tried to file a complaint of theft from their store on month after the fact? Why do I imagine they would scratch their heads and say, 'ok, now

what's really going on here?'

Let me try and substantiate what I believe is really happening here. At this time I would like to direct your attention to an enclosure I have attached. It is an article written in THE IDAHO OBSERVER, a white supremacist publication and dated September, 1998. The title of the article is "THE LIBERTY NET" SAGA and was authored by Bill Lauterbach. Mr. Lauterbach states I have had congressmen in touch with me, that I have issued death threats to Liberty Net members and that I have threatened federal agents.

Page Two
Mr. Hollingsworth
RE: W9ART Station

I have NEVER heard from my congressman on any issue let alone on 'jamming' or 'harassment' on 3.950 MHz LSB, I have NEVER made a death threat to any person, and I have NEVER threatened a federal agent! These statements by Mr. Lauterbach are reprehensible and are made with the sole purpose of damaging my character. They are malicious and they are slanderous. Isn't slander against the law? The only time I have even met a federal agent was on Spetember (sic) 9, 1998. Agent Harness came to my home to inspect my radio station. We actually had a nice visit and Agent Harness left my home on perfectly good terms with me.

Mr. Hollingsworth, as inane as this attachment may seem to you, it is important to me that you take it seriously. I sent it because I believe it lends itself to my suggestion that Mr. Bill Lauterbach's charges are not credible. He has been saying for a couple years now that in the end, he would 'get my radio license'. That he would do whatever he had to do to remove me from the airwaves! He has said this on 3.950 MHz many times. Whatever he had to do! I believe that is why he waited over a month to file the charges of interference against me - he knew full well there is no way in the world I would be able to recall the details of the evening! Isn't there a time limit a person has to file a complaint?

I want to share one other item with you which I believe lends credibility to my suggestion that this is nothing more than a 'set-up'. The following is from the LIBERTY NET MESSAGE BOARD and is entitled, WILL IT WORK AGAIN?

Posted: 5/2/2000 by Blood Bath McGaff
Wanted: "Immediate need for affidavit stating that on a date (as yet to be determined) KJI was in QSO with ART. Will trade for 3-500's or MD 20/20. More as details become available."
Reply: 5/4/2000 by Ratfink
Do the 3-500's work? Full output?
And Deja.news reports on 5/6/2000: author: BurkSWL:
Castle and Visser have been nabbed this time. A sworn affidavit corroborated by witnesses and two tape recordings from two different locations will either land up in their punishment, or prove Riley to be a Clinton puppet.
And YCTHULHU replied to this entry: Yep, one wonders how Riley gets around in public dragging all those strings behind him.

Now, Mr. Hollingsworth, don't you find it strange indeed that on May 6, 2000, just 4 days after an offer of bribery is made, suddely 'proof' of this evening appears? Guess the donor didn't want the MD 20/20.

I am to understand Bill Lauterbach has had attorneys working for him on Liberty Net problems for many years. Too bad Mr. Lauterbach didn't have an attorney to edit his article in THE IDAHO OBSERVER. He should have. Any good Attorney would have told him what a mistake slander is. And any good attorney would have also told him to omit the comments he made suggesting 'when the federal system doesn't work for you, justice lies in your own hands - the hands of the Liberty Netters.' Now that sounds like a statement meant to incite and meant to break the law to me.

Mr. Hollingsworth, you have mentioned in your letter that my 'harassment' violates the rights of the Liberty Net. What about my rights? What happened to them? My occasional comment has been to call the Liberty Net the 'Great Liberty Nitwit Net'. The Liberty Netters are incensed by this remark, but so what? This comment is not profanity and it happens to be my opinion. I have also called the Liberty Net members white supremacists. But this comment they like - they are proud of this. As a matter of fact, one of the Liberty Net members brags about the fact that he holds a higher-up position in the KuKluxKlan. The truth is that what they are angry about is not my so-called harassment, but the fact that I do not agree with them. And even the Liberty Net members would concede that they could not 'get my license' with the reasoning that I do not agree with their beliefs.

Some of the Liberty Net members have recently made mention of the fact that for the last several months, the 'friendlies' have turned over the frequency to them for their Saturday night net. And you, Mr. Hollingsworth, mentioned that even with the monitoring of 75 meters by the FCC, I have not been found to be interfering or jamming the frequency. Well, I have not been interfering with the Liberty Net licensees. In fact, I am only occasionally on the frequency any more at all.

Mr. Bill Lauterbach is persistent in his efforts to 'get my license any way he has to'. I do not believe Mr. Lauterbach has filed an honest complaint against me. And I believe the enclosure as well as my letter of explanation will corroborate this statement.

Sincerely,

Arthur D. Visser
W9ART

Enclosure

As much as I disagree with AF2Y's position on gun control, it is
important
to get actual facts straight if you're going to cite them. I'm as
guilty
as anyone of repeating "common knowledge" but when challenged on the
factuality I will do my homework. It can be enlightening, as you will
see.

Take a look at http://www.rkba.org/research/rkba.faq, APPENDIX VI.
"Pious Frauds: Or, If It Sounds Too Good To Be True...". Keep in mind
that RKBA is very much in the fight to preserve our contitutional
rights,
but they also know the value of truth.

This doesn't even begin to change my position, but I don't think I'll
be citing Hitler and gun control in the future to support my arguments.

Jim, N4SVZ

The Nazi Weapons Law Of 1938 introduced handgun control, firearm ownership was returned to the Nazi party members. If you knew so much you would have not shown your ignorance on the issue. the law itself was signed by Nazi Interior minister, Wilhelm Frick. FACT: Hitlers Nazi style of " Political Correctness", caused the genocide of 13 million people of which 6 million were jewish. This key element of his platform was called "The Final Solution". Disarming citizens was a key stradegy in his success.

It doesn't matter. Doc would claim that it's all a lie anyway. I too have seen it a few times, and yes, once was in reference to the damn Brady bill and the similarities it had to nazi Germany's gun law under Hitler.
I will research it. I want to know!
Ps. Doc, ol man, I would never throw my "weapons" in lake Mead, they may be needed for protection some day.
Remember when Nazi Germany waved the fist of invasion at the English during the ninteenth thirties, an anguished plea for help went out and America sent thousands of sporting and surplus military arms to our British bretheren.

Good call, Al. Nice to see someone who remembers LBJ's "great society". That "program" has cost taxpayers nearly 4 trillion dollars since its beginning. As a "war on poverty", it's been a joke. But it achieved Johnson's objective. The give-away programs were successful in buying democrat votes galore.

Remember the Jesse Helms editorials on WRAL-TV (or was it WTVD?) in the mid-60's? I think it was his "observations" on "the great society" programs that got him elected in the first place.

5371. Auto-FAQ Sent to Over 17,500 rec.radio.amateur.misc Posters

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-30 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <6AIY4.40660$if.316566@newscene.newscene.com>
Source record: 110178

In September of 1996, I started mailing an introductory message to all posters to rec.radio.amateur.misc. This is accomplished via a special Perl script originally written by comp.infosystems.www.* FAQ maintainer Tom Boutell, who uses it on comp.infosystems.www.authoring.html, to send each poster such a letter once, and only once. It runs from a Unix cron job on my host every morning at 2 AM and queries my local news server via NNTP for the headers of any new articles posted to this newsgroup. About 15-25 new posters on average receive the message each day. Though substantially silent-running and low-maintenance, over those three years, the script suffered from two minor "oops" events:

1. Some as-yet undetermined file write error (possibly from a quota hard-limit on the system) truncated my previous-poster file to zero, and accidentally sent the message twice to a small number of recipients (essentially the posters of articles to rec.radio.amateur.misc in my local news spool on Friday, February 19, 1999).

2. A bug in Version 1.2.1 of the Typhon news server (installed by my ISP on or about April 3, 1999) which caused "References" instead of "Reply-To" headers to be returned when requested by the script using NNTP protocol, thus addressing the automated welcome messages to Message-ID contents. This mildly annoyed one postmaster who redirected to his mailbox all E-mail addressed to his domain, but with invalid mailboxes (e.g., the numeric, pseudo "addresses" used for Usenet article Message-ID headers).

In both cases, the problem was easily diagnosed, fixed, and enhancements were made to the script to ensure that the problem would not happen again.

Here are the milestones in terms of number of recipients, and the date each milestone was attained:

Recipients: Date: Average Recipients/Month (approx.):

0 September 21, 1996 N/A
5,000 July 5, 1997 625
7,500 December 7, 1997 500
10,000 June 2, 1998 420
12,500 December 20, 1998 420
15,000 September 29, 1999 280
17,500 May 30, 2000 310

Note that the rate is tapering off (likely following an exponential saturation curve).

Here's a breakdown of recipient's reactions to the letter over the last 45 months. All feedback was politely replied to, usually with a version of the rebuttal arguments given below:

About half of one percent of all recipients strongly objected to it. Spamming and junk mail seems to have rubbed sensibilities raw with regard to receiving unsolicited, possibly automatically-sent, E-mail; also, there's obviously just no pleasing some recipients, including the one person who angrily replied that he did not ask to be welcomed to this newsgroup (sigh!). Two others (out of the 17,500 recipients), accused me of illegal "spam" and threatened to have my account, my ISP, and possibly my ISP's upstream connection if necessary, "permanently removed from the Internet." Since this didn't happen, I can only assume that these threats were disingenuous (Hint: If there truly is a problem, please let me know about it, but I cannot constructively respond to misrepresentations, insults, and threats). I choose to endure this occasional abuse because experiences in other newsgroups demonstrate such automated welcome messages to be "just barely redeeming" in terms of dealing with the massive influx of new users.

Another half of one percent thought it was a bit wordy (the message needs to be "one size fits all" and some recipients might be very confused without some background explanation; the message attempts to get to the point as quickly as possible, and some careful pruning and rewording of the message has helped reduce complaints, but pragmatically the message is also optimized to minimize the amount of followup correspondence I have to engage in)

A handful of recipients complained that they did not post to the newsgroup (they did, usually by following up to a crossposted article in another newsgroup). In this case, the message was at least useful to warn users about such unintended crossposting. An increasing number of cross-posts (leading to followup postings) among rec.radio.amateur.misc, rec.radio.amateur.equipment, and rec.radio.swap seems to be causing a few more incidents of this type recently.

A handful of recipients didn't read the entire message, or didn't understand it, and asked to be taken off the mailing list (of course, this isn't a mailing list, and removing their address from my database would have the opposite of the desired effect). Two people even asked to be removed from the database anyway, each stating that they never intended to post to the newsgroup again (I honored their unusual requests).

A handful of recipients pointed out that they had been participating on the newsgroup for many years (It's possible that if you haven't posted in the last 45 months, or posted but the article didn't reach my local news spool, that you could potentially get this new user welcome message the next time you post. However, you will certainly not get it more than once.)

About one percent complimented me for sending it (which I appreciate).

The overwhelming majority did not respond, indicating one of several possibilities:

- they approve of it
- they disapprove, but not enough to bother replying
- the mail was misdelivered (I got a few bounces, often from deliberately munged From: or Reply-To: addresses to ward off "spam"; I've also recently begun to notice a number of readers registering with blocking or filtering services provided by DejaNews and others that prevent them from receiving reply E-mail)
- they don't care

So, my impression is that the project is at least a qualified success, and should continue in its present form. At the very least, it seems to be substantially non-controversial. Having primed the previous-poster database with over 17,500 E-mail addresses, the chances of bothering an experienced reader with an unneeded introductory message is greatly reduced, and will get even smaller with time.

I'd be interested in hearing your opinions on this project. I'd also like to solicit volunteers to initiate similar projects in some of the special-topic newsgroups (perhaps starting with my previous-poster database as a baseline, and modifying the message to contain pointers to the more topic-specific FAQ's and information; the .digital.misc, .homebrew, .equipment, and .policy newsgroups seem to be good candidates for a project of this type).

For those who are curious, here is the current version of the message, slightly modified in response to feedback as the project progressed.

Subject: WELCOME to rec.radio.amateur.misc
Newsgroups: rec.radio.amateur.misc
X-Loop: rec.radio.amateur.misc-auto-faq@oasis.novia.net

Hello,

This E-mail message is automatically sent to every new poster or cross-poster (as of September 21, 1996) to rec.radio.amateur.misc (and its associated mailing list, Info-Hams). It should be sent once, and only once, to each unique E-mail address. As the subject says, this is a welcome message. The Internet amateur radio community welcomes you to the newsgroups, including rec.radio.amateur.misc, and welcomes your input, opinions, and constructive participation. To help make you feel welcome, experienced participants like myself have chosen to systematically inform you, as a new poster, about useful information resources and user tips to help you get the most out of these newsgroups. I hope that you will consider this message in that spirit.

Please note that this is a one-time mailing, not a mailing list, and the presence of your E-mail address in my database prevents you from getting the message again the next time you post. Because of this, a request to "take me off of your mailing list" would not only not make sense, removing your address from my database would actually have the opposite of the desired effect (where you would be considered a first-time poster

the next time you posted, and get the message again).

* * *

1. The news.announce.newusers newsgroup, moderated by Mark Moraes, contains a number of very informative articles providing an overview of net-etiquette, suggested writing styles for electronic forums, and other various do's and don'ts concerning Internet culture. If the articles have expired at your site, you may also view them via your World-Wide Web (WWW) browser (such as Netscape, Mosaic, Lynx, or Internet Explorer) at:

ftp://rtfm.mit.edu/pub/usenet/news.answers/news/

2. The Amateur Radio Frequently Asked Questions (FAQ) List, formerly maintained by Diana Carlson, KC1SP and Ian Kluft, KO6YQ, has recently been resurrected by John Seney, WD1V. The majority of the original content of the FAQ remains the same, but now it's a hypertext document with hundreds of links to radio-related sites and is a significant resource to all students of amateur radio - regardless of their license status. It may be accessed as a WWW Page:

http://24.147.93.142/hamfaq/index2.html

It is also available in text form. Send an message to John's E-mail address below with the words "HAM FAQ" on the subject line.

Please direct any submissions, feedback, or administrivia regarding the FAQ to wd1v@amsat.org.

3. The Amateur Radio Elmers Resource Directory is an excellent supplement to the FAQ as it's a directory of "Elmers" (mentors, experts, and gurus) for amateur radio who can answer questions via Internet E-mail and via the various resources (such as special-topic FAQ Lists and WWW pages) that they maintain. It is accessible both as a WWW page:

http://www.novia.net/~pschleck/elmers/

and as flat text files:

ftp://ftp.novia.net/customers/pschleck/elmers/

Please direct any submissions, feedback, or administrivia regarding the Amateur Radio Elmers Resource Directory to elmers-request@novia.net.

4. The Guide to the rec.radio Newsgroups, originally written by Jay Maynard, K5ZC, is now maintained by Jeffrey Herman, KH6O. It provides an excellent overview of all of the USENET newsgroups devoted to amateur and CB radio. It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro

5. The rec.radio.swap FAQ: A Guide to Buying and Selling on Usenet, also originally written by Jay Maynard, K5ZC, is now also maintained by Jeffrey Herman, KH6O. It contains a number of good pointers for reading

and posting articles concerning the buying and selling of radio and radio-related equipment on the USENET newsgroup rec.radio.swap (which, with the sole exception of rec.radio.amateur.boatanchors for vintage equipment, is the only appropriate forum for such articles). It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/swap-guide

Please direct any submissions feedback, or administrivia regarding the above two resources to jeffreyh@hawaii.edu.

6. The national amateur radio society of the United States, the American Radio Relay League, has a presence on the Internet. You may access their comprehensive and informative home page at:

http://www.arrl.org/

or their automated file server by sending a message with the word "help" to:

info@arrl.org

(They also have information about amateur radio organizations in other countries.)

7. Read the newsgroup first to see if your question has already been answered. You may also view, and search for keywords in, older news articles (going back to March of 1995) at the DejaNews archive:

http://www.deja.com/usenet/

Many topics have been discussed before, often in great depth, but the articles have expired from your local news server. Services like DejaNews allow Usenet a much longer "institutional memory" that can greatly benefit both new and experienced users.

8. If you do post to the newsgroup, give as many details as possible. After you post, read the newsgroup for a week or two to see all replies to your posting. If you wish, ask for responses by E-mail and offer to post a summary if others are interested in the answer to your question. Note that it is (almost without exception) inappropriate to post your article to all (or even a significant subset of) rec.radio.amateur.* newsgroups. Please pick only the most relevant newsgroups (usually no more than 2 or 3), and post your article as a simultaneous cross-post (check your newsreader documentation) so that only one article is propagated, and the article is only shown once in a newsreader.

9. Remember, USENET newsgroups are based on the idea of mutual aid. USENET only works if we put as much into it as we get out of it. Good luck with your experiences with amateur radio and the amateur-radio-related USENET newsgroups.

73, Paul W. Schleck, K3FU

> Thank goodness we can shut it off.

Jack, it sounds like a button is stuck, which would cause the computer not to "see" other buttons being pushed. Try working all the buttons (push, wiggle side-to-side, etc.). After you've gave all the buttons a good workout, try the radio again.

If it still doesn't work, perhaps a more serious problem does exist. Try turning on the radio as you press various combinations of buttons. Perhaps you'll hit on the correct reset sequence by accident.

Of course, you could call Ford, but they probably won't be of much help - many car makers are placing third-party products in vehicles and really have no idea how they actually work.

Sorry I could not be of more help. I looked at the owners manual for the radio in my Explorer, and it says nothing about a reset option. But that does not mean for a moment that it does not exist.

Good luck.

Paul, I consider myself a right-wing conservative, so you'll have to ask someone else - my opinions might be a little biased.

> Why is this problem over about individuals carrying guns (as
> individuals), when (as I understand it) they can carry them as part
> of an organised militia.

Well, in general, liberals tend to argue that we no longer have an organized militia in this country (the National Guard serves that purpose today), so there is no longer any reason for the blanket allowance of gun ownership by the average citizen.

However, conservatives argue that the 2nd Amendment of the American Constitution gave only one example of a reason for the citizens to own weapons (a militia) - but that was not the sole reason for gun ownership. They point out that using a gun for hunting and self-protection were commonplace at the time, so the writers of the Constitution saw no reason to add those reasons to the document (those were obvious).

Of course, the debate would have ended years ago if it was as easy as the last two paragraphs suggest. But, there are many arguments on both sides of the debate, so the debate goes on.

5378. HT as a Scanner

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-31 00:00:00 UTC
From: Gary Schiltz <gschiltz@biosgroup.com>
Message-ID: <3934BE2C.CEE4DBC3@biosgroup.com>
Source record: 109935
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc

I would appreciate any comments on using an HT as a scanner for police and fire bands. I have been doing HF for a little over 10 years, but have not until recently gotten interested in VHF or UHF. With the fires here in northern New Mexico lately, I'm getting interested in keeping in touch with other local hams and participating in emergency service. So, in the interest of saving some money, I wonder if an HT with fairly wide range VHF/UHF coverage would be adequate for my needs. I'd rather spend more on a great dual-band HT than on a mediocre HT and a mediocre scanner. I'll be checking with the local fire services to see if they use trunking (which I assume that HTs don't have), but I don't think they do. Many thanks in advance, and all the best from Pecos, NM!

Sure a wide band HT will work. Yaesu makes some very wide ones but my
Standard an Icom units work fine. Only problem with HTs is that most
emergency services are trunking now and it's doubtful any HTs will
cover 800 mhz. Even if it does, while you can listen in, you can't
follow any trunked QSOs.
Also while many HTs have some memory scanning capabilities, they don't
scan as fast as most dedicated scanners. On the positive side if you're
in a metropolitan area, most HTs have CTCSS tone capabilities which is
rare in hand held scanners except the very expensive ones. But hey, if
you are planning on monitoring one or two untrunked frequencies,the HT
works great.

That is the number of hams that ARRL directly is
told about through one source or another. That does
not probably reflect the 3/4 of the ham population
that are not ARRL members and many ARRL members probably
are not known to ARRL when they become SK other
that when their membership is not renewed.

>Considering that the current US ham population is several

Actually Weaver's son (Sam) was killed also but the militia-types
don't mention the fact that Randy Weaver himself now says in
retrospect he should *never* have gotten involved in illegal
activities in the first place. Also it was the FBI not the BATF that
was involved in the shootings. Actually this is one of the few times
(surprisingly ??) that Bill Clinton and Janet Reno didn't get blamed
for Ruby Ridge.

Al Gore would be a joke if he wasn't dangerous, given some power to enact some of his loony ideas. He and Prez Clinton use the principle "The end justifies the means" which is destructive to any democratic process, aside from being outright disgusting.
George Bush, on the other hand is an absolute crook. People seem to have forgotten how he walked off with the money while we bailed out the S & L's. Dad helped him with that setup. Actually I can't remember a single presidential election where the people didn't have to choose between the two worst candidates, clear back to the time of Eisenhower. Many folks don't even bother to vote. Its "six of one and a half dozen of the other" outcome.
Gary Bauer was probably our best offer as a leader for this country. He was one of the first to fall in the primaries, as are most of the good ones. He opposed abortion, queers and Chinese campaign 'contributions', which seems to be what most Americans really want the most, it the poles tell us anything.
Christianity was the basis for the founding of the country. It is the absolute truth that set the processes for the rights, liberty and justice that were sought, in govening this people. Keeping Christianity out of govenment has the same result as keeping it out of the schools. (I say Christianity, rather than religion, because acknowleging "God" can be anything from Budha to a dollar bill.)
What we have in almost all churches in the USA is religion. It apalled Jesus and it apalls a lot of us. Martin Luther brought us out of the Catholic relighion as a 'protestor', leading the Protestant movement. Mankind has found ways to re-interpret the Word to take us back into the same kind of relgion that we left.
Its kind of like Bill, changing the meaning of 'IS.'
I belive the downfall of the USA was written in the beginning, with the 2 party system. Both have become so corrupt, they are hard to distinguish between the two and the independents don't stand a chance against their power. Too bad. I suppose it really doensn't matter; it seems the American people have become as corrupt and un-principled as their polititians. "Give me a dollar, and I'll vote for him." It doesn' matter to the people whether he is a murderer, a queer, a liar and a crook, just make sure I get something out of it when he gets into office. No wonder the world hates Americans. We don't have many qualities to admire anymore. JJ

In short, WHO CARES. Let the ignorant, self-centered, egotistical basterds all go away so I don't have to hear about how great HAM was in 1960 one more damn time. I think they are a joke, cops think they are a joke, most local authorities (In real cities not shit towns) think they are a joke, anyone under the age of 30 thinks they are a joke, they are the only ones who seem to take themselves (way too) seriously. BYE, bye and good riddance.

Mr Finn,
You may be right on target because I notice that when SAGGY gets going, he does nothing but sits before the mic and dishes out similes, metaphors, hyperbole, euphemisms and eunuchisms in order to impress Mike, Mean Gene and other simpletons pretending literacy.
More often than not after the Hicksvillian gets off his soapbox, I ask myself, "What in the world did he say for the past 20 minutes?" Our pal Al goes way beyond doubletalking but he still had rotten things to say about New York's Senator who'll replace Daniel Patrick Moynihan, Hillary Cinton. Parker had no right to attack her feminity and sexual preference because I'm sure she's just fine on both counts.
In politics it's issues that count, not rightwing slander and all I know is the other day while touring, Rick Lazio fell on his face and needed 10 stitches to stop the bleeding between his nose and lip. He reminds me of another dumb Republican named Gerald Ford who always kept bunking into things, especially doors to planes.
How will New Yorkers feel if Lazio wins and before every vote winds up missing and in the hospital having one thing at a time stitched up? Damn anyway, the guy will known as Senator Zipper.
Last night was the first time I tuned to 3.950 and it's the same old sugar regarding what's wrong with America and how those birdbrains are going to fix her. Our founding fathers must be turning over in their graves on hearing how SAGGY and his pals abuse something called Freedom of Speech.

Gary,
Sure, I use my ADI AT-600 as a dual purpose unit, only real fault as far as I'm concerned is a rather slow scan speed. And several months ago one of the scanner mags, Monitoring Times or Popular Comm., had an article on using a W32A as a scanning receiver. There are trade-offs. Slow scanning speed, no trunking (may or may not be a problem), and the lack of really adequate priority channels. When activity really starts to hop, I go ahead and add a handheld scanner to the mix, earphone in each ear. I used to be a police dispatcher, so I'm used to listening to multiple radios at the same time. The AT-600 can be found as a refurbished unit w/ warranty at the ADI/Premier site for $199. Also get the so-called gift package for $99 which includes a HP NiMH battery, a LP NiCad battery, drop-in fast charger, and auto pwr cord. http://www.adi-radio.com/

5411. Re: Dayton Fleamarket

Newsgroup: rec.radio.amateur.misc
Date: 2000-05-31 00:00:00 UTC
From: tswisher@gcfn.org
Message-ID: <8h3karrik1@acme.gcfn.org>
Source record: 109968
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

Some flea vendors really need to get a grip on reality; a few years ago, one fellow was asking $100 for an old AF signal generator that would not fetch half that at a "normal" sale, and to make matters worse, this unit had been drenched in the Friday morning downpour, as well as submerged in a river that flowed across it from the higher points of the flea market area. This fellow obviously didn't have a very good grasp of reality in this instance, and did not sell his sig gen, as I found it lying next to a trash can on Sunday (and I did not take it home, I've got too much stuff already).

As far as the commercial 2-way dealers, they are specifically in this thing to make money. They are going to charge the highest price they think they can get away with, and the sad part is that sooner or later they will succeed in selling that beat-up piece of junk to some poor sap who doesn't know any better.

The average ham who gets a space, however, is trying to get rid of stuff he no longer needs or wants. While the price he is asking might be a little high, haggle with the guy. He's trying to clean out his shack, and certainly doesn't want to haul the thing home, so you may be surprised at your success.

On the other hand, you have to go into the flea market (especially Dayton) with realistic expectations. After many years of attending Dayton, I always go into the flea expecting to see beat up junk being sold for outrageous prices. That way, I'm pleased and surprised when I find something nice for a good price. A couple of examples from the 2000 Hamvention:

1. The new $10 DMMs complete with rubber shock holster. If it only lasts a year or so before conking out, it still only cost me $10....

2. The two nice, clean Kenwood TS-700A 2m all-mode transceivers which I got for $175. The seller was quite honest that they had problems, even elaborated on said problems, and threw in the service notes from the Kenwood FTP site. One needed a new 9v regulator, and the other had no TX.

I found later that the one with no TX had a loose VOX plug, thus keeping the internal jumper from making contact. Cleaned it and tightened it, and it now works 100%. I've also replaced the 9v regulator in the other unit, and it too now works 100%.

So there *are* great deals in the flea market at Dayton; you just have to go into the thing with realistic expectations, a good idea of what you are looking for, and some research under your belt into what the item you're looking for is currently fetching on the used market. You also have to look carefully; don't rush through the thing! Finally, don't be

afraid to haggle; most vendors will gladly haggle over the price,
so you will very likely be able to knock some bucks off the price.

"Pitbull," the newsgroup's Chihuahua, tries to make up for his
inadequacies by posting under an alias. This shows his maturity
level is that of an 12 or 13-year-old. "Pitbull" suffers from
paranoid schizophrenia, and must have had a tormented childhood,
beiong sodomized by his father and mother like that. You have to
kind of feel sorry for him, he's looking for a "father" or role
model, so naturally, he picks those types he wishes he could be
like the most to attack on the newsgroup.
He really should send his wits out to be sharpened, but you
can't sharpen a pencil stub.

Please be on the lookout for these military radios
stolen from Robert Downs,
"ROBERT W. DOWNS" <RWDowns_WA5CAB@compuserve.com>
Of Houston, Texas. Thanks!

Groups,

The following items were stolen from my storage building the night of
29/30
May 2000. If any of you see or hear of anything, including someone who
suddenly has a complete SCR-284 packset radio, please let me know. The
Houston Police Dept. Incident Number is 68850900-D.

SCR-284 packset radio consisting of:

BC-654 Receiver-Transmitter s/n 47775 with J-48 key and PE-104 Vibrator
Supply s/n 52186.

CS-41 Bag containing GN-45-A Generator s/n 10214

BG-58-A Roll (Bag) containing:
2 GC-7 Crank
LG-2-A Leg
2 LG-3 Leg
4 LG-13-A Leg
IN-106-A Insulator
MS-49 through MS-56 Mast Sections plus extra MS-49 and MS-50
15' W-142 Wire

BG-102-A Bag containing:
P-19 & HS-30 Headset
CD-501 Cord
RL-29 Reel with CP-12 & -13 Counterpoise
RL-28 Reel with GY-11 & -12 Guy
T-17-D Microphone Contract # 10612-Phila-44
4 GP-27 Stake
2 PE-104 Vibrator Supply s/n 12424 & 4431

CS-76-B Bag containing RM-29-A Remote Control s/n 2504
BX-31-A Box, Spare Tube & Vibrator (fully stocked)

SCR-694 and AN/GRC-9 components:

CW-140/GRC-9 Bag containing RT-77A/GRC-9 Receiver-Transmitter s/n 4726
(all
3 tags match)

BG-175 Bag

2 BG-174 Roll (Bag) (one WW-II and one Korean War style) each
containing:
6 MS-116-A Mast Section
2 MS-117-A Mast Section
2 MS-118-A Mast Section (missing from WW-II bag)
CD-1086 84" Cord
2 GC-7 Crank
IN-127 Insulator
LG-2-B Leg
2 LG-3 (WW-II) or 2 LG-3-B Leg
1 GP-27-A (WW-II) or 4 GP-27-Fr

For the four of you who noticed that there are three PE-104's with the
SCR-284, the two in the BG-102 are filling the space that should be
occupied by two BA-43 Batteries, which are made of unobtanium.

Windy, how can Al Jones whom I knew from 75 meters, be living in Indiana and New York state at the same time and why does he have an alias of Luis Delgadillo?

On 75 Al used a Hertz. It was a sloping 65' wire with one end on his tower and the other tied off to a ground rod. He end fed it and the braid of the coax was connected to four 65' radials. I used to hear him work ZLs I couldn't hear between 6-7 A.M. I think Bill Salerno, W2ONV from Saddle Brook, NJ. used a similar setup. Bill's signal was so strong, a woman sued him for coming through her fillings and that's the truth.
Her saliva acted as an electrolyte and the amalgam fillings as a rectifier and she'd hear him loud and clear but never asked for a QSL. There was an article in our local paper about her bringing him to court.

Incidentally when I knew Al Jones, he was living along the Jersey shore which certainly did not impede his bodacious signal. How could an erudite gent like he relocate to a god forsaken hole like Indiana? Ugh!

Your German is terrible. First off there's no such word as Kurpfuscher but
if you insist upon using it in a sentence meaning "one wrote," it is not
"Ein Kurpfuscher (AF2Y) geschrieben," but instead "Ein Kurpfuscher(AF2Y) hat
geschrieben," but a better way to say it would be "Schrieb ein
Kurpfuscher(AF2Y)." In other words if you don't know foreign language
grammar, stick to English but then again that's not your strong point
either.

To the "gentleman" who just disparaged Pres. Clinton, I have news for you. His influenece in the recent normalization of trade with China bill which should be passed by the Senate despite a moron like Jesse Helms will prove to be one of the most important pieces of INTELLIGENT legislation to ever come down from Capitol Hill. Why?
BECAUSE IT'S ALL ABOUT OIL! That's right, OIL. Forget the rest of the stuff you've heard about what China will give us and vice versa---that country has GREATER oil reserves than all the OPECKERS combined!
The standard networks don't talk about it and neither do the WWCR and Genesis Network crowd but I got wind of it from my cousin Sidney who's a spy and that's the REAL REASON why we have cozied up to Red China and if Taiwan doesn't like it, that's too bad because that place is just an island which is a nothing.
As a way of saying thanks to Clinton, the Chinese Prime Minister "Red Fat Hung" will allow us to go in there and DRILL and buy at prices much much lower than that of OPEC's. It will have a fantastic effect on our economy which President Al Gore will exploit to the fullest.
And youse guys are so concerned with ham radio and the ARRL? As far as I'm concerned, the ARRL SOLD US OUT-it's as plain and simple as that and I ended my membership until the dues drop to $14.95/year. My suggestion is THINK CHINA! Visit Chinese restaurants more often. Overdose on MSG. Bring in more shirts. Throw out your silverware and buy chopsticks.
The sleeping giant in the far east will awaken with our help and emerge as the major global power in the 21st century and if you think she's going to nuke us, you're nuts. Once she sees all those Yankee greenbacks pouring into her economy and all the coolies going from pulling rickshaws to driving BMWs, her oil will drive that OPEC scam out of business. In fact the Israelis will sense a good deal and offer to buy their crude for $3 a barrel.
Oy vey what a day it'll be when China influences America so much that our school kids will learn to read "My Dog Spot" from top to bottom instead of from left to right.
There's a Chinaman in Clifton who went to jail for constantly peking into windows.

> <ARRL> now caters to the equipment manufacturers for advertising dollars.

According to the ARRL's annual reports, the advertising revenues are a distant third to dues and publications sales. In the June issue of QST, less than half of the ad space was for actual manufacturers.

Can you offer some examples of actions that ARRL has taken that you feel have been to the benefit of equipment manufacturers without being a benefit to Amateur Radio.

> My view is that it is a now a publishing house that also lobby's for it's
> publishing's area of interest on the side.

Can you explain where you believe this "lobbying" takes place? I didn't see anything in any FCC filing that lobbied for ARRL publications.

Please take a look at the results of a search of the ARRL TIS database at:

http://www.arrl.org/cgi-bin/tisfind?case=on&patt=PUBLICATION%3eBOOK

then explain how a monopoly can have so much competition. And ARRL is even
promoting those companies by including them in its database.

>"SSB" by Collins was rather "helpful" :)

So were QST articles on SSB back in the 20s, way before Collins' time.

>We've been through this before and it is just not true. Is this just a
>repost of your previous incorrect post? I have many publications on my
>shelf printed in the 1950s about SSB and they are NOT by the ARRL.

Year printed? Number of hams who hold copies? Were they written for
amateurs or professionals? Again, QST is a publication -- the articles
contained in it on any topic appeared before any author penned an
amateur-related book on that subject.

>SSB was done on audio in the 1920s.

The phone company did it earlier than that.

>You really don't think that the ARRL
>was the only one to publish information about it up to 1950+ do you?

For amateurs? I'd say so. But again, SSB articles appeared as early
as the 20s in QST, a League publication.

>; Also during that decade the FCC relaxed the regs regarding mobile
>: operation - no one else published a mobile manual except the League
>: (1955).

>Again, this was disproven a few months ago. I have several "manuals"
>written by RCA, CQ etc on mobile ham radio. Motorola did do a "little"
>work with mobile rigs in the 1950s :)

That would be interesting that CQ published a mobile manual before
mobile operation was made legal! What's its date of publication?

RCA ham tips? Those are 6-8 page booklets; not much can be contained
in six pages. Motorola's publications were not for the typical ham.
Mobile work for non-amateurs was being done as early that the 20s.

>: To whom could you turn to for the great ideas and techniques that appear
>: in the Hints and Kinks booklets?

>RCA "Ham Tips" for one.

Six pages.

>VHF magazine etc etc.

Completely devoted to hints and kinks? Nope. Yet QST goes back to 1915; that beats RCA, CQ, VHF, et al.

>; Propagation and antennas: The Antenna Manual.

>This was also covered by other publications.

I didn't say no other antenna pubs existed. But of all which were published, there is little doubt which was the most popular. Yet antenna and propagation articles in QST pre-date any other ham-related publication.

>: Who else in the 60s produced a VHF Manual?

>"VHF Handbook" by Bill Orr and Mr. Johnson. "VHF for the Radio Amateur"
>by Frank C. Jones are amoung the ones that I have.

Yes, I also have Orr's book, but there is little doubt which was the most popular. Again, VHF articles in QST pre-date anyone else's amateur-targeted publication.

>; And when that VHF
>: crowd began exploring FM: The FM and Repeater Manual. The very first
>: book in the 80s devoted to amateur digital comms was the League's Get
>: Connected.

No comment?

>; How in the world
>: could you possibly find fault with this business side of the League?

>I'm not finding fault, only your posting incorrect facts that they were
>the -ONLY- one doing it.

I'll stand by my claim that the League published topic-specific books (and articles in QST) targeting the amateur community first; SSB articles in QST appeared before Collins' book; VHF-related articles appeared in QST prior to any book published on the subject; antenna-related articles appeared in QST prior to any book being published on the subject; et cetera.

>: Ham radio and reading are inseparable; and it takes a business to do
>: what the League has accomplished.

>Yep, and others contributed to the effort also.

Yet, you'll almost always find that the League beat them to it, with its QST articles.

Amateur Radio Enforcement Bureau
FEDERAL COMMUNICATIONS COMMISSION
Gettysburg, PA 17325-7245
Dear Mr. Hollingsworth
RE: Amateur Radio Station W9ART
Mr. William E. Lauterbach, Jr., WA8MEA has stated the alleged incident he is complaining about occurred on Saturday, March 18, 2000. You, Mr. Hollingsworth,

stated on April 30, 2000 and again on May 7, 2000 in the Rain Report that the alleged incident occurred on March 8, 2000. So I ask you, what is the date this

incident allegedly took place? Was it on Wednesday, March 8, 2000 or was it on Saturday, March 18, 2000?
Lets give Mr. Lauterbach the benefit of the doubt here and call it March 18, 2000. For purposes of clarity, let's place all the dates in chronological order.
On March 18, 2000 I allegedly interfered with a conversation between Mr. Lauterbach, Mr. Michael DeWoody (N3GVA) and Mr. Mel Richardson (W8KBK). On April
19, 2000 Mr. Lauterbach signed his affidavit of complaint and on April 26, 2000

you Mr. Hollingsworth, sent me your letter and the affidavit. I received this mail on Monday, May 1, 2000 as your certified mail signature will bear out. OK.

From March 18, 2000 to May 1, 2000 I am now being asked to recall the specifics

of the evening in question. A fairly tall order as this time span is over six (6) weeks long. I'll be honest with you - I doubt I could recall details and specifics from a casual conversation I had yesterday let alone six weks ago! And
frankly, Mr. Hollingsworth, I'm not sure you could do this either. But I believe
if we look at the entire picture here of exactly what is happening with this affidavit, we will see that there is something much more cynical going on than just a complaint about interference.
Don't you find it a bit strange that Mr. Lauterbach took 32 days to file this complaint of interference against me? Now I wonder why he did that? Why did he take so long to file a complaint? If I felt my rights had been violated - I can

guarantee I would not take over a month to say so - to write my letter to you. I
would file my complaint IMMEDIATELY - while the details of that complaint were still fresh and true in my mind. I wonder what the police would do if a store owner tried to file a complaint of theft from their store on month after the fact? Why do I imagine they would scratch their heads and say, 'ok, now what's really going on here?'
Let me try and substantiate what I believe is really happening here. At this time I would like to direct your attention to an enclosure I have attached. It is an article written in THE IDAHO OBSERVER, a white supremacist publication and
dated September, 1998. The title of the article is "THE LIBERTY NET" SAGA and was authored by Bill Lauterbach. Mr. Lauterbach states I have had congressmen in
touch with me, that I have issued death threats to Liberty Net members and that

I have threatened federal agents.
Page Two
Mr. Hollingsworth
RE: W9ART Station
I have NEVER heard from my congressman on any issue let alone on 'jamming' or 'harassment' on 3.950 MHz LSB, I have NEVER made a death threat to any person, and I have NEVER threatened a federal agent! These statements by Mr. Lauterbach

are reprehensible and are made with the sole purpose of damaging my character. They are malicious and they are slanderous. Isn't slander against the law? The only time I have even met a federal agent was on Spetember (sic) 9, 1998. Agent

Harness came to my home to inspect my radio station. We actually had a nice visit and Agent Harness left my home on perfectly good terms with me.
Mr. Hollingsworth, as inane as this attachment may seem to you, it is important

to me that you take it seriously. I sent it because I believe it lends itself to
my suggestion that Mr. Bill Lauterbach's charges are not credible. He has been saying for a couple years now that in the end, he would 'get my radio license'.

That he would do whatever he had to do to remove me from the airwaves! He has said this on 3.950 MHz many times. Whatever he had to do! I believe that is why

he waited over a month to file the charges of interference against me - he knew

full well there is no way in the world I would be able to recall the details of

the evening! Isn't there a time limit a person has to file a complaint?
I want to share one other item with you which I believe lends credibility to my

suggestion that this is nothing more than a 'set-up'. The following is from the

LIBERTY NET MESSAGE BOARD and is entitled, WILL IT WORK AGAIN?
Posted: 5/2/2000 by Blood Bath McGaff
Wanted: "Immediate need for affidavit stating that on a date (as yet to be determined) KJI was in QSO with ART. Will trade for 3-500's or MD 20/20. More as

details become available."
Reply: 5/4/2000 by Ratfink
Do the 3-500's work? Full output?
And Deja.news reports on 5/6/2000: author: BurkSWL:
Castle and Visser have been nabbed this time. A sworn affidavit corroborated by

witnesses and two tape recordings from two different locations will either land

up in their punishment, or prove Riley to be a Clinton puppet.
And YCTHULHU replied to this entry: Yep, one wonders how Riley gets around in public dragging all those strings behind him.
Now, Mr. Hollingsworth, don't you find it strange indeed that on May 6, 2000, just 4 days after an offer of bribery is made, suddely 'proof' of this evening appears? Guess the donor didn't want the MD 20/20.
I am to understand Bill Lauterbach has had attorneys working for him on Liberty

Net problems for many years. Too bad Mr. Lauterbach didn't have an attorney to edit his article in THE IDAHO OBSERVER. He should have. Any good Attorney would

have told him what a mistake slander is. And any good attorney would have also told him to omit the comments he made suggesting 'when the federal system doesn't work for you, justice lies in your own hands - the hands of the Liberty

Netters.' Now that sounds like a statement meant to incite and meant to break the law to me.
Page Three
Mr. Hollingsworth
RE: W9ART Station
Mr. Hollingsworth, you have mentioned in your letter that my 'harassment' violates the rights of the Liberty Net. What about my rights? What happened to them? My occasional comment has been to call the Liberty Net the 'Great Liberty

Nitwit Net'. The Liberty Netters are incensed by this remark, but so what? This

comment is not profanity and it happens to be my opinion. I have also called the
Liberty Net members white supremacists. But this comment they like - they are proud of this. As a matter of fact, one of the Liberty Net members brags about the fact that he holds a higher-up position in the KuKluxKlan. The truth is that
what they are angry about is not my so-called harassment, but the fact that I do
not agree with them. And even the Liberty Net members would concede that they could not 'get my license' with the reasoning that I do not agree with their beliefs.
Some of the Liberty Net members have recently made mention of the fact that for

the last several months, the 'friendlies' have turned over the frequency to them
for their Saturday night net. And you, Mr. Hollingsworth, mentioned that even with the monitoring of 75 meters by the FCC, I have not been found to be interfering or jamming the frequency. Well, I have not been interfering with the

Liberty Net licensees. In fact, I am only occasionally on the frequency any more
at all.
Mr. Bill Lauterbach is persistent in his efforts to 'get my license any way he has to'. I do not believe Mr. Lauterbach has filed an honest complaint against me. And I believe the enclosure as well as my letter of explanation will corroborate this statement.

Sincerely,

Arthur D. Visser
W9ART
Enclosure

Only 55 US hams die per month? No, I don't believe that.

Considering that the current US ham population is several
hundred thousand (what is it now, about 600,000?), if the
statistics for hams is similar to the general population there
should be several times that many dying per month.

Or did you just mean ARRL members? That number still sounds
too low.

OTOH, if hams only die at the rate of 55/month we could promote
amateur radio just on its health benefits. :-)

The gun-control advocates can't and/or won't read.

They don't think, they just knee-jerk react to what their
liberal media ("God") says to them. AF2Y is a TV baby.

People wondered what too much TV would do to the human
psyche, and it's worse if there is a pre-existing condition.

Now society has to deal with him.

Sad.

Scariest thing is, is that soon, after the liberals undermine
enough of the fabric of this once great nation, we'll be soft
and worthless enough for some third-world extremist group to
have their way.

Every society must fall. For the US, it's folks like AF2Y that
are doing everything they can to make sure we do fall ASAP.

C'est la guerre...

Wouldn't surprise me in the least! Look at all the potential losses thru vast cross-country transmission lines, substations, and the full array of distribution systems, plus losses thru dirty insulators, radiation to earth, and LOTS of shorts to vegetation...

From: Stephen Saunders <kd6eut@utm.net>
Message-ID: <QB_Y4.16$Yu4.3212@news-west.eli.net>
Source record: 110071

Hello,

I'm trying to get a copy of the ICOM W32A Windows cloning software so I can program my ht. I still have the cable, but as many of you have experienced, I got pc's for my kids and all floppies and CD's went to the great floppy and CD heaven in the sky. Well, the real truth is I had the software installed on my pc and gave that pc to my oldest son so I could have a better pc. His pc has had Windows 98 reinstalled on it about 4 times due to the way he uses it. (Can't blame him).

If you have such a floppy, could you zip it and send it to me as an e-mail attachment? My e-mail is: kd6eut@utm.net .

I haven't been reading this newsgroup for a while. I wish I had the time to, but single parenting two teenagers is pretty time consuming. My wife is on assignment in Maryland at the Naval hospital. One more year of that is in store.

Regards,

Stephen Saunders, KD6EUT

I "think" at least kurpfuscher(af2y) read it. I received this from him.

<< This is an NRA sponsored bunch of written trash!
>>
and I respond ;
Not hardly. Kurpfuscher, you just won't face facts when they are presented to you. A research scholar from Yale, a Ph.D. at UCLA, a Fellow at Chicago U., a Fellow at Georgia U.
analyzed 18 years of data from 3000 countries. He's done the largest most comprehensive study on guns and crime to date and has concluded that "violent crime drops significantly when states switch from discretionary permit policies, which give local officials the authority to determine who may carry a gun, to "shall issue" or "right-to-carry" laws, which require that permits be granted to everyone who meets certain objective criteria. That conclusion, first set forth in a 1997 paper that Lott co-authored with David Mustard, now an economist at the University of Georgia, heartened defenders of gun ownership and dismayed their opponents. Arguing that "shall issue" laws are beneficial, while other gun laws are ineffective at best" Kurpfuscher, I don't think you have the credentials or the facts to dispute his findings, whether you like them or not they are the most comprehensive to date. Also Kurpfuscher, it doesn't take a Rhoades scholar to see the conclusion Lott came to are true. Attack it with rhetoric all you like. You cannot dispute it with facts. Better men than you have tried and his evidence, facts and findings hold up under scrutiny. They have tried eliminating countries, leaving out Florida, dropping only small countries, no matter what the liberals have tried to do with the facts and data, it still comes out to a DROP in crime rates over a variety of catagories.
Now go do the right thing !
KK7HO

Generally I find it difficult to understand what N3GVA is saying because of the difficulty he has with concise verbal communication. I am surprised that you were able to derive a logical point from his blatherings. It gets even worse when he starts getting sloshed later on in the evening. N3GVA may think that Hillary is a space alien and it's a matter of public knowledge what N3GVA does with small animals.

Ok, so I read it wrong. It's ONLY 260.1 BILLION Kwh lost in 2000 of 3.6 Trillion Kwh generated. Still, if one multiplies 260, 100, 000, 000 by my electric rate of 8c/kwh, it's a tidy little sum we ALL pay for continuously in that rate......

http://www.eia.doe.gov/emeu/steo/pub/10tab.html

I searched DOE for this and found way too many pages of bureaucratic text than I could digest. Every time I go to a different place, I get wildly varying statistics, of course, depending on whether you want to make Big Power look real good or want it real bad......

I don't think they really know, or actually care, because the consumers pay the bills.....

Larry

>And they just reported that WWII aged veterans were dying at a rate of
>1000 per week and the national cemeteries are filling up. Guess the Army
>and the ARS are both bad bets. Wonder how scared the VFW is (using the
>same logic as the original poster) about their decreasing numbers.
>
>Maybe if we had a few more wars, they could promote and increase
>membership???
>
>Who knows, if G. W is elected, he could send a few 100k to the middle
>east just like his old man, so that the Tx Oil Barons can keep their
>restrictive club memberships current.

I'm usually a democrat but George W senior recognized the fact that
this *whole* country runs on *oil* . if Saddam got control of the

middle east oil fields can you say USA = 3rd world nation ?
